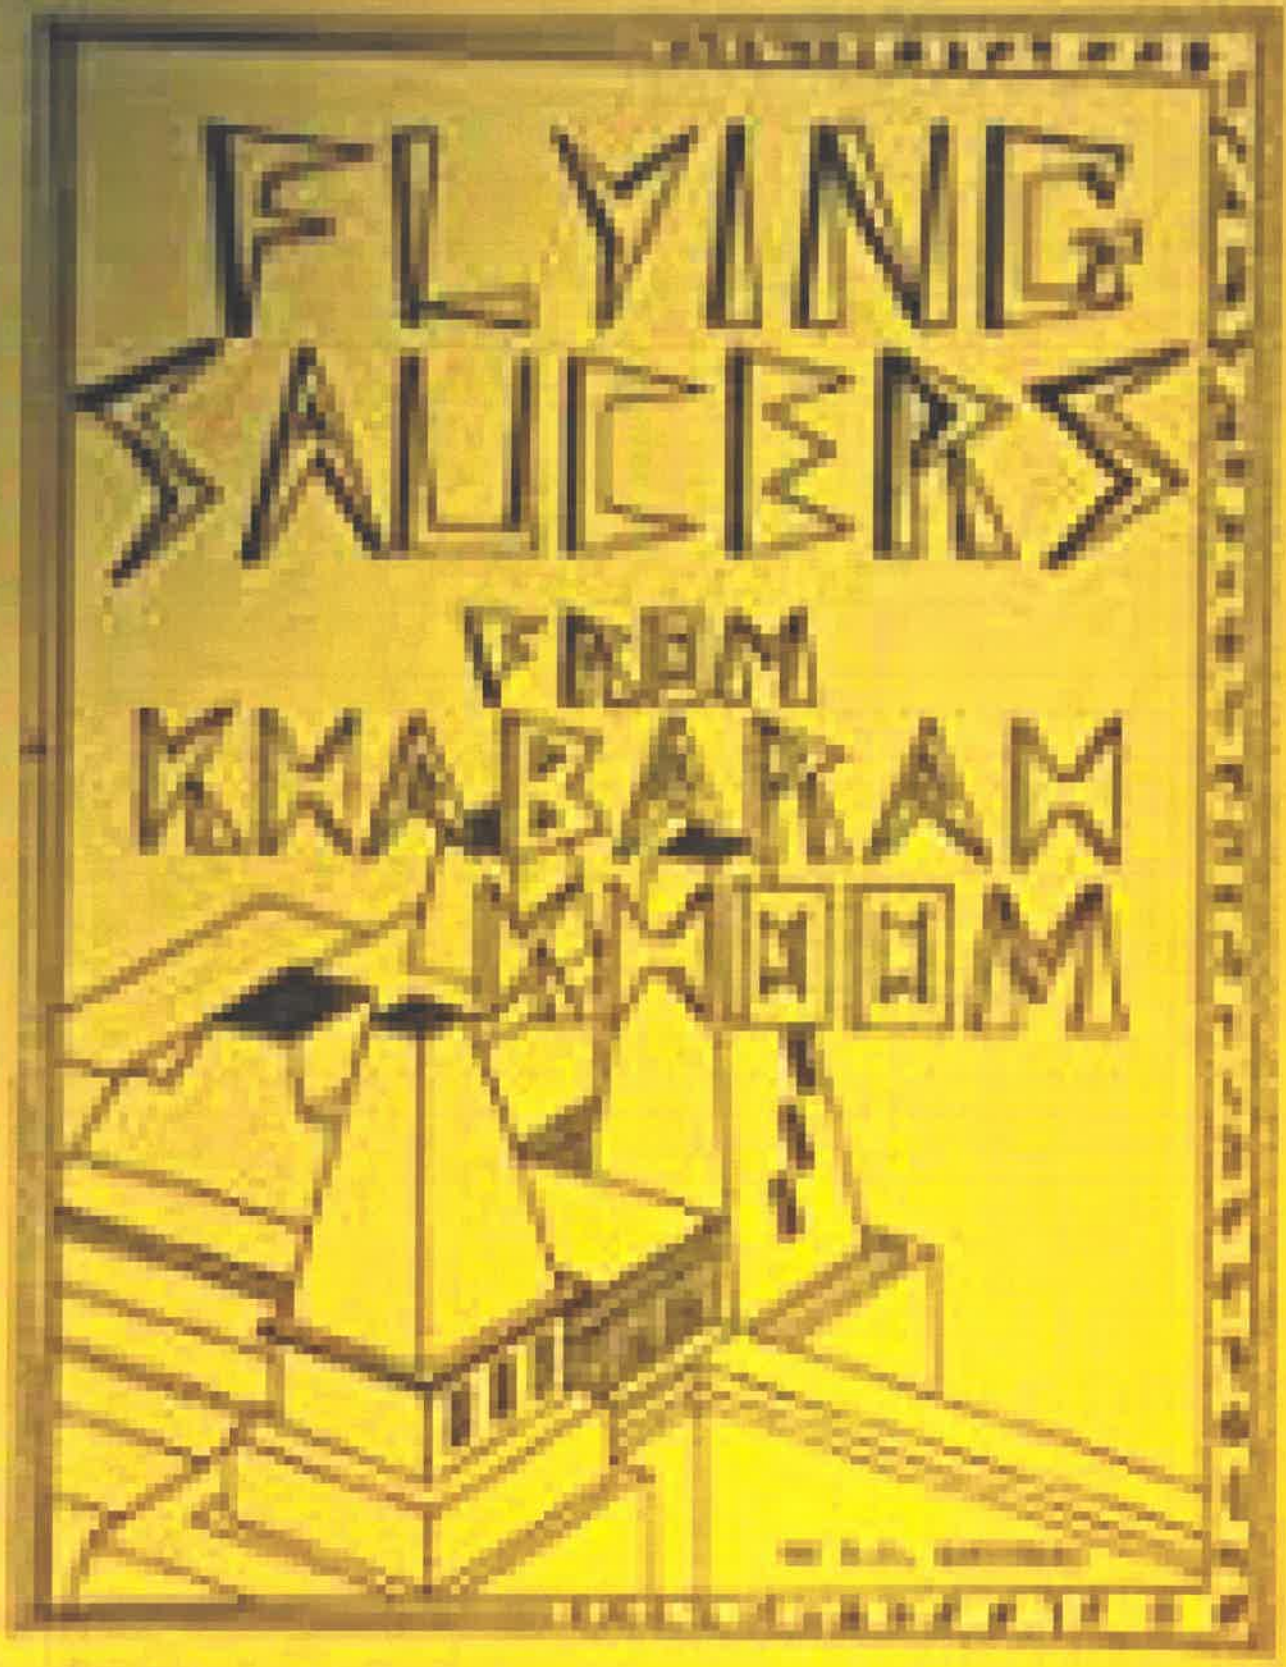
FLYING SAUCERS FROM KNABAKAM



Hollow Earth Compendium

Dear Fellow Truth-Seeker,

Welcome to the Hollow Research Society (HERS) formally known as the International Society for a Complete Earth. (ISCE)

We have long proposed a plan to reenact Admiral Richard Evelyn Byrd's exploration to the North Pole. You may well imagine that our proposed reenactment of Admiral Byrd's 1926 North Pole flight requires major funding, sponsorship and a host of other dedicated individuals and volunteers. This is an enormous undertaking with many logistical considerations and is one of our objectives and purpose of HERS because to this day to this day, the controversy amounts. Allow me to take you back in time.

My invitation to Ohio State University by Admiral Byrd's daughter

Dr. Raimund Goerler, Ohio State University archivist from the Byrd Polar Research Center claims to have found the long-lost diary. Dennis Rawlins is an astronomer who, after examining it, announced that the famed American explorer Admiral Richard E. Byrd, who claimed to have been the first person to fly over the North Pole in 1926, failed in his attempt, missing his destination by 150 miles.

How ironic were those ten years before the archivists' and the navigational experts' claims of discovery, for it was Ritter von X who told me that ***"In the near future, even the late great polar explorer, Admiral Richard E. Byrd, will be utterly discredited for his discovery of the North Pole."***

It was Ritter von X who gave me a copy of the alleged secret missing diary in the early eighties. It was titled The Flight to the Land beyond the North Pole or Is This the Missing Secret Diary of Admiral Richard Evelyn Byrd? With his permission, I reprinted the diary in 1990.

Two years later, I was contacted by Bolling Byrd-Clark, the daughter of Admiral Byrd. She told me that she remembered her father talking about his diary when she was as young as eleven years old. ***"It is lost, stolen, or has disappeared,"*** she said. That is how we met.

Hollow Earth Compendium

Twenty-Five Years Later Here We Are

Our latest and recent updates include our new store front. A donation page has been added and we can accept various currencies from contributors from around the world including BITCOIN and other crypto currencies to follow.

Now available at a small cost is our easy downloadable e-books, Reports and a password protected Vimeo site of our video, Journey to the Hollow Earth.

We appreciate your support. Ten percent of all proceeds and donations are sent to Polar Bears International and will add to the needs of our furry friends of the far North. **http://PolarBearsInternational.org/**

Please visit and sign-up for our free Hollow Earth News and Commentary at **www.HollowEarthReasearch.org**

Our current project is to produce our two multi-award worldwide winning sci-fi/adventure screenplays and with its success can finance future projects of HERS.

A business plan has been prepared for interested producers and investors for review with a guaranteed international distribution.

Please visit the following sites for more information and updates about our feature films in pre-production. **www.HollowEarthQuestMovie.Com** and **www.EscapeToHollowEarth.com**

For direct contact please email Dan at **danweiss777@gmail.com**

Thousands of people throughout the world continue to this day to research this subject unabated for many years. In addition, many accredited researchers, investigators, authors and scientists including thousands of individuals of all walks of life have compiled masses of information, literature, tapes, books, scientific research and so on.

For an example, take yourself. How did you first hear about the theory of the Hollow Earth? What intrigues you about it? Do you want more information? Did you receive this information from a friend, or perhaps by a metaphysical contact? Do you have sufficient or conclusive evidence proving this theory? Do you believe the Hollow Earth exists? Does merely believing support the facts? What, in your estimation, constitutes fact? Can anyone say with irrefutable proof that the Earth is hollow? Does your religious faith support a paradise world or an inner earth? Do you think UFO's come from the interior of the Earth?

The possibility, coupled with so much corroborating data, is strong enough to support the inquiries on the subject. But as a researcher or investigator, are you completely satisfied with all the information and materials that have been brought to your attention by your own efforts? Participation in this organization is an attempt to go beyond the theory itself. A theory does not determine fact but produces an educated guess about the possibility—all brought about by researchers from all walks of life and professions. The facts remain to be verified.

Hollow Earth Compendium

If you knew for certain that the Earth was hollow and inhabited by a superior strain of beings that are thousands of years advanced in technology, science, and mathematics, in an environment that supports life indefinitely, would that change your life and the world in which you live?

Do you really think the thousands of UFO sightings the world over actually come from far distant galaxies light years away? Perhaps.

However, the question remains: Are UFO's zooming in and out from within our own planet? Remember Travis Walton and his movie Fire in the Sky? One of the most credible abduction cases in UFO history? I met with Travis at a luncheon along with Kathleen Marden, Stanton Friedman and Grant Cameron in May of 2015 at McMinnville, OR UFO Fest. Travis told me about a scene that was not part of his movie, just before he found himself back in Arizona calling his mother from a phone booth. He recalls being in a large cavern noticing other craft around him while tall beings of a Nordic features escorted him to a craft and sent him back home.

The True Story of Travis Walton, recent documentary trailer: https://youtu.be/6HjC28s_5nQ

Millions the world over has heard of or familiar with the Hollow Earth theory either by legend or by their own origins and cultures. One of the most popular books regarding the subject was written by Dr. Raymond Bernard, The Hollow Earth published during the sixties. There is a host of books written and being written about the subject. Many are now available on our site in a downloadable pdf form.

Dr. Bernard has dedicated his book to the future explorers, who hopes will actually discover it. It is the Hollow Earth Research Society's intention to become these new world explorers.

This is a personal invitation. It is for those individuals who want first-hand information about an ancient mystery that has been with us through the ages of time.

HERS mission is to provide articles of interest, new information and research, photos, opinions, and resources and is a clearing house for information dedicated to seeking the facts. This is the vehicle to disseminate that information and plan an exploration. The organization will keep you informed of the progress of our projects as they develop.

Our first such proposal is the reenactment of Admiral Byrd's 1926 flight to the North Pole. Where we collectively investigate and explore the possibility of a Hollow Earth and its surrounding mysteries including today's controversial flight whether Admiral Byrd in fact reached the North Pole.

In Admiral Byrd's book, Skyward, written in 1929, just two years after his flight to the North Pole, he also refers to his diary and its contents. Few people knew of his diary until Ritter von X gave me a copy for publication. Since then the alleged diary has found its way through many avenues and available on the internet. But that is only part of the story and a lot more to be told.

In April of 1996, at the invitation of Bolling, I attended the first Byrd Polar Research Colloquy. The meeting, held at the Byrd Polar Research Center (BPRC) at Ohio State University, was both the seventieth anniversary celebration of Admiral Byrd's 1926 flight over the North Pole and also celebrated, was the 50th anniversary of Operation High Jump, the code name for Admiral

Byrd's South Pole expedition. Attending the conference was a vast array of scientists, researchers, historians, explorers, and other enthusiasts interested in sharing experiences relating to exploration of the earth's Polar Regions.

Ed Hayes, the university's vice president for research, opened the meeting with a presentation of his views on university participation and the BPRC's impact on future polar research.

Other speakers from OSU, alumni, and invited guests lectured on the latest evidence of global warming and discussed the long-term effects of it on the fragile polar environments. Colleagues who had traveled with Admiral Byrd on various missions between 1939 and 1955 featured well-illustrated presentations recalling their memorable and daring exploits in some of the harshest regions on earth. New laboratories, archival facilities, and books were all part of the first Colloquy. Discussions ranged from first-hand experiences with Admiral Byrd to forays into the most remote, inaccessible, and environmentally harsh regions to scientific prognostications by the multinational and multidisciplinary scientific teams at the Byrd Polar Research Center. Data gathered from recent expeditions, using state-of-the-art research tools, have enabled scientists at BPRC to measure the latest projections and effects of population growth, cumulative environmental pollution, and global cycles of continental plate motion, glaciations, and meteorological change.

Other keynote speakers were Dr. Leonid Polyk, BPRC member and curator of the Marine Sediment Core Repository and Col. Richard Lockhart (retired), who recollected his involvement with Operation High Jump, of which he was a participant. Dr. Richard B. Alley a BPRS alumnus, lectured about abrupt climate change during the end of the ice age. A book-signing party was held in honor of Sir Charles F. Passell. His book, Ice, was available for purchase at the conference.

One of the most curious comments came during the archivist Dr. Raimund Goerler talk on his recent discovery about Admiral Byrd's missing diary. North Pole researcher Charles Passel interjected his thoughts.

He said, ***"The facts were verified by a Swedish expedition that discovered tropical plants and trees floating in fresh water. The expedition also found a slight curvature the farther north they traveled, and even suggested the possibility of a Hollow Earth."***

Needless to say, laughter rippled through the audience. Bolling kindly interrupted and silenced their laughter and ramblings as she stood drawing the attention of everyone within the conference center to herself while others remained hushed and said, ***"Well, I think it's best that we just have an open mind here today."***

I, myself, remained quiet, smiled at Bolling, and simply listened carefully to the various reactions of the professional scientists and others who knew the Admiral personally who have been with him on his Arctic and Antarctic expeditions.

Saturday's speakers featured Dr. Garry McKenzie and Dr. Ingrid Zabel from the Massachusetts Institute of Technology, who lectured about her radar video (one-year time-lapse photography of the conditions at the South Pole.) Dr. Zabel's impressive presentation revealed a strange

phenomenon that showed what appeared to be a small black hole in the sky that became a large black space and then disappeared. Her only comments concerned the position of the camera during the radar video recording.

Dr. David Bromwich, senior research scientist associated with the Polar Meteorology Group and member of the BPRC, gave an eye-opening speech and discussion regarding the global impact of polar processes. Captain Brian Shoemaker from the American Polar Society delivered a very informative speech concerning the Antarctic Treaty and the future of Antarctica.

During the final lecture of the conference, Dr. Raimund Goerler, university archivist from the Byrd Polar Research Center, created great controversy and an ensuing debate when he officially announced his startling discovery of ***"new evidence"*** regarding Admiral Byrd's North Pole diary. Goerler explained that Byrd was approximately 150 miles south of that pole when his attempt failed. The information was based on penciled and erased notes that Goerler discovered in January of 1996 in the university's library.

In The Polar Times, published by the American Polar Society in the fall–summer of 1996, archivist, Raimund Goerler, claimed that Admiral Byrd's diary proves that he missed his mark.

Did Admiral Byrd fail to reach the North Pole?

"Famed American explorer Admiral Richard E. Byrd, who claimed to have been the first person to fly over the North Pole, may actually have turned back too soon, missing his destination by about 150 miles."

So begins an article by the Associated Press on the conclusions of Dr. Raimund Goerler, chief archivist of the Byrd Polar Research Center.

The article went on:

The research center, located at the Ohio State University, is home to many records, artifacts, and other historical data related to polar research Goerler claims that earlier this year he found Byrd's long-lost diary in a mislabeled box of Byrd's memorabilia. A later interpretation of the diary's navigational notes by Dennis Rawlins, a Baltimore-based navigation expert and polar expedition historian, led Rawlins to believe that Byrd failed to reach the North Pole, even though he claimed to have reached it.

A passage in the Byrd diary allegedly portrayed an erased, but still readable sextant recording that may have put Byrd about 165 miles south of where he claimed to have been later in his official report. Goerler claimed that neither he nor the Byrd Polar Research Center endorses Rawlins' findings. Goerler said Rawlins' conclusion was based on a sentence written by Byrd stating ***"we should be at the pole."*** To Rawlins, the word ***"should"*** implies doubt about an achievement that would, upon return, be asserted as a certainty. If Rawlins' interpretation is confirmed, then Byrd would lose his standing as "first person to reach the North Pole," to Norwegian explorer Roald Amundsen, who traveled over the pole three days later, on May 12, 1926.

Rawlins did claim that the diary does establish that Admiral Byrd and his pilot Floyd Bennett did indeed leave Spitsbergen, Norway, and attempted [to reach] the pole by flying some 600 miles over the ice in a trimotor Fokker. But Rawlins claim is that Byrd's diary is not consistent with the Admiral's making it all the way to the North Pole.

The Polar Times headline reads:

"Examination of Admiral Byrd's navigation on his flight to the North Pole,"

By William E. Molett, Lt. Col. USAF (retired)

A long-lost diary of Admiral Byrd was found recently by Dr. Raimund Goerler, archivist at the Byrd Polar Research Center in Columbus, Ohio. On page eleven of this diary is an erased figure which can just be made out to be what a sextant altitude is, apparently. Based on an analysis of this single erased figure, Dennis Rawlins has announced to the world that Byrd made a fraudulent claim to have reached the North Pole. According to Rawlins, Byrd was 146 nautical miles short of where he thought he was at the time of this supposed sextant observation and, continuing on, he turned around over 100 miles short of the pole.

This author [Lt. Col. William Molett] maintains the erased sextant reading was just that—a figure that Byrd did not use because he knew it was incorrect.

Richard Byrd took and recorded a sextant reading of 18 degrees, 15 minutes, and 30 seconds at Greenwich Civil Time of 7 hours, 7 minutes. For the same time at another place in his records, he recorded an altitude of 19 degrees, 22 minutes, and 14 seconds. The 19+ degree altitude has been erased but still can be read. If this erased figure was a true altitude at the recorded time, then Byrd speeds up to this time and all ground speeds and sextant readings after this time. If this erased figure is ignored, then everything he wrote about the trip appears to be genuine. In using a bubble horizon sextant, it is essential that the plane is flying straight and level at the time of the observation. Even small turns with the aileron or rudder can make for large errors in the sextant reading. For several years,

Byrd had used this sea sextant, which he had modified for aerial use. In the air, because of aircraft motion, a single reading of the sextant cannot be relied on for accuracy. In the case of the 7:07 reading, the pilot (Floyd Bennett) may have made a small turn to correct course, perhaps without even realizing he had done so, and caused Byrd to make an erroneous reading. When Byrd wrote down the 19+ altitude, he realized immediately from his position that it was wrong, and probably went back to an earlier reading of the set of readings [and] erased this error. It is also possible that he first misread the altitude and then with another look at the sextant, corrected the reading; this is a normal procedure to check one's readings.

Whatever the reason, this erased altitude was not used by Byrd. All of the other readings were taken with apparently excellent accuracy. Byrd reported the air was not bumpy. The air over the Arctic Ocean is the smoothest in the world. There are no mountains to give up and down movement the air, and with the sun shining 24 hours a day, night temperatures and day temperatures remain much the same, which also contributes to smoothness in the air. Byrd's

sextant readings seem almost too good to be true, but smooth air and careful observations of the sun would give him pretty accurate readings.

The erased sextant reading in Byrd's diary played no part in Byrd's navigation. This author is awed by Byrd's careful planning and execution of his first flight to the North Pole. He went north on the 11E meridian. He planned his takeoff time to give him his course by the sun lines in the mid-portion of the flight and latitude by sun lines as he approached the Pole. About one hour after he started south, the sun crossed the 15E meridian directly at the sun. The sun's shadow was directly down the middle of his sun compass, indication he was exactly on his desired course. That he was and remained on his course was confirmed when, at about 120 miles north of Spitsbergen, he spotted Grey's Point almost dead ahead.

Byrd helped design the drift meter he used for drift and ground speed, [and] it is inconceivable that he could travel for nearly six hours and not detect that his actual ground speed was only 53 knots when he consistently computed it to be around77 knots or higher.

Byrd made huge contributions to naval aviation and aviation in general. He was probably one of the ten best navigators in history.

When he said he reached the North Pole in his tri-motor aircraft, you can believe it despite the criticism by non-navigators.

The following is from those who knew Admirable Byrd.

To the editor of the Polar Times: The last time Dennis Rawlins purported to produce irrefutable evidence that an explorer had lied about his feat, the evidence turned out to be only the serial numbers on Admiral Peary's chronometer. Rawlins goes to great lengths to debunk the extraordinary accomplishments of famous polar explorers.

—Gilbert M. Grosvenor
Chairman of the Board
National Geographic Society

The accomplishments of great men are often belittled by would-be heroes who present the negative side of life instead of the positive. The media finds it so easy to criticize and difficult to compliment. Admiral Byrd's story and reputation of being a good leader, a good navigator, and a good explorer has been questioned by individuals who strike below the belt.

Will the professional disparagers of the future try to negate the flight to the moon as they have targeted the life of Admiral Byrd, especially the flight to the North Pole? For four years I worked for Admiral Byrd—to train his sledding teams, to accompany him on his first Antarctic expedition (1929–30), to prepare his supplies for the second expedition (1933–34), and to accompany him on many of his fundraising lectures. At no time did I find him a liar or even drunk as reported in the New York Times on 12 May 1996. On the contrary, he was always a gentleman, lived up to the good name of the United States Navy, was proud of his family, and more than anything else was an inspiration and strength behind all Antarctic exploration, discovery, and scientific development. By his leadership and selection of good

men like Dr. Lawrence M. Gould of the University of Michigan senior scientist and second in command of the first Byrd Antarctic Expedition recorded the geographical results of the Byrd Antarctic Expedition. Admiral Richard E. Byrd's place in the world's history of exploration is at the top.

—Norman D. Vaughan

I have read the article in the New York Times disparaging the character of Admiral Byrd. Having been a member of the Byrd Antarctic Expedition II, 1933– 35, as a seaman on the BEAR, I say it is a lot of baloney. Fear of flying!! Many people today would fear flying in the Arctic and Antarctic with equipment likely to fail, no Navy help, no reliable weather route and no backup aircraft to search for him if he was forced down. He made the flights in spite of these possibilities. If he was afraid of flying, he never showed it. Terrible navigator!! He was the foremost navigator of his day, a man who did a lot to advance aviation, as well as explore the Polar Regions. With his primitive equipment he found his way out and back to safely. What is so terrible about that? Did not pilot his plane!! Amundsen, Ellsworth and Wilkins did not pilot their planes. All of them picked the best pilots they could find. What's wrong with that? Byrd bashers should try to duplicate his accomplishments before they try to criticize him.

—Gordon Fountain

On 24 May 1996, please note the partial letter of thanks I received from Ken Jezek, Director of the Byrd Polar Research Center for joining the celebration.

Dear Dan,

Thank you for joining us in the celebration of the 70th Anniversary of Admiral Richard E. Byrd's flight to the North Pole and the 50th anniversary of Operation High Jump this past April. This meeting at Scott Hall on the Ohio State University campus was our first attempt to bring together historians, scientists and explorers, logistical teams and enthusiasts to share interest in exploration of the earth's polar regions The Colloquy assembled several generations of scientists, explorers, novices and experienced experts, for talks and tours, combined with comfortable chats at the icebreaker, the banquet, and the barbeque…

…On behalf of the Byrd Polar Research Center, we thank you for showing an interest in the activities of the Center, and we look forward to seeing you all at the second Colloquy.

Sincerely, Ken Jezek Director

Memories from the Byrd Polar Research Conference

The following are some of my personal memories from the Byrd Polar Research Conference. After the conference, Bolling invited me to dinner along with the Byrd Polar Research members. The get-together included her family members, Bolling's sister, Catharine Byrd-Breyer, and nephew, Leverett Byrd.

I was fortunate to be seated between Bolling and her nephew, who, incidentally, looked identical to a younger Admiral Byrd.

As we began to dine, Bolling offered a toast, saying, ***"Here's to the old man, himself"*** in what indeed was a tremendous reunion of family and history as well.

During the dinner, I had the honor of being introduced to the group by Bolling as a longtime acquaintance of hers, as well as an advent researcher of her father's history and explorations whose interests also included researching the theory of a Hollow Earth.

Bolling continued, emphasizing her belief that an open mind was essential regarding the Hollow Earth theory. I had the wonderful opportunity of formally addressing many questions posed by the other guests. I shared Icelandic and Tibetan legends and spoke of my many journeys to Iceland, where, for a time, I had made my home.

My discussions varied about my visits to Iceland and spoke about my visit with the Nobel Prize winner of literature, Halldor Laxness, Svienbjorn Beinteinsson, known as the King of Iceland to many Icelanders. I elaborated a little more about my visits that included an invitation by the Icelanders and met with President Gorbachev at a speaking engagement during the Reagan summit meeting in Reykjavik in 1986.

I moved on speaking about the legends of Odin and Thor, such as, Odin who represented the All-Father God who dwells in the center of the earth. I warmed up to the well known Icelandic legendary world called Asgarth, and spoke about Odin's legendary son, Thor who dwells in the Citadel of the Gods and that the Icelanders to this day celebrate Thor's Day as a yearly celebration.

The waiters continually refilled our glasses with wine as they moved around the table in a clockwise direction while the discussions carried into the late hours of the evening. At which time no one in attendance denied the possibility of a Hollow Earth. Their interest was especially piqued about my mysterious conversations and acquaintance I had with Ritter von X regarding his knowledge and experience about the hollow earth and his special interests and information about the Admiral.

This included his amazing experiences and rival from the interior of the earth, a Flugelrad (UFO) flight commander, who he referenced as a friend to humanity. I spoke about his involvement and whereabouts during his U-Boat trips to Antarctica after the close of the war and just before Operation High Jump were launched.

This was the moment when Bolling followed up with a written consent and the first to endorse my proposal and reenactment of her father's 1926 North Pole flight.

Amelia Earhart came up during the round table discussion, ***"While she got all the attention about her whereabouts over the last several years and since she was a great supporter and friend of the Admiral a reenactment sounds as viable and of equal importance."***

They were especially intrigued when I shared with the University quests, Byrd family and friends that Ritter Von X predicted this very moment to me years before, and said; ***"Even the late great Polar explorer Admiral Richard Byrd will be completely discredited discovering the North Pole"***

I was there and witnessed the whole event and prophesy among the Admiral's closest family and friends. The next day an announcement was made and this message went viral by the Associated Press and throughout mainstream media that Admiral Byrd was discredited reaching the North Pole.

To The Pole

A couple of years later, Dr. Raimund E. Goerler's book, To the Pole were published February of 1998.

The Diary and Notebook of Richard E. Byrd, 1925-1927 is the transcription of this diary along with Goerler's analysis and commentary. Byrd's claim that he was the first to fly over the North Pole in 1926 is the most controversial accomplishment of Admiral Byrd's career.

Dr. Raimund E. Goerler, University Archivist, discovered Byrd's handwritten diary and notebook during the processing of the Byrd Papers and found Byrd's long lost diary in an undisclosed location in an old trunk at the Byrd Polar Research Center at Ohio State University.

"It is a measure of the enduring fame of Richard Evelyn Byrd that nearly 72 years after he claimed to have been the first man to fly over the North Pole, scholars, navigators and polar explorers are still arguing over whether he actually made it. . . . To the Pole . . . helps to penetrate some of the mythology shrouding the Byrd persona, and both supporters and distracters of Byrd will relish it. . . . It makes some long-standing questions seem all the more fascinating."

—New York Times Book Review

On May 9, 1926, Richard E. Byrd announced to the world that he and copilot Floyd Bennett were the first to fly an airplane over the North Pole. Documents published here for the first time provide new insights into this most controversial accomplishment of Byrd's career.

To The Pole presents transcriptions of Byrd's handwritten diary and notebook, which were discovered by Ohio State University archivist Raimund Goerler in 1996 when he was cataloging Byrd's papers for the university. In his diary Byrd recorded his preparations for the North Pole flight, and he used it as a message pad to communicate with his pilot when the deafening noise from the plane's engines rendered verbal communication impossible.

Byrd also wrote his navigational calculations on the leaves of his diary, and photographs of these crucial pages are presented in the book as well, along with a copy of Byrd's official report on the expedition to the National Geographic Society.

Also included in the book are portions of the diary dealing with Byrd's earlier expedition to Greenland and his flight across the Atlantic in 1927. Goerler has written an introduction and epilogue providing historical context for Byrd's achievements and biographical information on the rest of his extraordinary career. The volume is illustrated with maps and a number of photographs from the Byrd archive.

Hollow Earth Compendium

We invite you to the first-ever Hollow Earth Convention and proposed reenactment of Admiral Byrd's Flight to the North Pole

Captain John Cleves Symmes's Globe

John Cleves Symmes's handmade wooden globe shows the earth's interior and accessible through the vast opening at the poles.

The first stop and proposed itinerary is planned for Washington, DC, at the Smithsonian Institute.

Did you know that the Smithsonian Institute was founded because of the United States expedition of 1838–1842 led by Lt. Charles Wilkes? A short film in the Natural History Museum gives visitors a history of the expedition from its origins early in the nineteenth century. It embraces John Cleves Symmes's belief in a Hollow Earth. His wooden globe illustrates his "Holes in the Poles" theory. His ideas were not widely accepted, but his call for an exploratory expedition was supported by New England whaling and commercial interests, patriotic citizens, and naval officers. Congress authorized a Pacific exploration in 1828. After a decade of controversy and planning, the ship sailed from Hampton Roads, Virginia, on August 18, 1838.

Do you have something to share? HERS and the Conventions Committee in Hamilton, Ohio, have made contact to plan the first world wide ***"Hollow Earth Convention"*** in honor of Captain John Cleves Symmes.

The director of HERS encourages all those who may wish to participate and/or contribute to the effort to contact him. If you have any special research, workshops, presentations, stories, artifacts or anything you wish to share or would like to be a part of the convention, either as a contributor or a visitor, please contact HERS. HERS will respond to all those who contact the director with continuous updates regarding the progress of this proposed convention.

There are literally thousands of dedicated researchers, UFO organizations, scientists, pilots, Muslim and biblical scholars, authors, university professors, and many psychics, metaphysical

people and others of all walks of life around the world have something to share about the theory of a Hollow Earth.

Why Hamilton, Ohio?

In 1826, Hamilton, Ohio resident Captain John Cleves Symmes developed the hollow earth theory. In fact, he further regarded the theory as the "Concentric Ring Theory." He was an ex-army officer and a businessman. He believed the theory in nearly the same way Dr. Raymond Bernard except for his "Concentric Ring" explanation.

Symmes dedicated most of his life advancing his theory and raising money to support an expedition to the North Pole to find the entrance to the hollow earth. In 1818, with a number of growing enthusiasts, Symmes shared his ideas while on an international lecture tour. In a letter addressed to "All the World," and directed to various publications, politicians, learned societies, and heads of state throughout America and Europe.

Following is an article from the Hamilton's Journal News, written on March 14th, 1991. It describes a gathering of a group of Hamilton civic and city officials who sheltered themselves from the icy rain with umbrellas as Sonia August, chairman of the restoration project for the John Cleves Symmes Hollow Earth monument delivered a few remarks at the memorial's rededication.

Hollow Earth Solidarity

"About 80 people greeted the official return of the Symmes Monument as Historic Hamilton Inc. re-dedicated the 150 year-old grave marker. The monument has been under reconstruction for about 8 months and was returned Monday from Hamilton sculptor, Edgar Tafur. Tafur used copper tubing to reinforce the sphere on top of the monument and the corners and resurfaced the foundation. Workers hoisted the monument back onto its resting place earlier this week. Representatives for Historic Hamilton Inc. and from the neighborhood spoke following the dedication by Historic Hamilton's president, Nancy Tryloff. Susan Vaalere, co-chairman of the restoration project, gave additional history about the graveyard and Symmes' theories. Hamilton mayor, Adolf Olivas also spoke, saying that although Symmes' theories seem farfetched to the present generation, ideas just as far-fetched circulate today. "Having the monument here brings further shine to Hamilton's star," he said, "and we'll do our best to make sure, for the next 100 years, that it is preserved."

It was only after his death that one of his ardent followers, a newspaper editor named Jeremiah Reynolds, helped influence the US government to send an expedition to Antarctica. The idea gained support by President John Quincy Adams and, in 1828, Congress approved the expedition. The ship sailed in 1838. The artifacts from this expedition became the foundation of the Smithsonian Museum in Washington, DC. Is it ironic that our national museum was founded as a result of a congressional order to search for the entrance to the ***"hollow earth?"***

As mentioned, HER main objective is to prove or disprove the Hollow Earth theory. If you wish to be involved in this project by participating in the proposed journey and/or the ongoing research, you are invited to combine your interests with HER's. We encourage you to visit our

website, and to share your questions, comments, and assertions. The second stop we have planned will be Reykjavik, Iceland, which, interestingly, was the setting for Jules Verne's novel, Journey to the Center of the Earth. We will also visit Mt. Snaefellsjokull, where the famous movie was filmed. We will visit museums and explore the Nordic legends of Odin, Thor, the Valkyries, and Asgarth, the Icelandic legendary city in the center of the earth.

Second Stop - Reykjavik, Iceland

Further, we will explore how World War II German leaders were inspired and perhaps driven by these legends, and we will examine how German composer Richard Wagner's research on this topic profoundly influenced his epic four-opera cycle, The Ring of the Nibelung. Third, the actual flight to the North Pole will originate from Spitsbergen, Norway, as did Admiral Byrd's. We cannot predict what will be seen and experienced. It will be an attempt to gain independent verification of Admiral Byrd's lost diary contents, and give those interested a first-hand experience to make their own judgments on the subject.

Our base camp at Spitsbergen, Norway

This reenactment journey will be an attempt to verify the recent claim that Admiral Byrd missed the North Pole altogether and to clarify the mysteries that have shrouded him for over fifty years.

Care to have a great adventure that may be "out-of-this-world" in the real sense? We invite you to join our research team — we hope to hear from you soon.

This is where the story ends and the journey begins.

PUBLISHER'S NOTE

Of all the persons I have known in the course of my UFO interest, certainly one of the most fascinating and intellectually rewarding has been Dominick C. Lucchesi, whom I met early in my own research while we were members of the International Flying Saucer Bureau (IFSB).

Even in those early days he was intrigued by theoretical explanations of UFO origin, construction and purpose, and one of the first persons to develop an open mind to unorthodox theories.

I might not have ever met him personally had not Albert K. Bender, the director of the IFSB, suddenly closed the organization, claiming he knew a frightening "solution" to the UFO mystery. We worked together trying to fathom what actually had happend to Bender.

I found Dom not only to be a brilliant electronics theoretician and technician, but also able to explain complex theories of physics in the lay terms I could understand.

After a couple of years I developed some business interests which took time away from my UFO research, and Dom got a deserved promotion in the aero-space firm where he was employed. Our phone conversations and letters grew less frequent. I sensed that his new duties, which took him out of town frequently, were quite demanding, as were my own. Although I never questioned him about his new duties and he never volunteered to describe them, I assumed they involved security clearances, since his employer did military contracting. I also found it awkward to discuss high technology, particularly as it might apply to UFO propulsion, for it was rumored that his firm had a grant to conduct "gravity" research. His position also involved some executive duties, and I assumed he might not wish to be publicly associated with "Flying Saucers," a subject then even more than now associated with crackpotism by many people.

During 1981 I began hearing from Dom once again, when he began sending me short manuscripts containing interviews between two people discussing the UFO subject. I am afraid I paid little attention to these at first. But later, when I dug them out and mentally put them together, I was amazed at their total effect in developing a fresh theory of UFO origin and purpose of which I had never conceived previously.

Early in 1983 Dom took early retirement from his employment to do private consulting and to pursue some of his personal interests, one of which, of course, was the study of UFOs.

During his new freedom he put together the manuscript you are about to read. I ask only that you read it, as I did, from the beginning, with an open mind. What you make of it is up to you.

After more than 35 years nobody that I know has been able to "solve" the "Flying Saucer" riddle, although all of us have waded through hundreds of books and articles expressing varying viewpoints. Neither Dom nor his unusual informant claim to "solve" the mystery completely, but they may dispose of a good chunk of it! Whether or not you find it valid, you must admit that the author gives us a scenario which may represent a logical explanation of UFOs!

If you do not have a technical education, please don't dismay of reading this manuscript. I don't know how to wire a living room lamp and I found it extremely easy to understand, excepting for a few pages of technical explanations and documentations which will be of particular interest to those who are able to evaluate it from that viewpoint. Dom has isolated these technical parts into brief sections which you can easily skip if you are, as am I, an "electronics illiterate."

I won't try to summarize the contents here, for the manuscript develops its amazing credibility by beginning on a level we can immediately accept and gradually, page-by-page, developing its highly unorthodox premises, which we might tend to immediately reject were all of this sprung upon us suddenly. For that reason I again urge you to read it from the beginning. If you try to "skim" it you may end up more confused

than enlightened.

No doubt it will cause much controversy among UFO enthusiasts. And it will raise a number of questions it does not answer. Such a question brought to my own mind: "Is it literally 'true'? Does his informant really exist as a real person?" Reports from independent sources confirm that during the claimed period for interviewing his informant, Dom did make many weekend trips to Pennsylvania. A fragmented manuscript which I have appended on my own volition indicates that Dom may have shared some of his findings with its writer, who attempted to confirm it independently.

Or does Dom "invent" or alter the identity of his informant to allow Eone to mouth the words which actually originated from other sources which he is not at liberty to quote, either because of personal or security considerations?

What about his remarkable series of drawings included with the text? These are far more detailed than the text itself and raise the question as to whether they come from his informant's descriptions or Dom's suspected **first-hand knowledge!**

I am confident that I can express my skepticism without umbrage from my friend, Dom. I believe he will welcome my thoughts, as well as your own skepticism, rather than be offended. **He may have even "built in" a few loose ends!** For if the two sources of UFO origins outlined in this book are valid, immediate popular acceptance might cause more culture shock than would a gradual realization of their impacts!

Finally, I welcome evaluation of the technical information by knowledgeable readers. If valid, this will strengthen my belief that this is a valuable contribution to UFO research. And even if invalid they may have, with great sublety, been deliberately steered to find that most beautiful, that most rewarding, that most spectacular of path of all - that road of self-discovery which not only can change the face of the earth, but tame the raging animal in man.

FOREWORD

In order to clarify the following narrative I include this report as an introduction to my involvement in the events leading to my compilation of this manuscript. It will also serve as a disclaimer, for I make no specific claims as to the validity of all the theories, data or 'proofs' conveyed to me during my investigation.

To personally make such claims would imply that I possess total knowledge of things discussed hereafter, which I do not have.

But I should add that at no time during these events have I uncovered any evidence that would refute what I am about to present to you.

And assuming that the Reader may be extremely busy with many things, as I am in other ongoing investigations, I am going to telescope many unimportant details that clutter my notebooks and files and try to get at the heart of the matter. Rest assured that any data which is important to my narrative will be included.

During a three-month period in the summer of 1978 I investigated a series of UFO sightings between Hazelton and Weatherley, and near Hickory-Run, Pennsylvania. Although these sightings were of most interesting character and are worthy of a lengthy report, I mention them in the present context because my investigation led me to a man I will identify hereafter as "Mr. H."

Mr. H., a surveyor, told me that while walking in an isolated area near Hickory-Run he spotted a circular shaped object, obviously a flying craft of some sort, concealed beneath an overhang in a cliff wall.

He cautiously crept closer, trying to remain in the cover of brush and hoping not to step on a dry fallen branch which might announce his approach. Although his reason told him it was an experimental military device, he also feared it could be a so-called "flying saucer" which might harm him if he were discovered. He paused several times to assess the situation, hoping that his breathing, now becoming heavier through both excitement and apprehension, would not betray his presence.

No sound of a motor, voices, or communication devices came from the machine. Only the chattering of squirrels and intermittent cries of crows rose over the forest's background sounds of birds and insects. His courage and curiosity grew as he became increasingly convinced the device was deserted.

Finally he stepped into a clearing in complete view of the craft. Still noting no sign of life on board, he approached the strange machine. It was resting on tripod pedestals which supported it seven feet above the ground, and he could easily reach and touch its undersurface. A ladder extending from a hatch vanished into the dim glow of the interior, and he hastily ascended it. As his eyes grew accustomed to the change from the

bright exterior he found himself surrounded by a bewildering maze of unfamiliar devices, and for the first time could hear a low throbbing hum, indicating that a power system was operating. He found it difficult to force his gaze away from the perfection of the intricate mechanical details that were flawlessly rendered by the unknown builders of the machine. Turning, he continued up the ladder.

The second deck was larger, about seven feet high and 30 feet in diameter. A series of very thin tubes encircled the central column which extended through the vertical axis of the craft and provided the light source. These tubes, traversing an arc of 90 degrees, emitted a pink-violet glow, reminiscent of neon tubes. Finding himself in the control center, he felt faint from his emotional strain, but forced himself to look about. In the vicinity of what obviously was the control position, small indicator lights blinked in response to signals from deep within the enigmatic heart of the craft's interior. He fought his fear, which would have brought panic had he allowed it free reign. To his left a large control panel displayed levers and buttons and several computer-like screens which were obviously readout panels. But he recognized no regular language, either English or foreign - just unusual symbols.

Grabbing a frayed note pad he hurriedly copied the readout screens to the best of his ability. After about 20 minutes of shaking and sweating profusely under the strain of fearing the occupants might return, he completed the task and then quickly descended from the craft.

But at that moment he spotted two men approaching him. They were of medium height, normal build, wore crew cuts and what appeared to be conventional coveralls.

As they spoke together in an unfamiliar tongue, which he couldn't recognize as any known language, he knew they were discussing what to do about him. Then one of them extended his hand, smiled in a friendly manner as he approached.

That was the last thing he remembered until he regained consciousness about 40 yards from the landing site.

Glad to be unharmed, though fearful that the evidence had been confiscated, he jabbed into his pocket. **The note-book was still there! But his fingers encountered something else. He withdrew a plastic cube, which was about one and one-half inches square!.**

Hoping that I could determine its nature he turned it over to me at a subsequent meeting.

Spectrographic and X-ray examination revealed it most likely was a 2.5 gigacycle transponder, encapsulated in polystyrene resin. Working on this assumption, a colleague and I verified the input frequency by using standard absorption methods, which agreed with our estimation of the X-ray image. We were unable to identify any output value, though one technician who aided us theorized that the output stage may have been designed to activate by a predetermined coded pulse signal which could determine a variable output value.

Quite naturally we were excited because we believed we had an extra-terrestrially-manufactured device in our possession, an artifact which

Main Control-Panel 2/3rds Actual size

--Left arm of pilots chair.

Right-arm of pilots chair.

might prove an origin for UFOs. But our hopes gradually faded: though the device was unique in structure, we reluctantly concluded it did not possess any quality that appeared to supersede our present experimental state of the art in micro-circuit technology (and most certainly that art state at this writing).

We could make little of the note-book. It really proved nothing, for Mr. H. could have conceivably fabricated its strange sumbols them from a fertile imagination. We returned both the cube and the note-book to him.

But that would not be the last we would hear from the witness, who would lead me into a bizarre set of circumstances which comprise this volume. About a month later Mr. H. telephoned me, asking that I meet him at a diner in Jim Thorpe, Pennsylvania.

It was at that meeting that I was introduced to a person whom I will hereafter refer to as "Eone." Over an extended period of time comprising the most of 1978-81 we met many times. I asked Eone many questions and took many notes. I have included those I have considered the most pertinent in the following text.

Gray Barker, the UFO publisher, has begged me repeatedly to edit these notes for his publishing venture. I have done so reluctantly, not principally because I want to illuminate society which will most likely scoff at this material and villify me, but mainly as a favor recognizing our long-standing friendship. I am far to busy in what I consider to be more important research to go on the platform to defend the material or to lengthily annotate it. Nor will I amplify it with my interpretations which might provide dangerous knowledge to the military-industrial complex which threatens to incinerate all of us.

I leave Eone's remarks to stand on their own. Readers may believe or interpret as they wish.

----- D. C. Lucchesi, Nov. 15, 1983

INTRODUCTION

I find it most convenient to reproduce my notes in the same format in which they were made, a series of questions and answers. It should be understood that these questions were not asked during any one meeting, but over a period of time during the years 1978-1981.

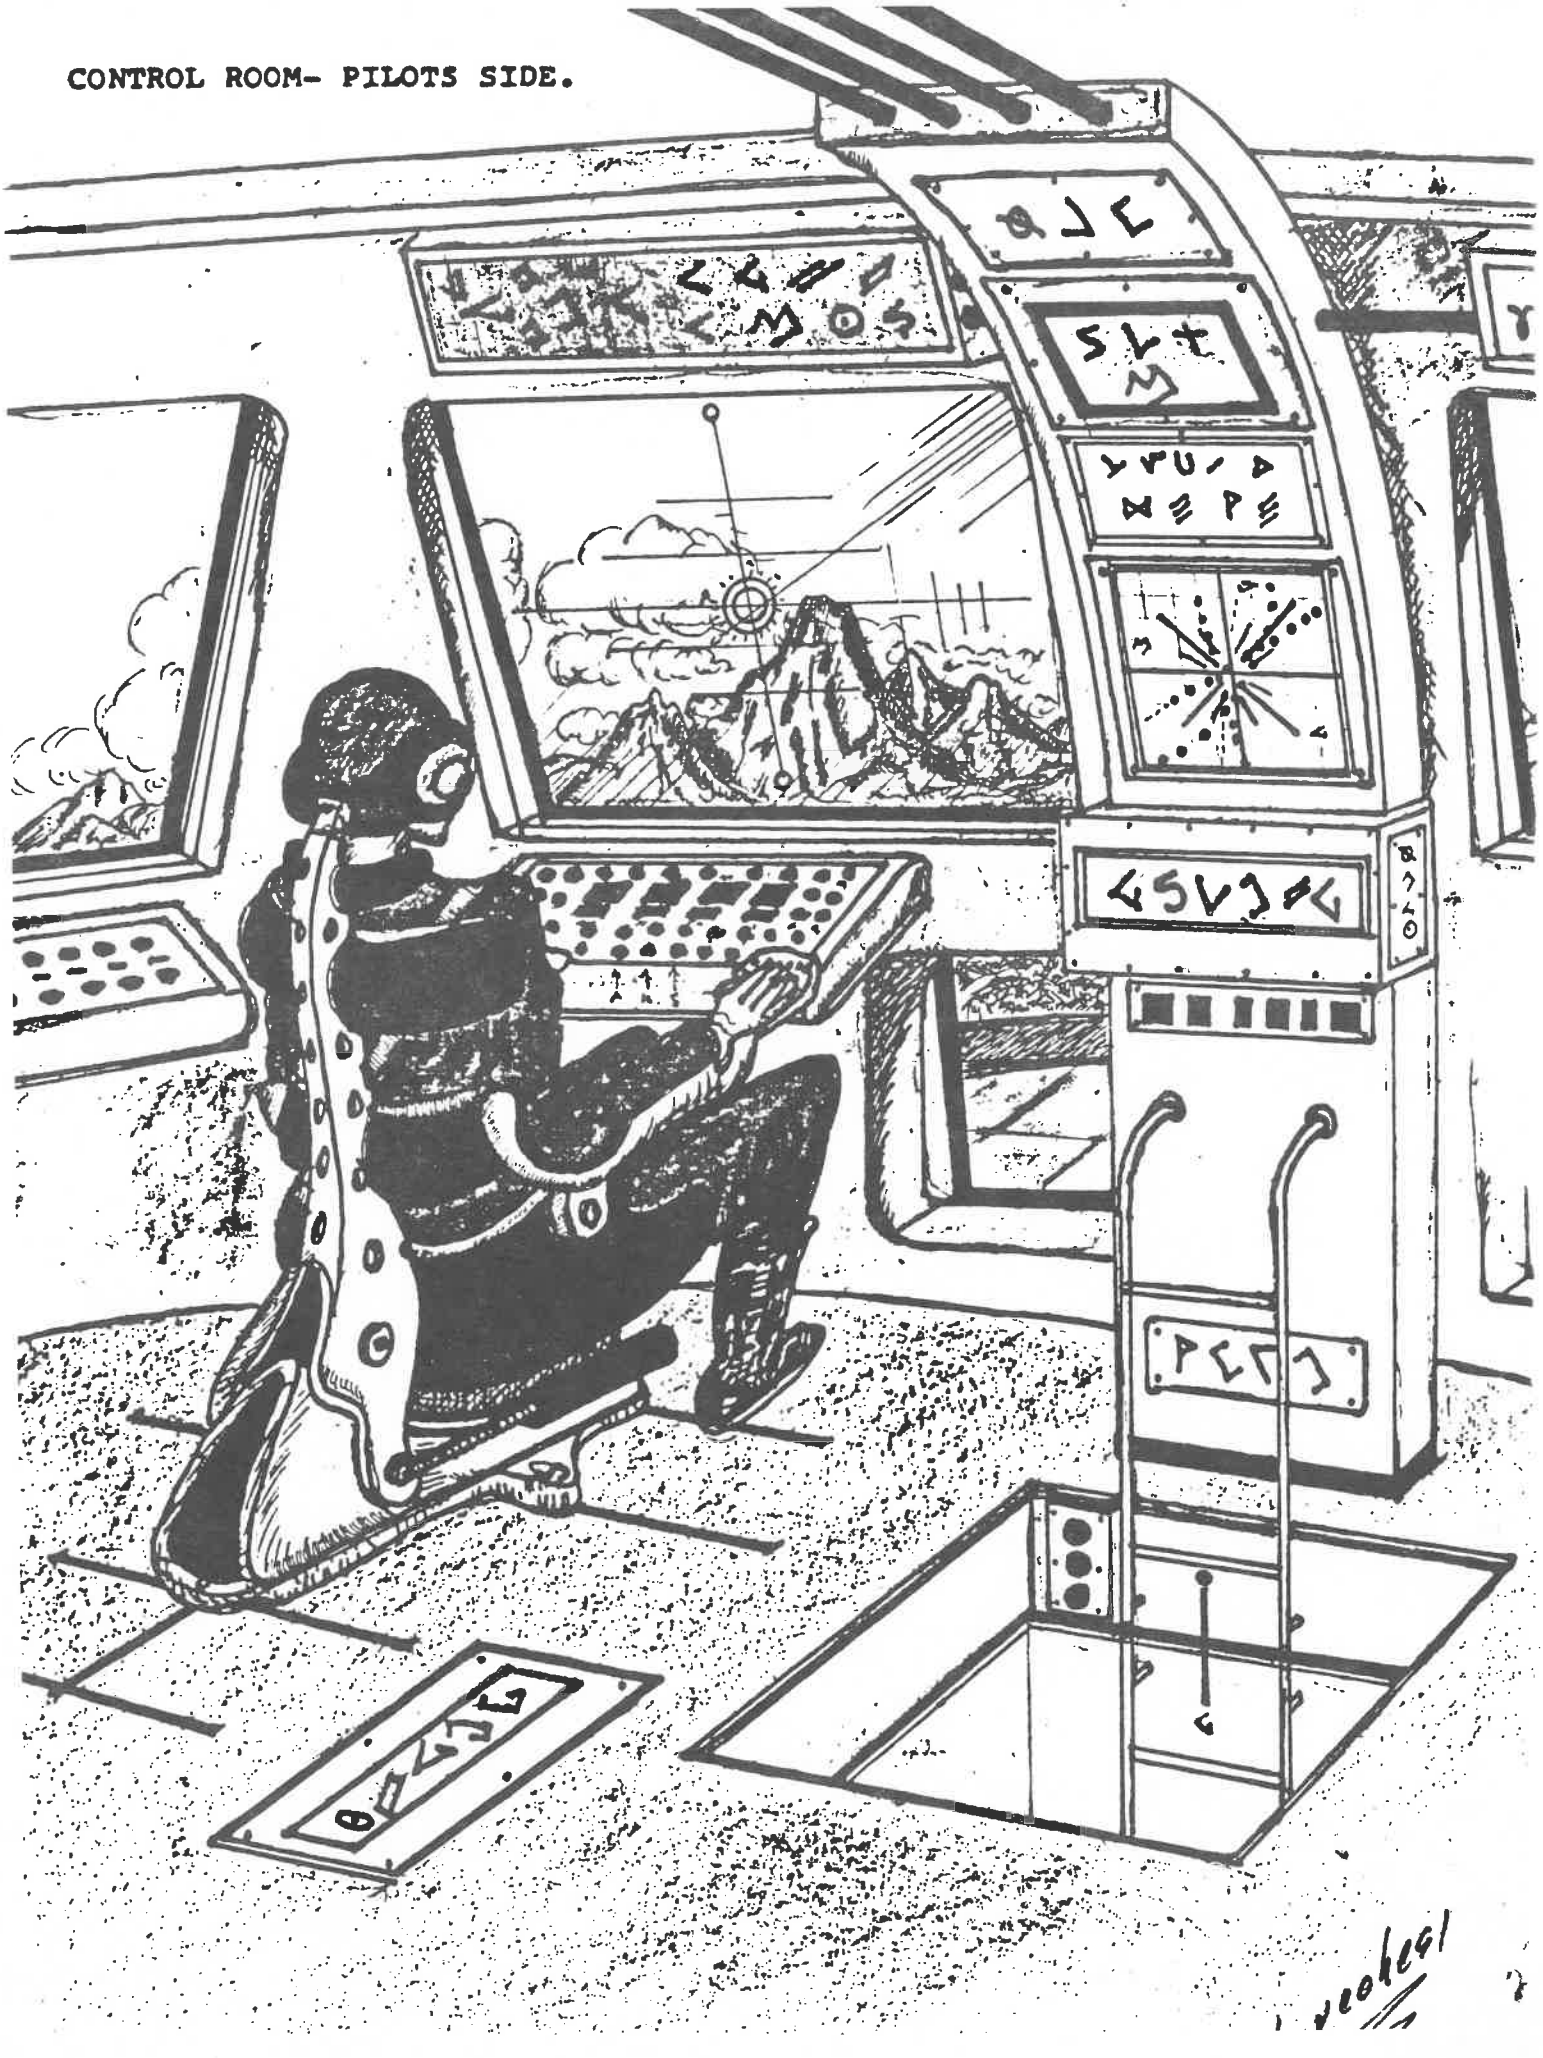
The term, "Rin-2," is my own substitution, replacing the alpha-numerics which signify the home base and origin of the various Sky-Craft mentioned hereafter.

The interviews could have been accomplished in a shorter period of time, had I deemed it proper to press Eone for information on a continuous basis. But I noted that even when refused answers at a given time, quite often such would be given freely at a later meeting. Eone could have been consulting with superiors or colleagues before answering, but at one time he stated he did not "function under orders from anyone," which may have indicated that he was the leader with full autonomy, or the supreme authority of his group. More likely these delays were deliberate in order to assess my moral attitudes, metaphysical concepts and my various opinions as to the world in general. In fact he would repeatedly interrupt or terminate the sessions in order to subject me to such questioning. I have not included these parts, feeling they would be of little interest to readers.

Because some of the answers by Eone were so lengthy, I have excerpted from these in this section, hoping to encapsulate and speed reading and comprehension of the material. However I have included his lengthier dissertations in a separate section following this.

Quotations of Eone would benefit from rewriting in a more popularized form of text. But although it reads as rather ponderous and pedantic, I have chosen not to try to simplify it, fearing such could alter meaning. I made an effort to teach him some of the idioms we use in normal conversation, but to little avail; he would soon revert to his way of speaking. This "formalized" style may have resulted from learning our language from a computer program which translated our radio and television transmissions. I am also afraid that I fell into some of the same formalizations of language when with Eone, some of which I have attempted to edit.

CONTROL ROOM- PILOTS SIDE.



CONVERSATIONS WITH EONE

Q: Is the Sky-Craft able to travel in space? To the Moon? Or Venus?

A: Yes, it could circumnavigate the Solar System, but it is not provided with the necessary life-support facilities to sustain life for extended periods of time.

A: Could you travel to another galaxy?

A: A larger craft could hold a course to a distant star system and be capable of maintaining constant acceleration. But there are other factors to consider, such as deacceleration, life support, and time contraction, the last placing the total concept beyond the realm of practicality. In other words, theoretically 'Yes,' practically 'No.'

Q: Your pilot told me that the Sky-Craft was capable of speeds in excess of 8,200 kilometers per hour. Is that correct?

A: Yes, at altitudes less than 80 kilometers; however as the altitude increases the efficiency of the drive system approaches full potential and we can apply constant G-accelleration of from one to one and three-quarters G in free space, which is within the minimum design parameters of this particular craft, as it was not constructed for interplanetary flight, but primarily designed to function in Earth-field. Therefore we cannot utlize the full potentials for extensive periods of time. Short term power output is maximized in order to supply us with full maneuverability in the event of danger from Group type craft.

Q: I have heard rumors that conventional aircraft have been either damaged or destroyed after being subjected to some type of destructive field when in close proximity to a craft answering the description of a Sky-Craft. Is this possible?

A: Yes. During flight the computer actuates and is in full control of the various systems which guide and power the craft. However, when the systems are engaged on an evasive-mode computer program, it has been determined by the engineers of Rin-2 that this could cause the heterodyning of certain components in the drive system of the Sky-Craft which could become hazardous to nearby objects within the influence of the radiated field, and could in effect disrupt in part the molecular bonds of a nearby object. Fortunately, this is not a common condition, and is mainly statistical. It depends on the RPM of the field motor-generator rotors, plasma temperature, synchronization and dynamic load. We have not been able to eliminate the problem in its entirety, and, though remote, it remains a characteristic of the drive components.

Q: How far from here is your base, Rin-2?

A: In the vicinity of 6100 kilometers.

Q: Are you permitted to discuss the coordinates of Rin-2?

A: I do not function under orders from anyone. It is my personal decis-

ion not to expose the exact location; however the general area is between South Latitude 10 to 20 degrees and West Longitude 60 to 70 degrees. It is in the exact location you discussed at length in a previous conversation. (I do not recall the conversation Eone referred to, nor did I feel it proper to press the issue at the time.)

Q: In 1978, near the town of Rockport, Pennsylvania, you returned to your Sky-Craft and found a local surveyor aboard, taking notes and sketching the control panels. Is that correct?

A: Yes, we have discussed this prior to this evening.

Q: Yes, I know, Eone; Yet I would like to ask you something about that.

A: Proceed.

Q: In his note-book, which I copied at a later date, he had written the words spoken by the pilot of the Sky-Craft. Were you the second person?

A: Yes. We had returned and found the stranger in the control section of our craft. I was quite startled.

Q: The words written in the note-book and heard by Mr. Home were: "Pelo acnor krep alodin iloder beloz." I have always retained a curiosity as to their meaning. Can you tell me, Eone?

A: He did not notate correctly, however. The words spoken were "Piclo actnory crepp aelodin elodes belok licribo," the meaning of which follows: "The being may have a potential for violence. Decide as to disposition." We spoke in the language of Rin-2, which is a symbolic tongue. You see each letter of our alphabet retains a conceptual meaning as well as a phonic one. Learning this alphabet gives one the ability to assemble each symbol into a system of patterns which in turn convey pictures into conceptual data by following certain basic rules of syntax and assembly. By using this system we have discovered that it facilitates the programming of our computer banks.

Q: Would you teach me the symbols?

A: Yes, although it would be of no specific use to you, or would it?

Q: Eone, I would like to ask a series of questions concerning the UFO phenomena and the various accounts by different witnesses. In other words, I would like your opinion as I assume you cannot have direct knowledge of all the accounts.

A: True. I have a limited degree of knowledge concerning what you describe as contact phenomena or sightings. Of course a small percentage can be attributable to the various Sky-Craft from Rin-2 which have through our inadvertence been seen in the air and on the ground surface. We are few and I might add extremely cautious as to whom we converse with as to our origin. Presumably the major portions of the contact cases are attributable to Group-type interference as is exemplified by the frequent allusion to the cephelocephalic creatures who inhabit the Sky-Island. Others can be considered hallucinations, natural causes such as atmospherics and electrical phenomena, the fabrication of accounts by various individuals and of course, direct mind-control, as applied by the Group.

Q: What about the extraterrestrials?

A: A diversion, of course.

Q: What about parallel realities or other dimensions?

A: To my knowledge this particular space-time frame resolves into logical energy relationships from which functional derivatives can be extracted. The theoreticians in Rin-2 have never developed or retained the notion that another space frame was required to explain energy relationships, or that this frame is in any way influenced by what may be described as external realities, were they to exist.

Q: I would like to return to the other question. Do you think that this planet has ever been visited by extraterrestrials in the past?

A: I have no direct knowledge concerning your question. I could speculate that the possibility exists, however.

Q: Have any of your craft and crews ever been encountered by any other Outsiders on the ground?

A: Yes, It has occurred a number of times. In most cases craft from Rin-2 had descended to the surface to repair a sensor on the undersurface or to collect botanical specimens, and were approached by Outsiders. Those who did not flee were confronted by the person or persons from the craft and spoken to in the language of Rin-2 while the crew pointed to the sky. This diversion was supplemented by a spectacular departure, usually appearing to obtain the desired results of misdirection.

Q: Could your craft harm somebody on the ground?

A: Yes, but this is dependent upon many variables. Near the ground or while hovering the dynamics of the system are subjected to various influences, such as Earth-field potential at a given loci, atmospherics, temperature, Earth conductivity and proximity to Earth power systems. The drive also generates frequencies and associated harmonics in the ultrasonic and radar portions of the spectrum which could cause burns, hallucination, brain damage and general debility. Recently we have incorporated circuits in the central computer which minimize the probability of the drive components producing the harmonic resonances in the lower drive ranges.

Q: How does the crew of the craft survive and function under these influences?

A: All Sky-Craft crews are equipped with nine surgical implants distributed at various locations in our bodies. Before you ask further I will explain. The devices are micro-minature transducers that monitor or control the various systems in the body suich as pain, reaction time, muscle tension, blood chemistry, hormone balance, body temperature and blood pressure. The signals which are transmitted by transducers located in the seat padding of the craft are fed to the computer system, which processes the data and supplies the feedback information which creates sufficient modification of the bio-molecular system to insure the survival of the crew during violent maneuvers, while at the same time enabling us to withstand the violent fields generated by the drive systems. One of them keeps me informed as to the disposition of the craft's systems on demand, and, by use of a mental code I can, at the distance of three kilometers, activate and determine the location of the craft and contact my crew through the symbolic readout portion of the computer.

Q: You mean by mental telepathy?

A: Of course not! The implant is a transceiver, not of thoughts but information which is transmitted in coded signals, consisting of discrete tones and interrupted sets. Our technicians could have incorporated an audio receiving and transmitting section with direct connection to the auditory nerve, but that would involve larger implants, greater power demands and increased band width.

Q: Is there an Earth energy grid?

A: The Earth has a relatively geometric field that is somewhat similar to what you call a grid. We use it occasionally for navigational purposes. However it is not exactly symmetrical, parts of it appearing in theory to be artificially formed. By whom, or for what purpose has not been determined by the geologists of Rin-2.

Q: Tell me, Eone, what about the production of invisibility which I described to you in reference to a story of a naval destroyer's having been made invisible by the application of electromagnetic radiation. Is this possible?

A: I have heard many of your theories concerning the subject; but should you consider the problem in proper perspective you would see that Outsider theories regarding the subject in question are obviously childish. A proper approach to the question would be to obtain a greater knowledge concerning the science of optics such as refraction and diffraction, and the molecular and atomic structures of materials. It would be more advantageous, I am certain, that anyone well versed in any of the sciences would not accept the concept. It becomes obvious that many terms of an ambiguous nature are used by those involved in the writing of accounts concerning what you call the UFO phenomena, terms such as 'Free Energy,' 'Space-Warp,' 'Intangibilty,' 'Invisibility,' 'Magnetic lines of force,' 'Other dimensions,' 'Parallel universes,' and other such nonsense, all designed to confuse. And if not for that purpose, an example of the ignorance of the propounder of such absolute non-scientific material.

A: Well, what then is your opinion concerning the story I told you about the 'Hangar 18' incident?

A: If at all true, which I doubt, it would be a masterful piece of misdirection on the part of the perpetrators. Certainly not from another galaxy or time frame or other reality, but possibly a Group maneuver to add to the general confusion.

Q: What about the little men?

A: Midgets, or little people as you call them. I cannot help being slightly amused at the thought of how unpopular you would be should you ever print what I am telling you.

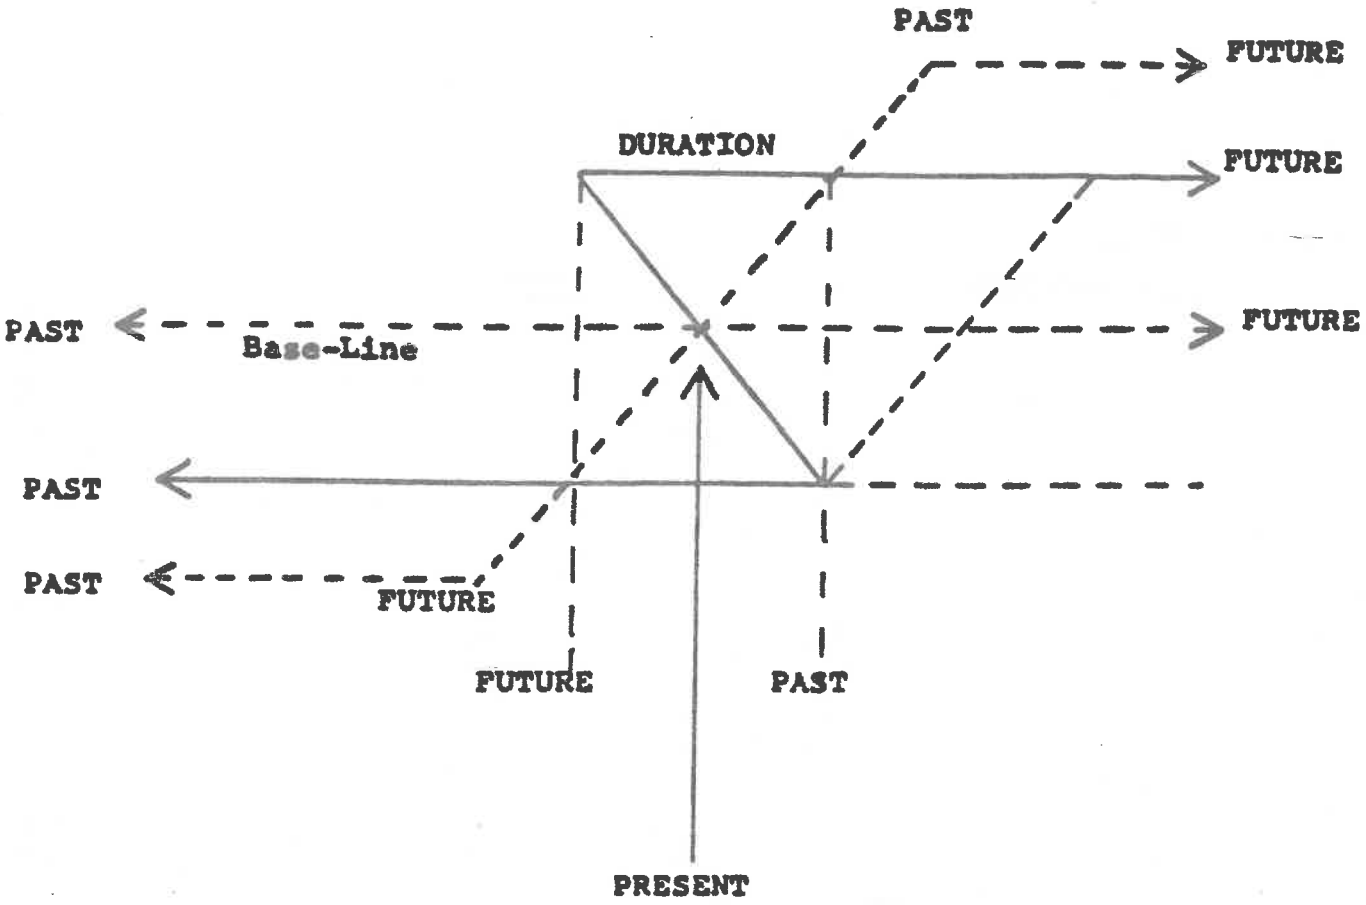
Q: That's all right, Eone. I'll probably publish it anyhow. But what about the scientists in the field of ufology who make various claims concerning UFOs?

A: Opportunists!

Q: Have you ever lost any Rin-2 craft Outside?

A: No.

Q: When do you think the Group achieved space flight?



A representation of a diagram which Eone drew on a tablecloth in a diner in Jim Thorpe, Pennsylvania, while he was engaged in attempting to explain a function of the on-board computer. He claimed the computer could see forward and backward in time by incorporating a junction with 'gates,' a particle function we on the Outside have not yet considered. The degree of Time-Sense is minute, but does allow extremely rapid response in certain applications. He also stated that the 'forming' of the junction was difficult and presented a problem even for the fabricators of Rin-2.

He also revealed that the master computer in Rin-2 had certain components of a biological nature incorporated as part of its memory functions.

A: I do not have any information concerning that question. But I am of the opinion that it was further in the past than we realize.

Q: Describe the political system in Rin-2?

A: There are not any politics in Rin-2. We have no leaders such as you do. All the inhabitants are qualified as individuals to maintain a positive and constructive aspect in all respects regarding each other and the betterment of technology, as well as the relationship to man and his relationship in turn to the cosmos.

Q: What do you think of our political system?

A: I prefer to withold any comment at this time, though the question is valid. The political systems you refer to are results rather than causes. To give you a proper answer would require a long period of time which we do not have this evening.

Q: What is wrong with our civilization, Eone?

A: Again, that would require a lengthy dissertation. A condensed answer to your question would be: 'You are not civilized as yet!'

Q: In your opinion, what is the major problem faced by the Outside. I mean such as war, disease and so on?

A: You have many problems which retard your progress toward civilization. The major problem is over-population. The other is allowing the dilution of physical and mental characteristics by non-selective propagation. In the future I will clarify all of your previous questions concerning your world of Outside.

Q: Do you ever accept Outsiders in Rin-2?

A: Yes, quite frequently an Outsider is approached by one of us and given the location. But he must have the proper qualifications, and must come alone, utilizing his own means in traversing more than two hundred kilometerrs of extremely formidable terrain in order to qualify as a person of Rin-2.

Q: What are considered proper qualifications?

A: The person must be intelligent, possess high ethical standards and be well versed in science. He or she must also be capable of accepting the moral responsibility of adhering to the principles of the people of Rin-2 by his or her own decision as an individual, and not as a person who is influenced as a component of a collective group.

Q: Would I qualify as a potential candidate for Rin-2?

A: No you would not. You are not of the proper age, being past your prime by a number of years. Also, you have been preconditioned to certain aspects of your society which would not be of benefit to the people of Rin-2. Another problem is that you have a tendency toward violence. You would do battle in the name of a cause, when in fact those of us in Rin-2 have no specific causes. Yet it may be considered as a way or mode of living, a quality we strive for as individuals in aiding one another in an effort to attain a harmonious aspect to nature and the Universe. You see, where you would do battle, we would reason; where you would attack, we would defend. Though I might add that while these very qualities you possess would not qualify you as a person in Rin-2, they certainly qualify you as one of the more acceptable persons in your society.

Q: I do not fully understand what you are saying, Eone. I presume most Outsiders, as you call us, will fight for a cause when we believe it to be right. I don't see anything wrong in that!

Q: I did not presume you would. You use the terms 'right' and 'wrong' in an effort to justify your attitudes and actions in the face of disagreement or opposition to your particular point of view, without taking into consideration the fact that your opponent indulges in the idea that he is also justified in his action for the same reasons and therefore does not accept your viewpoint. It becomes obvious that regardless of who may be correct or incorrect in the advent of a conflict of a destructive nature, both parties have been responsible for the inception of a negative rather than a positive action. Upon further consideration it would become apparent that the problem lies in the fact that the people of the world have become de-synchronized in respect to nature. There can be no contribution to perpetuity by adhering to a system that devours its own body, and which is what your so-called civilized societies are in the process of completing. The ecological balance of the earth system is rapidly moving toward extinction. All species have their own individual places and privileges to exist in the system as you do and should be permitted to fulfill their purposes. Instead, man has converted his world in most part to a bizarre horror of starvation, pain and termination, attested to by the fact that many species are extinct, all due to man's greed, cruelty and quest for power. At the same time, under the guise of compassion, you protect, feed and nurture criminals, imbeciles, _____ and incompetents, allowing them to _____ indiscriminately in large numbers, while potentially worthy people are left to starve and terminate. Great effort and resources are diverted to the construction of weapons that destroy in a few seconds that which has taken years of labor to construct. Diversions such as competitive sports absorb a large portion of funds and time that could be applied to a more constructive endeavor such as applying the funds and effort to the construction of medical facilities and the fabrication of advanced diagnostic and therapuetic equipment.

Although the various media to which you are subjected are designed by individuals who probably have positive intentions for their utilization, these very devices, such as television, radio, motion pictures and recorders, have become means of exploitation rather than paths to better education and enlightenment. It is all part of the process used by the Group to control the minds of the multitudes to the degree that the major portion of the population is not aware of what is occurring, nor do they realize that they are _____. As you must realize at this pont, I have attempted to simplify and condense my remarks concerning the subject in question. I realize that the final dislosure in the comments I have made may be shocking to those who have not considered the implications, but by checking with _____ at any _____ they can be verified. I would like to add the concept that any negativity is a detrimental factor within the projected totality of the Matrix of Space-Time and Energy or Mind-Matter-Energy, and as a result the positive manifestation is therefore compromised and affected by the neutralizing force emitted by a

negative concept or action thereof. There is neither good or evil, only the basic characteristic of the Matrix to consider. It remains a matter of choice: either you follow a progressive aspect in your relationship to the manifest realty or retrogress into the oblivion of Matrix Zero. It remains your decision to choose positive or negative. You make the choice. You are responsible. It is your preference between creative and destructive, plus and minus. It is truly simple and requires only consideration on your part as an individual. There are no specific requirements, you see.

Q: I feel there is truth in what you say, Eone, but as you have told me many times, I am conditioned to my environment and I do enjoy to a degree the challenge. At the same time I am horrified at the injustices I see perpetrated on helpless creatures. Tell me, Eone, what would the people of Rin-2 do if there were atomic war?

A: The complex would be sealed off from the outside world for the required period of time - until all the atmospheric contamination on the Outside was dissipated. Rin-2 is powered by geothermal energy and our sustenance is supplied by our hydroponic systems which are capable of maintaining the complex for extended spans of time.

Q: Who developed the driving system of the Sky-Craft?

A: The theoreticians in Rin-2 uncovered the basic principles in 1936. It was the result of a concentrated effort to develop a mobility outside the confines of the complex.

Q: Why not use the standard aircraft of the time, or did you?

Q: No, we did not. The entrance to Rin-2 is concealed in a precipitous mountain range. There are no level surfaces in close proximity that could be converted into practical landing areas. Nor did we possess the means to locate and fraction petroleum.

Q: Would it be possible for us Outsiders to construct a craft similar to yours?

A: In my opinion the Sky-Craft is less complex than many of the constructs you use for commercial and military applications. They contain fewer components than your craft, and it is feasible that your scientists and technicians could solve the problems involved were they to change their attitudes about certain principles. Your integrating computer, however, may impose certain difficulties, even though your solid state technology is quite advanced. Fabrication of the alloys would pose an additional problem.

Q: What would our theoreticians have to consider?

A: The Basics, as related to matter and energy, such as Elasticity, Coherence, Density, Momentum, Radiation, Frequency, Statistical Distribution and Energy - Potential within a given space time-frame of reference. In Rin-2 we have a name for the subject. It does not translate well into your language, but it would be something like 'transition Particle Dynamics.' That is as close as I can come to it.

Q: You mentioned that alloys could be a problem.

A: Yes, in Rin-2 we have an abundance of rare earth elements such as platinum, gold, rhenium, niobium, ruthenium, osmium, indium, and many others that are used in the construction of various mechanisms and elec-

trical equipment. I am not completely familiar with the alloying processes other than the fact that during the fabrication of these alloys they are subjected to the influence of various frequencies which affect the characteristics of the molecular bonding of the materials.

Q: Could the craft be constructed without these alloys?

A: I presume it is possible, but certain performance parameters would be sacrificed, and the power systems would lose their adiabatic efficiency. This in turn would require the addition of extra fuel cells to the system. It would be an interesting problem to determine the extent of the hysteresis losses and as to whether the systems and the craft would achieve proper resonance. I do believe it would function, however.

Q: Do Group-type saucers use the same principles as Rin-type craft?

Q: In principle yes, but the application differs from ours. They use a less sophisticated system which has a tendency to emit raw plasma. Control systems are not properly synchronized with the power mode and the tendency toward instabilty is evident in their flight patterns, such as mutation and erratic altitude control. They also have a radiation problem in the alpha and gamma ranges which they are unable to correct.

Q: What is the R.P.M. of the rotors on the rim of the sky-craft?

A: Though the rotors are capable of more than 360 degrees of actuation, the possible completion of a revolution is statistical. The rotors do not literally rotate in the mode you are considering. Your electrical engineers on the Outside would call it 'hunting.' You see, they function on a low intertia principle and could be considered as field equalizers or dampers, which balance, direct, and control the forces generated by the driving systems.

Q: I ask that question because many people who claim to have seen or had contact with UFOs claim to have observed the rims rotating, and emitting smoke, flame or even lights. What is your opinion?

A: It is difficult to comprehend why anyone would construct a device which requires rotation of mass at the extreme perimeter of a central axis to produce propulsion, taking into consideration that centrifugal stresses would increase proportionally to R.P.M. This would affect the reinforcement requirements and volume considerations of the air-frame's design. If we consider contra-rotation of two equal masses, however, this would effectively cancel the tendency toward gyroscopic precession and mutation. But the centrifugal forces would remain high, and mass would still increase with R.P.M.

No! Not only is it impractical - it is ridiculous!

Q: Do the cephelocephalics, as you call them, ever kidnap people?

A: I would have no specific information concerning your question, and as I explained once before, we do not interfere in the Outside.

Q: How many G's can the crew of the Sky-Craft absorb?

A: The computer is calibrated to subject the craft to a maximum parameter not exceeding 12 G's, and then only in maximum emergency mode, and for extremely short periods of time. However, it is possible for the pilot to override the computer and subject the crew and the craft to a gravity force of more than 17 G's, but even with the implants and the

generated fields surrounding our respective control position, we would in all probability terminate due to excessive physical damage. I might add we would not hesitate to utilize the full acceleration potential should the craft be in danger of falling into the possession of the Group, as our termination would signal the computer to accept a homing signal from Rin-2 and return the craft to base.

Q: Do you know whether a vast network of caverns exists beneath the surface of the Earth, and, if so, where the entrances are located?

A: I have no knowledge concerning your question, though Rin-2 would conform to your description, in one location at least. The entrance to our complex is beneath a high mountain which is large enough to contain the ancient temples of Khoom. Vast tunnels penetrate the area and extend for at least 50 kilometers, which is as far as we have gone in our explorations of the interior of the area. I am certain that a portion is artificially created, as the surfaces are smooth and the molecular structure appears to be altered. We do have intentions of exploring the caverns to a greater extent in the near future.

Q: Eone, I was meaning to ask you many times concerning the weapons on the Sky-Craft. Is there more than one type?

A: Yes. Three primary devices are used to protect the craft against harm. Fortunately we have never been placed in a position where activation of the systems was warranted.

The weapons are all under the control of the central computer system which anticipates the location, speed and range of any object to be eliminated, and also controls the Sky-Craft during the process. The devices used are phased-particle-modulators, high energy lasers, and what you would call tight-ionization beams. All these devices have such a tremendous potential for destruction, due to the high energy released, that I doubt whether we would ever use them in the vicinity of populated areas on the Outside. We would prefer to terminate before harming any living entity which is innocent of involvement in any attack upon us. This is our principle.

Q: You have been giving me the shivers talking about the Group and its activities. I am beginning to get paranoid and wanting to look at everyone in a suspicious manner. What does the Group wants from the people of Rin-2 anyhow? What is all this sneaking around? You with your craft. The Group with all of their various craft and Sky-Islands. The so-called cephelocephalics and other types of weirdos driving everybody out of their minds with robots, odors, mind control devices and other various ploys, as you say, 'designed to confuse.' As I see it, you at Rin-2 or even the people of other centers such as yours which may exist are as much victims of the Group as we Outsiders, as you call us. Though I do have to admit that you may not be under their control to the degree that we are, it seems you still hide and defend as you call it. Give me your craft for 24 hours, and there won't be any Group left worry about!

A: As to your last statement, I would gladly give you the privilege of command of the Sky-Craft if I knew it would be effective. But I would prefer that you consider the problem in greater depth, if you have not

done so previous to this evening. It is my opinion that you have evaluated the situation and have arrived at the realization that the solution is not evident at this point in time and that your remarks are an indication of your frustration in the fact that no immediate answers to the dilemma are applicable. Believe in the fact that I have retained the same emotions for short periods of time, as I am not inhuman. But reason must prevail and we must yield to the laws of logic and truth.

As to your question concerning what the Group wants from Rin-2, and using your vernacular, it doesn't want anything of material nature. It would like to destroy the principles we represent. You see, we are the antithesis of their concepts concerning sentinent life on this planet, an anathema to their desire for power. The fact that we possess information concerning the Sky-Island and its location disturbs their sense of security. They also dislike the Sky-Craft of Rin-2 and the weapons at our disposal. They know of the vast treasures contained in the ancient city of Khoom and are fearful we would utilize it as a means of undermining their power structure on the Outside. All this offends them. They and those preceding them have held the major portion of humanity in relative subjugation to their wills for centuries, and do not wish to be exposed. As you must have realized, destruction of the Group is not a practical solution to the problem, as that would create chaos of unimaginable degree. The Group is not centralized at one specific location. Innocent persons would suffer needlessly; economies would collapse; world power structures would fail; social structures would degenerate. The predatory nature of the major portion of the people of the Outside, uninhibited by the thin veneer of pseudo-civilization, would revert to type and viciously destroy and plunder indiscriminately. Though the Group is inherently negative or evil, as you would call it, it is and does act as a form of inhibitor in the process of its ability to control the multitudes through various and diversified applications of the science of mind control.

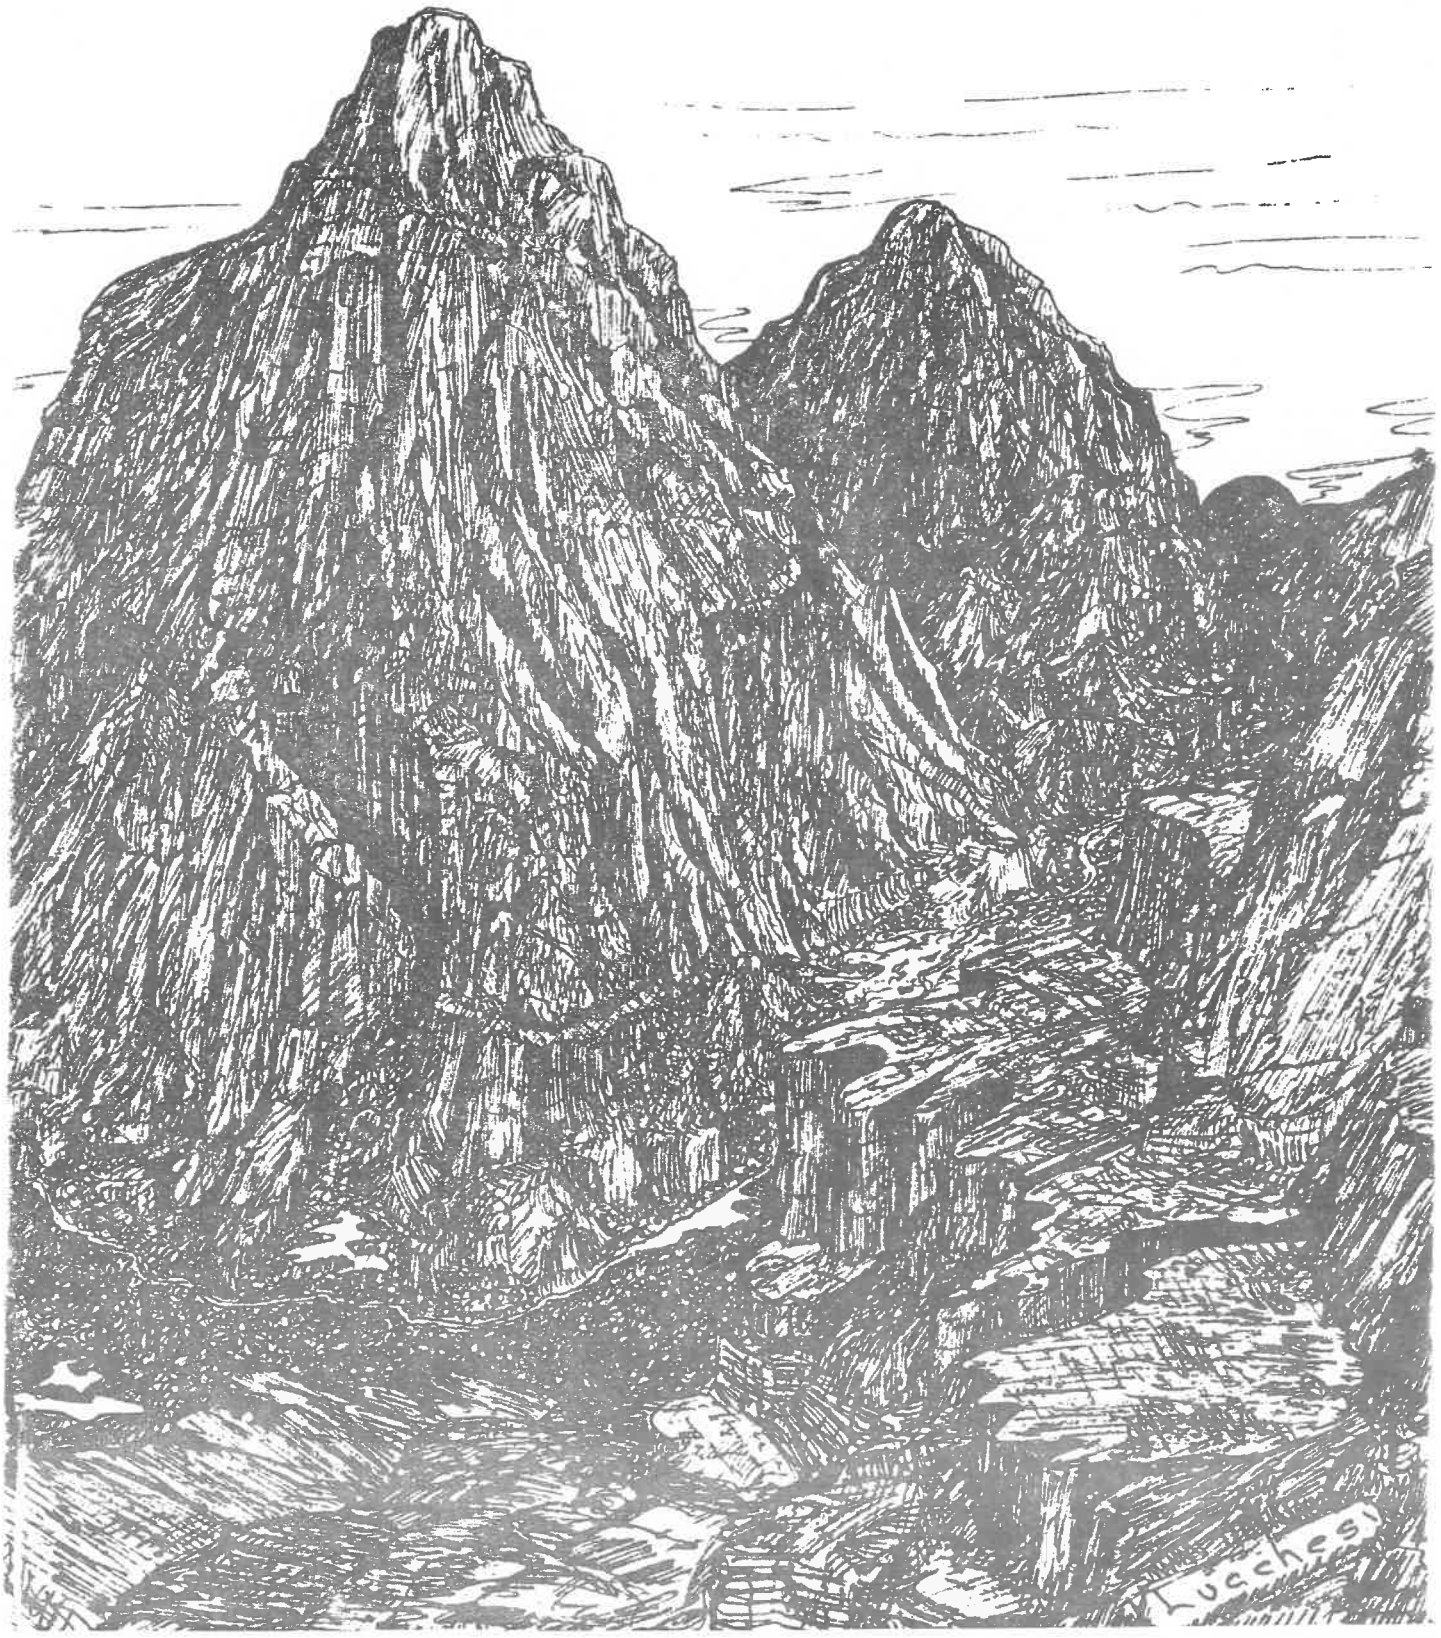
Q: I presume you are correct in your evaluation of me, Eone; I have thought about the many problems humanity faces for a long time, and it is frustrating to consider the implications. Most of the major breakthroughs in science have been converted and applied to destructive purposes, and I think that even the Group doesn't know how to cope with the problems of atomic warfare. That one got past them and I think that even they are at a loss this time.

A: Yes, I presume they are! It is not a pleasant concept to consider in either case!

Q: Now a question concerning a subject which has held my interest for many years, Eone. It concerns Radionics. Are the devices used by Radionics practitioners actually functional?

A: The devices, as you have described them to me previously, appear to consist of tunable linear antenna systems, equipped with numerical calibrations that determine the frequencies of various samples placed in or in proximity to them. You also stated that they require the intervention of a biological system, such as a human, to read or sense the output signals.

The mountains of Khoom



Q: That's correct. Also, no electrical input is required in order for the system to function. How would such a system operate?

A: Considering your description of such devices, there is a definite potential that discriminate function is possible. It would depend upon the operator to a large degree. However the materials used in the fabrication of the unit would be of prime importance. What you have described is essentially a soft matrix tuner and is relatively harmless. However, were you to apply any appreciable power to the output stage and modulate the carrier by _____, you would have a dangerous device that could produce havoc in the hands of an indiscriminate operator.

Q: Could you describe a foolproof method for me to use in constructing one of these?

A: I could. But were I to do so I would place you in grave danger, should your utilization of the device be detected by certain agencies which are alerted to the possibilities of the discovery of the proper method of construction. Understand: A so-called radionic device properly constructed and powered is similar to the devices used by the Group to control thinking.

Q: Can there be such things as haunted houses?

A: If you speak of apparitions or manifestations of a strongly sensed presence, yes. In fact the builders of the Ancient City were masters of the art of incorporating into various corridors and structures the various potentials for creating what you would call the transmitting of psychic effects.

Actually you could literally build a so-called haunted house or place. It would operate on the principle of resonance and would be dependent upon the shape and form of the area, and the materials utilized in construction. Such is strangely similar to a your Radionics or thought controlling devices. It is powered by the various constituents and chemicals composing the intrinsic aspects of the structure involved. The technicians in Rin-2 have constructed an instrument that measures the thermal and electrical gradients involved in an area of this type and can duplicate the effect. Using your method of creating descriptive terms, we could call it a combination of psycho-stim or psycho-synch. You see, its function is similar to a transponder reacting to the mind energy of those present during the manifestation of the psychomatic transmission.

Q: How old are you, Eone?

A: Chronologically I am 73. However, a recent evaluation by the biochemists in Rin-2 indicated my physical equivalent as 38.

Q: Let me see! If I am correct, you were born in 1906. That would place you at 20 years of age when you arrived in Rin-2 in 1926. That would be 53 years there, as it is now 1979. Good gosh, Eone! You do look great (I had estimated his age at about 30)! Does anyone on the Outside have the answer to the aging process?

A: The Group, of course. But their system is only partially effective. I am also aware that individuals employed by large research organizations

have also discovered the means to achieve longevity and have suppressed the data for obvious reasons.

Q: What do you mean by "partially effective"?

A: It should appear obvious to you that the prolongation of life is not the proper approach to longevity. There are other factors to consider. Factors such as population control and its relationship with ecological stability are important considerations.

The aging syndrome in itself is not truly reversible. There is no elixir of youth as you would call it. The true approach to the problem, however, is the effective extension of the system's potential during an earlier period of its biological progression, prior to the onset of tissue, muscle and glandular deficiencies becoming apparent. It is this period between 22 and 32 that the prolongation of youth and the success of same is most effective toward achieving the goal of longevity.

Q: I still don't know what you mean by "partially effective," Eone. Especially in your reference to the Group's approach to the problem of aging.

A: As I said, the aging syndrome is not reversible. The Group prolongs old age, not youth!

Q: You mean they become more and more decrepit but live longer anyway?

A: Yes, that is essentially correct.

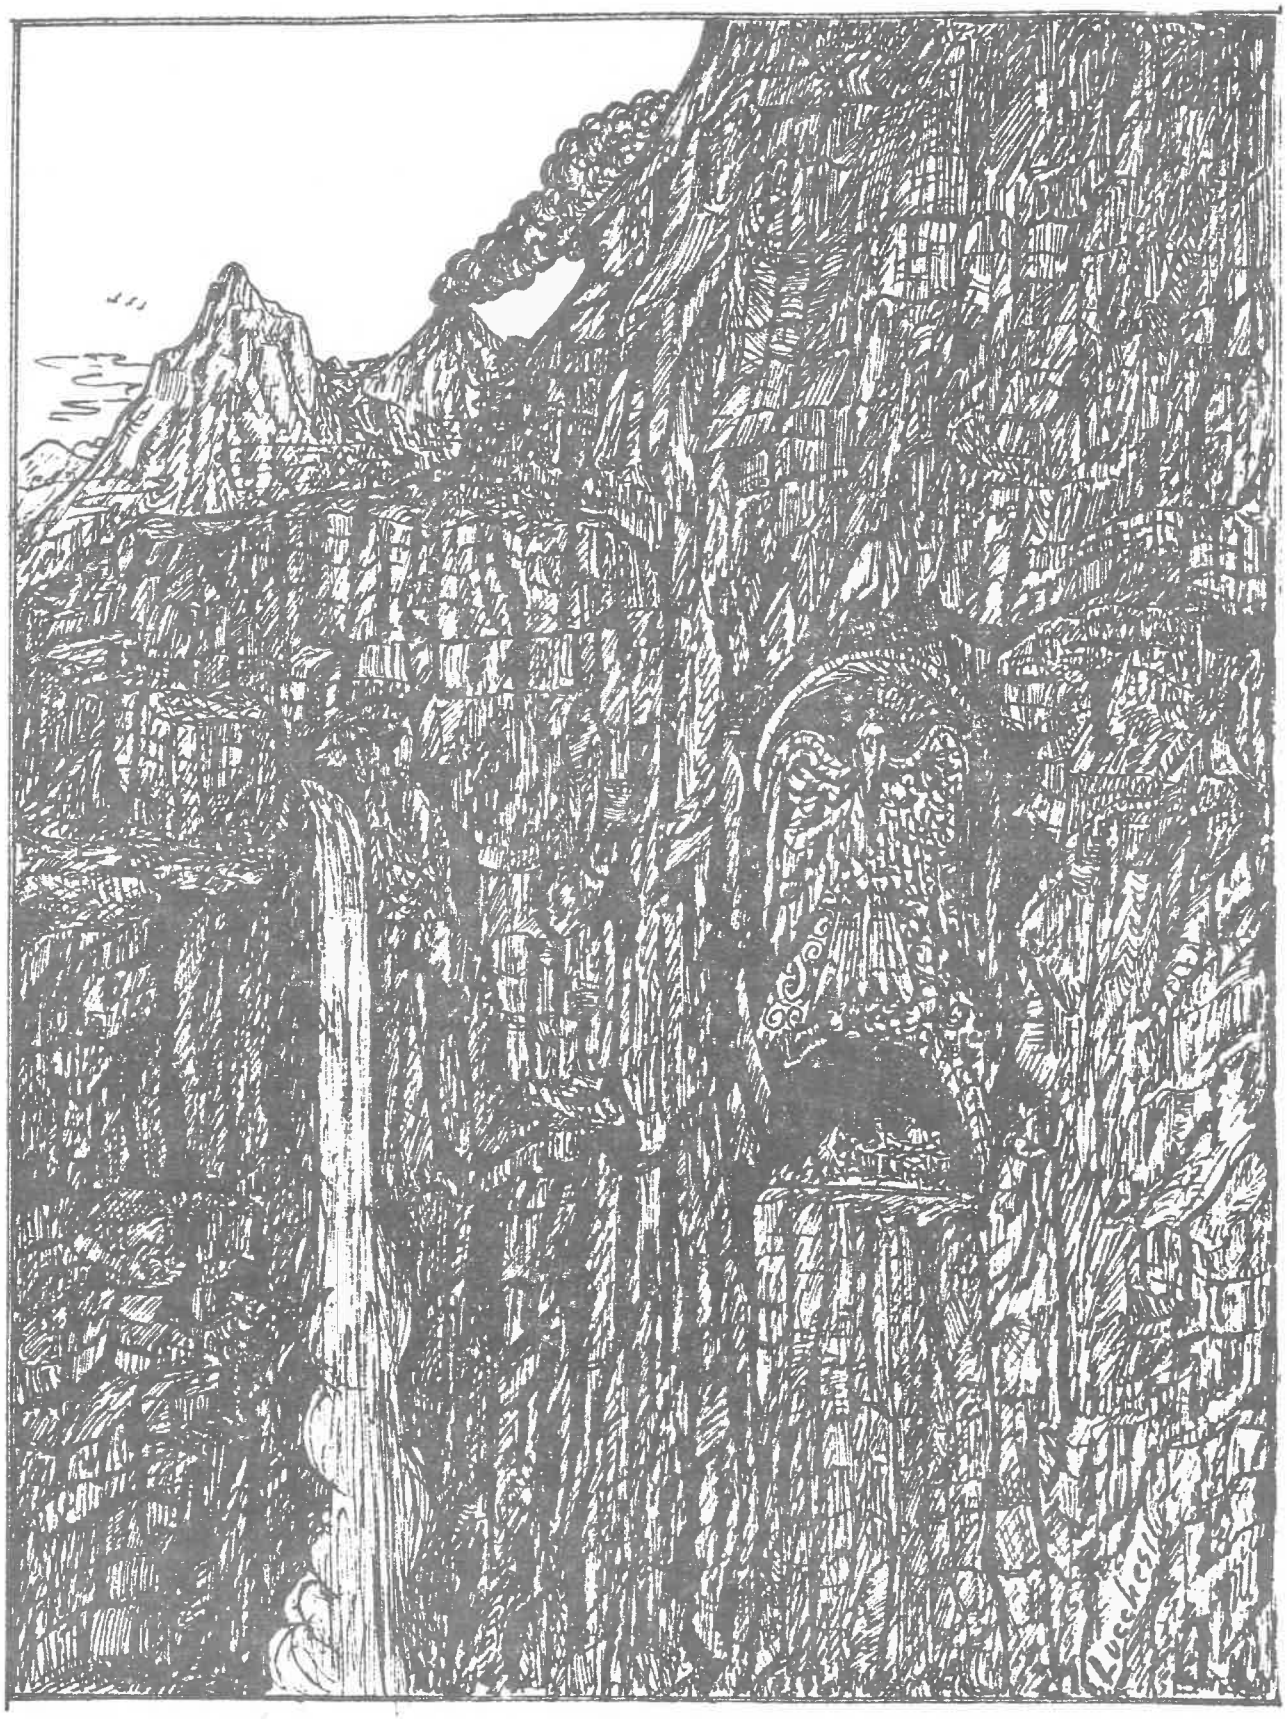
Q: Let me figure this out: You are 73 years of age, chronologically, and you are physically 38. In another 73 years you would be 146. 38+38=76. Will you look 76 physically 73 years from today or will you look the same?

A: What a strange question. Though I can deduce your reason for asking it. A person's total life span is hypothetical and is predicated upon many variables. As I stated earlier, the bio-technicians of Rin-2 achieved the prolongation of youth procedures in early 1932. Two thirds of the population was processed. One third had already surpassed the age limitation at which the methods were effective and did not receive treatment. I have begun to age at a normal rate at the age of 73. I received treatment when 16 years of age and have aged 12 years in a period of 47 chronological years. I should complete my normal life span starting from the age of 38. Using your method, 38+38=76 is a normal life span in some areas of Outside, but I am 73 at the present time and to all purposes should survive for at least another 38 years before terminating. This places the figure at a minimal 111 years.

You must also consider that various individuals age more rapidly than others, and retain youthful appearances throughout their lifespans due to the specific natures of their bio-chemical systems in combination with their modes of living.

Q: That means that in the year 2017 you will be physically equivalent to a person of 76, after having existed for 111 years. That's not too old, Eone.

A: I must remind you that a normal lifespan, even by Outside standards, should approach an average age of 130 when advances in medical technol-



Main entrance to Khoom

ogy are taken into consideration. As I stated in a previous conversation, the population on the Outside has become de-synchronized with regard to natural cycles of wakefulness, sleep, rest and ingestion of sustenance. Large quantities of toxic substances in food, in the air, and in many medications (which relieving one symptom creates other bio-physical problems) are also responsible for premature termination. Stress, created by general conditions on the Outside, is also a major contributor to shortening life, by causing a progressive imbalance of the bio-chemical system.

I will anticipate your next query by stating that the cause of aging is a gradual diminishing of a chemical secretion in a certain portion of the brain. This is that part of the brain which signals the cellular system to eliminate toxins and rebuild the various organs and structures which compose the body. As one progresses in time, this secretion diminishes in varying degrees, depending upon the genetics and general health of the individual. The bio-experts in Rin-2 isolated this substance and devised a means to synthesize it in the laboratory. The treatment for the life process consists of a three-month detoxification process of the neuro-muscular and circulatory systems. Both chemical and bio-electronic methods are utilized to achieve this result. A low toxicity diet and programmed exercise sessions are maintained during this period. The subject is then submitted to the pathologists who perform a complete micro-scan of the cellular structure of muscles, glands, and connecting tissue. This, after computation, determines the amount of Tempitol (the Rin-2 term for the chemical) to be injected into the system.

Up to the present time, the oldest person subjected to the longevity treatment has achieved the age of 79 chronologically, is still in good health, active and productive, and reasonable in appearance. The experts in Rin-2 have subjected the accumulated data to analysis and are relatively certain that the average lifespan of a Rin-2 person who has undergone the treatment will be in the vicinity of 130 years, the larger proportion of the lifespan having been achieved in a body which has retained its youth and potential for a period of at least 80 years.

Q: What about your life style and living habits? Does this also aid in maintaining youth?

A: If I were to indulge in the process of ingesting improper toxic substances into my system, such as toxic foods, alcohol, nicotine and other drugs used on the Outside, it would diminish the effectiveness of the longevity process in proportional degree to my excesses. But this is applicable to anyone, is it not?

Q: You told me that people in Rin-2 have family members on the Outside. Do they communicate with them?

A: Yes, quite frequently.

Q: How? Secret code, radio?

A: Of course not. Many communities within 200 kilometers of Rin-2 are equipped with dependable communications, such as telephones and postal centers. Air transport services are also available in many of them.

Q: Do I have this right? These relatives on the Outside believe only

that they have family members living as citizens of various countries in South America, with whom they communicate. It would work the same for other complexes, I assume?

A: I cannot speak for other complexes, were they to exist. As to your question, yes, not all have full knowledge of Rin-2.

Q: Does Rin-2 have racial preferences?

A: No. In Rin-2 a person is not evaluated on the basis of race or color, but on character, intelligence and potential.

Q: You used Mr. Home as a deliberate means of contacting me, didn't you?

A: Yes, I did. We have had intentions to contact you since 1957.

Q: Tell me why. And why the long delay?

A: Yes, it has to do with your ability to .....

(I do not want to pursue this part of the conversdation, other than that it deals with my selection of two individuals out of a group of almost 300 to befriend and question. They happened to be from Rin-2, and both promised to contact me in the future. I had almost forgotten the incident until Eone brought it back to my mind.

Another person, August C. Roberts, a close friend with whom I have lost contact, may still remember this occurrence. I pointed out the two persons to him and asked him to photograph them. Whether or not he did I don't know. I did not tell him of their origin. At that particular time I was not aware of it, although there was something about their idealized form and symmetry which struck me as very unusual. If Roberts should read this, perhaps he will remember the incident.)

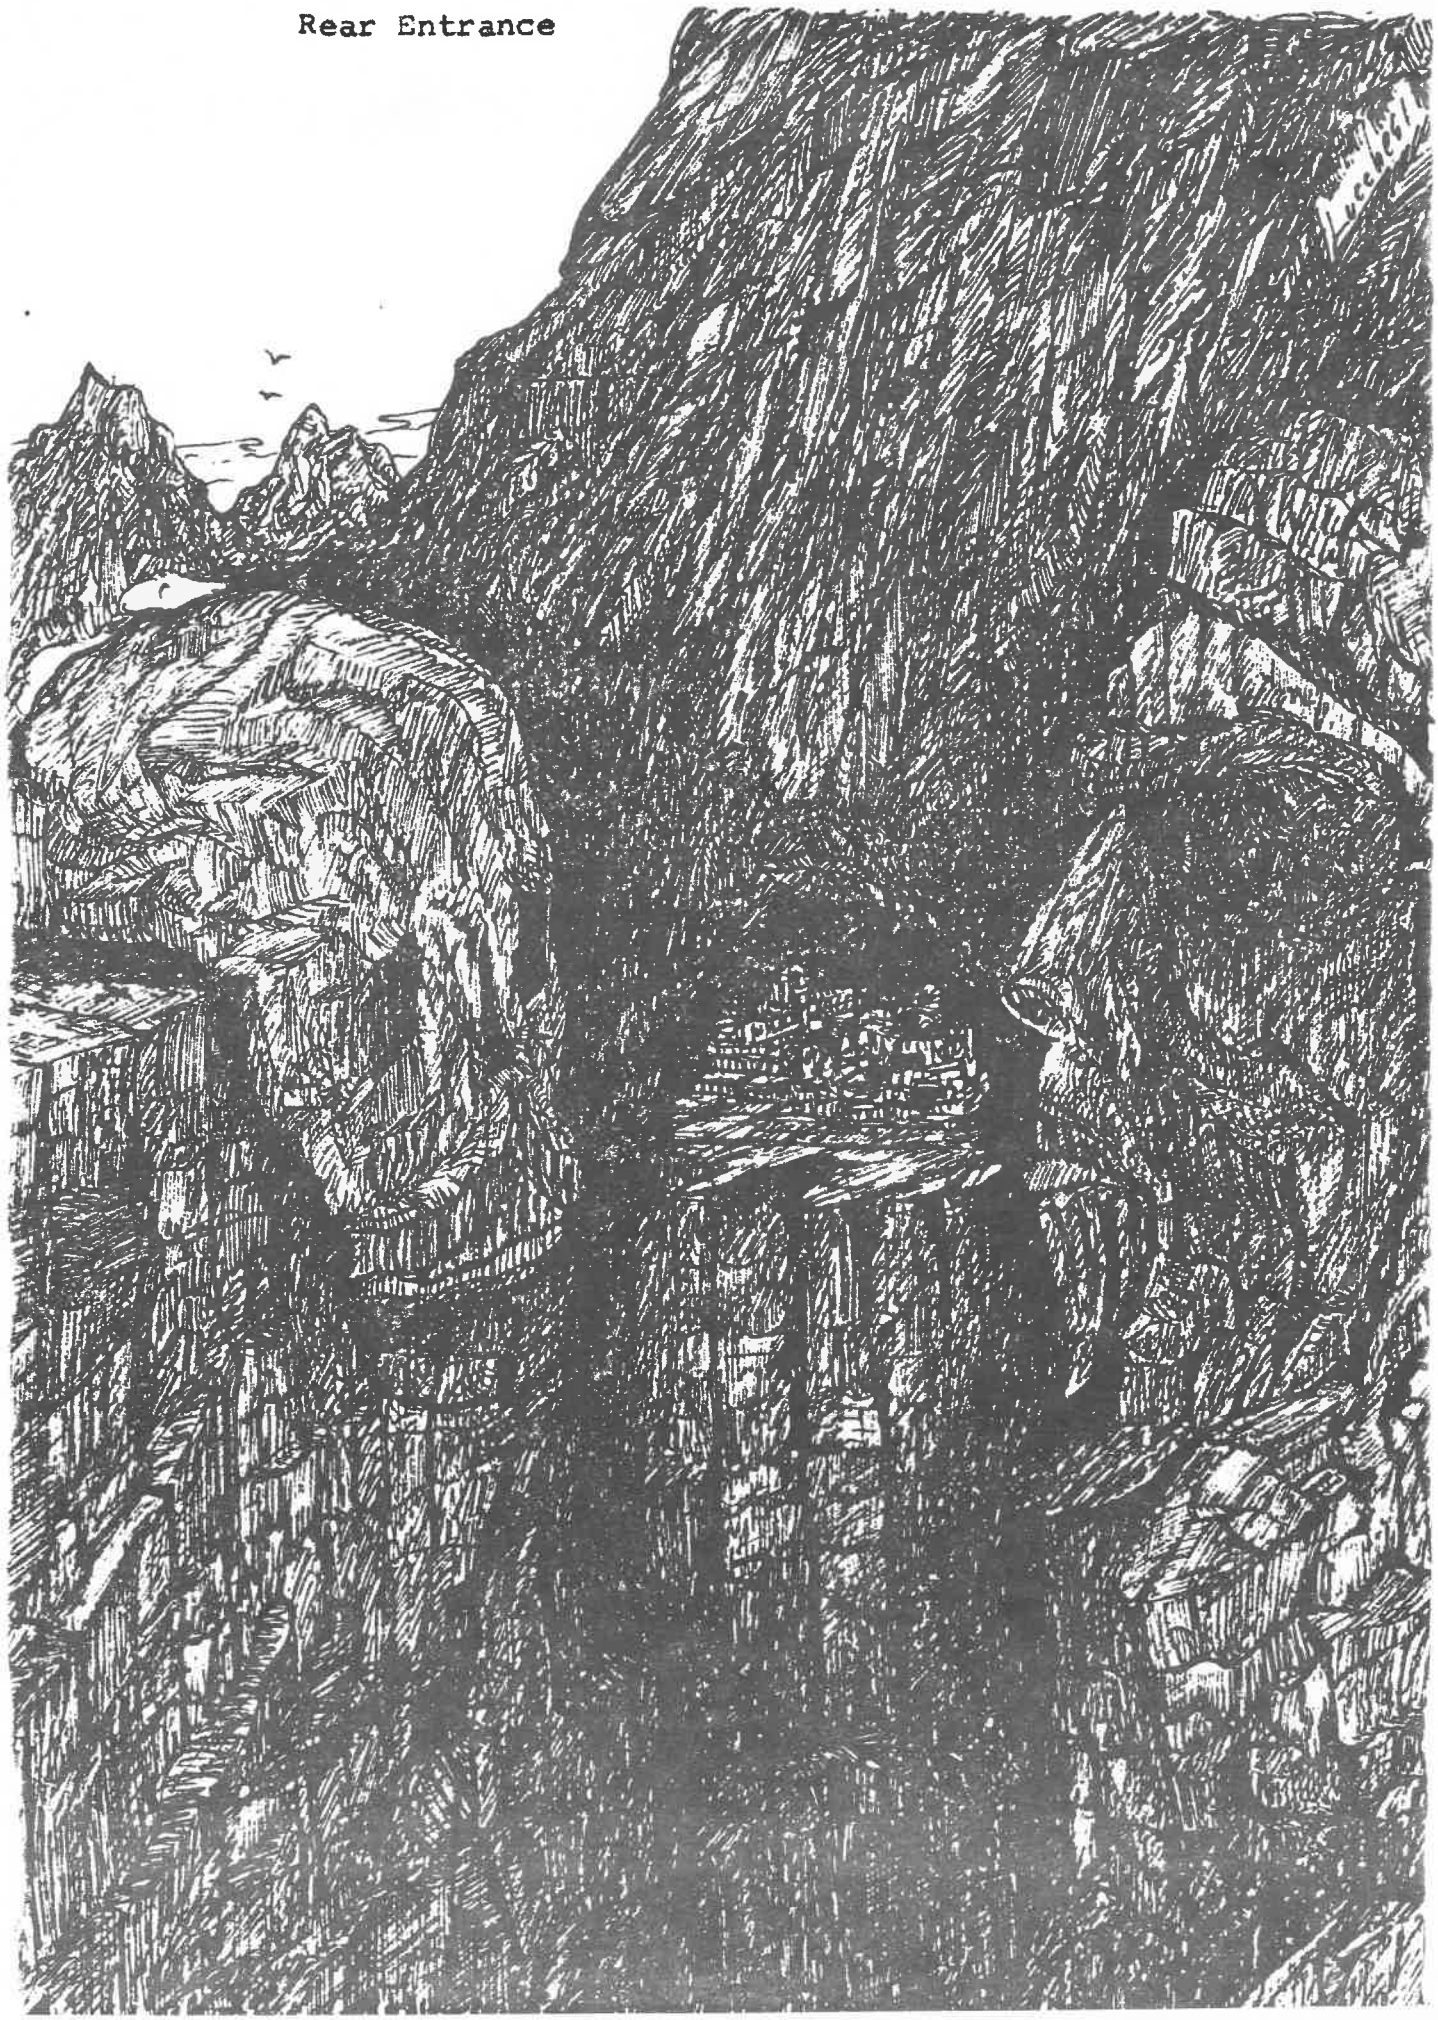
Q: I know I have asked this question previously, but for my own edification I would like a clarification: You said there were no parallel realities or universes. I think there could be.

A: If I recall, the conversation took place a few months ago. I did not say there were no parallel realities. I did say that we in Rin-2 had not developed any therories regarding that particular concept due to the impracticality involved. Do you feel there should be?

Q: I really don't know, Eone, but I thought you might.

A: I have no direct knowledge of the subject, but it is my personal opinion that should the hypothesis be correct we would never know, as the other reality would have no relation to our particular space-time frame. You see, it would exist on an energy level differing from ours and therefore that specific Time-Space Matrix would be completely isolated; the Time-Space-Energy Frame would require that it be 'shifted' out of phase to such a degree that no interaction would occur. It would be an entirely isolated and separate reality, and for all practical purposes or applications non existent. As I have stated before, our theoriticans in Rin have resolved the complexity of this frame, at this segment of time flow, in this Energy Matrix to a degree that the functions resolve into applicable and logical concepts which do not appear to require subjection of same to an external reality in order for the manifestations experienced as

Rear Entrance



a function of this, our 'reality.'

Q: I'm surprised at your answer concerning extraterrestrials, Eone.

A: I told you neither I nor the people of Rin-2 have in our possession any **direct** evidence of the arrival of intergalactic vehicles or beings on this planet or anywhere else in this solar system for that matter. As I related to you numerous times in our conversations of the past few years, we in the Rin-2 complex have been primarily involved in the problem of personal survival, building of the complex, assembling scientific data in the realm of biology and sub-particle physics, assembling the various Sky-Craft, constructing hydroponic facilities, and collecting botanical specimens on every continent of Earth. We have not as yet had the opportunity to indulge in the pursuit of knowledge concerning many of the subjects taught in your elementary schools. We have an extremely limited knowledge in the general subjects such as art, music, ancient history, oceanography, radio-astronomy, paleontology, ornithology, entomology, and other studies which, though they are of interest to us, we have not had the opportunity to pursue them. Our total knowledge of these subjects is dependent upon the stories told by the older persons of Rin-2 and by the monitoring of Outside radio and video transmissions. So as you must know at this time, our complex is what you would call alien to your concepts of culture. Our aims are different.

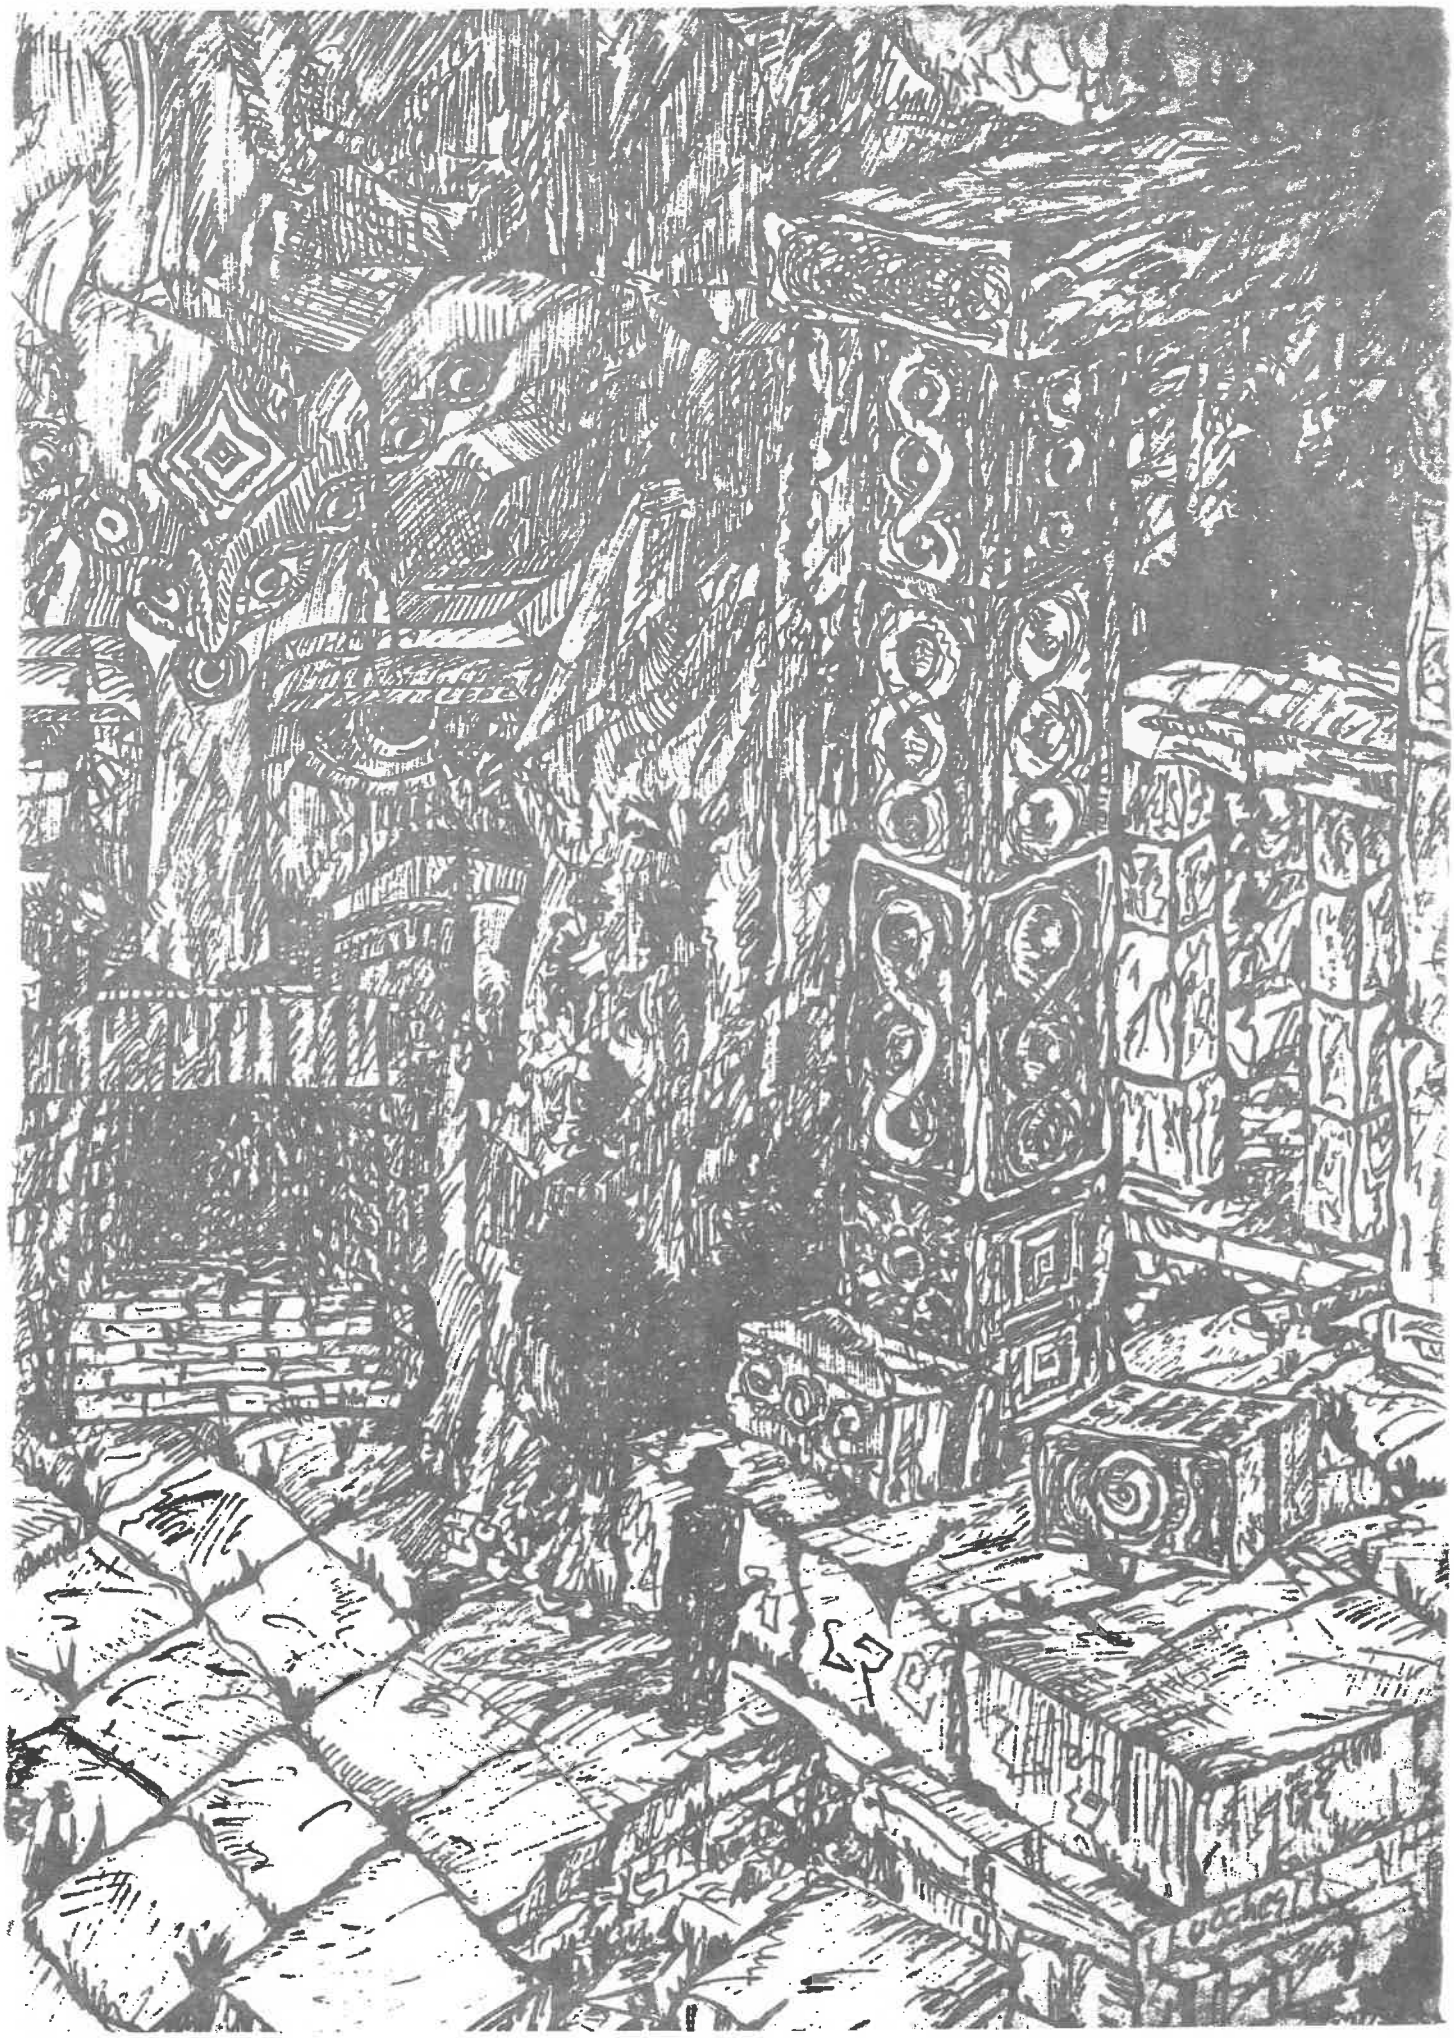
We do not desire control or power over others. We do not wish to acquire or retain material possessions other than those we need for subsistence. We do not interfere with the pursuits of Outside. We retain a mutual respect for each other. In a short time, even by your chronology, we have achieved the prolongation of life, the major conquest of most diseases, and a knowledge of the basic natural laws of the Energy Matrix. We labor together in harmony and mutual respect for each other, our only nemesis being the cephelocephalics and others who under Group control would attempt to destroy Rin-2 and plunder the ancient city of Khoom. Even so, we would not assume the initiative and harm them. You see, we may negate an ideal were we prone to do so; but we would never compromise our principles. To do so would defeat the very purpose for which we exist and the dreams of the fathers of Rin-2.

You have been searching for many years for alien intelligence. What you expect to gain or determine I do not know. No one can aid or assist the Outside in its endeavor to achieve a better world better than its people themselves, working in a mutual endeavor in accord with the natural laws of the Matrix.

I may have disappointed you when I have been unable to supply all the answers to your questions. Though I may be alien to your philosophy, I am not by any means all-knowing. I do not navigate the outer realms of the universe, nor do I captain diamond-coated craft with crystal propulsion systems. I am just a person with alien concepts and limited knowledge, a little too practical, perhaps, to appeal to your desire for the bizarre and the fantastic. I have begun to understand your way of thinking to a great degree, and I do respect it, though it is a divergent path from the one I follow - even though in your position I might be forced to do the same.

ENTRANCE

One of the three ground entrances to the ancient labyrinths that honeycomb the mountain of Khoom.



DISSERTATION BY EONE

The following remarks were recorded when I asked Eone about the Sky-Craft's propulsion systems. He stated that we would call it shaped-field-drive. When I asked if this were akin to anti-gravity, he offered the following:

Do you call your aircraft 'anti-air'? Of course not! I have read much of your literature, including many of your scientific proposals, during the past few months, and have found many of them to be invalid.

You should be concerned with and be capable of applying better means of discrimination to separate the real from the unreal. All scientific potential is displayed in truth and is evident in nature. By 'nature' I mean the totality of the observable universe. Man, fortuitously, is imbued with imagination, which, when used correctly, is of great aid in the advancement of culture, including art and science. Yet imagination, when permitted to manifest unchecked and undifferentiated from reality and potential possibility, can lead to odd concepts. Such as Force-Fields, Anti-Gravity, Warp-Drives, Mental Telepathy, and other practical imaginings too numerous to mention. Not of course that the pursuit of ideas, no matter how bizarre, should be negated, but that the foundation of what is real and what is unreal should be predicated on a solid basis of the ability to discriminate the possible from the improbable by converting the images you use. The terms should be converted to conform to a better comprehension of the observed phenomena as opposed to the wish-fulfillment portion of your ego. What I am attempting to convey to you is that the total reality is a functional derivative of the basic energic system which depends on the interchange and differentiation of the various forces contained therein. You see, by not attempting to counteract a force with a greater one, but, by modifying the source of the force, you can achieve a better and more subtle approach to extracting energy from the system.

Understand, there are not any Force-Fields, but only the modification of a loci in Sub-Space which would appear to the observer to be real.

In actuality, what would appear to the observer as a barrier would in fact be nothing more than the disruption or conversion of Sub-Plane Space into a Super-Plane Space condition. It is a modification of energy, rather than an application of same. You would be extracting energy rather than applying energy. Do not confuse emission in any form with a Force-Field. A true barrier imagined as a Force-Field is a wafer thin slice of nothing, a lack of, a 'no-thing,' and therefore cannot be penetrated.

I have stated the above as an example to illustrate how terms can act

as a retardent to the practical application of a concept. A beter term would be extraction-vortex.

Telepathy between two minds directly? No. All minds occupying a common positional segment of Space-Time? Yes.

Anti-gravity? No. Utilizing the basic concept of a cause to react within the confines or reference of a specific field selectivity? Yes.

Warp drives? No. Light speed a limiting velocity? Yes.

Inter-galactic flight? Possible. But not practical at present levels of life expectancy. Of use to no one in existence at the time of its inception, nor in all probability at the conclusion. For during the interim Earth's chronology would have advanced, the time counted in centuries, rather than years. Therefore it is dubious as to what significant contribution it would offer.

As you can and must see by now, a practical approach to various problems is more sensible and certainly more rewarding.

You see, the Universe is an extremely dynamic concept in the eyes of the observer. We instinctively attempt to oppose or convert the energy therein by the direct application of force rather than attempting to consider utilizing more subtle methods of deriving the desired results from the Matrix of the Energy Systems which surround us.

Understand: All Matter, all Energy, all Mind are integral components of a cosmic totality manifesting in the form of interactive fields which create by permutative statistical dispersion the comparative appearance of unity and coherence in Sub-space time. The phenomena we call reality is the result of the temporary subjective illusion of an existing entetic faculty to think, observe and experience what we call an externalized environment, from what would appear to consist of an objective position within the confines and dimensional loci of a specific segment in time.

Sentinent life cannot literally externalize into the system, for the reason that it is physically an internal component of the temporal Matrix which forms and consequently 'holds' the total energy pattern in manifest rigidity, therefore creating a coherent differential within a specific space-time frame of reference.

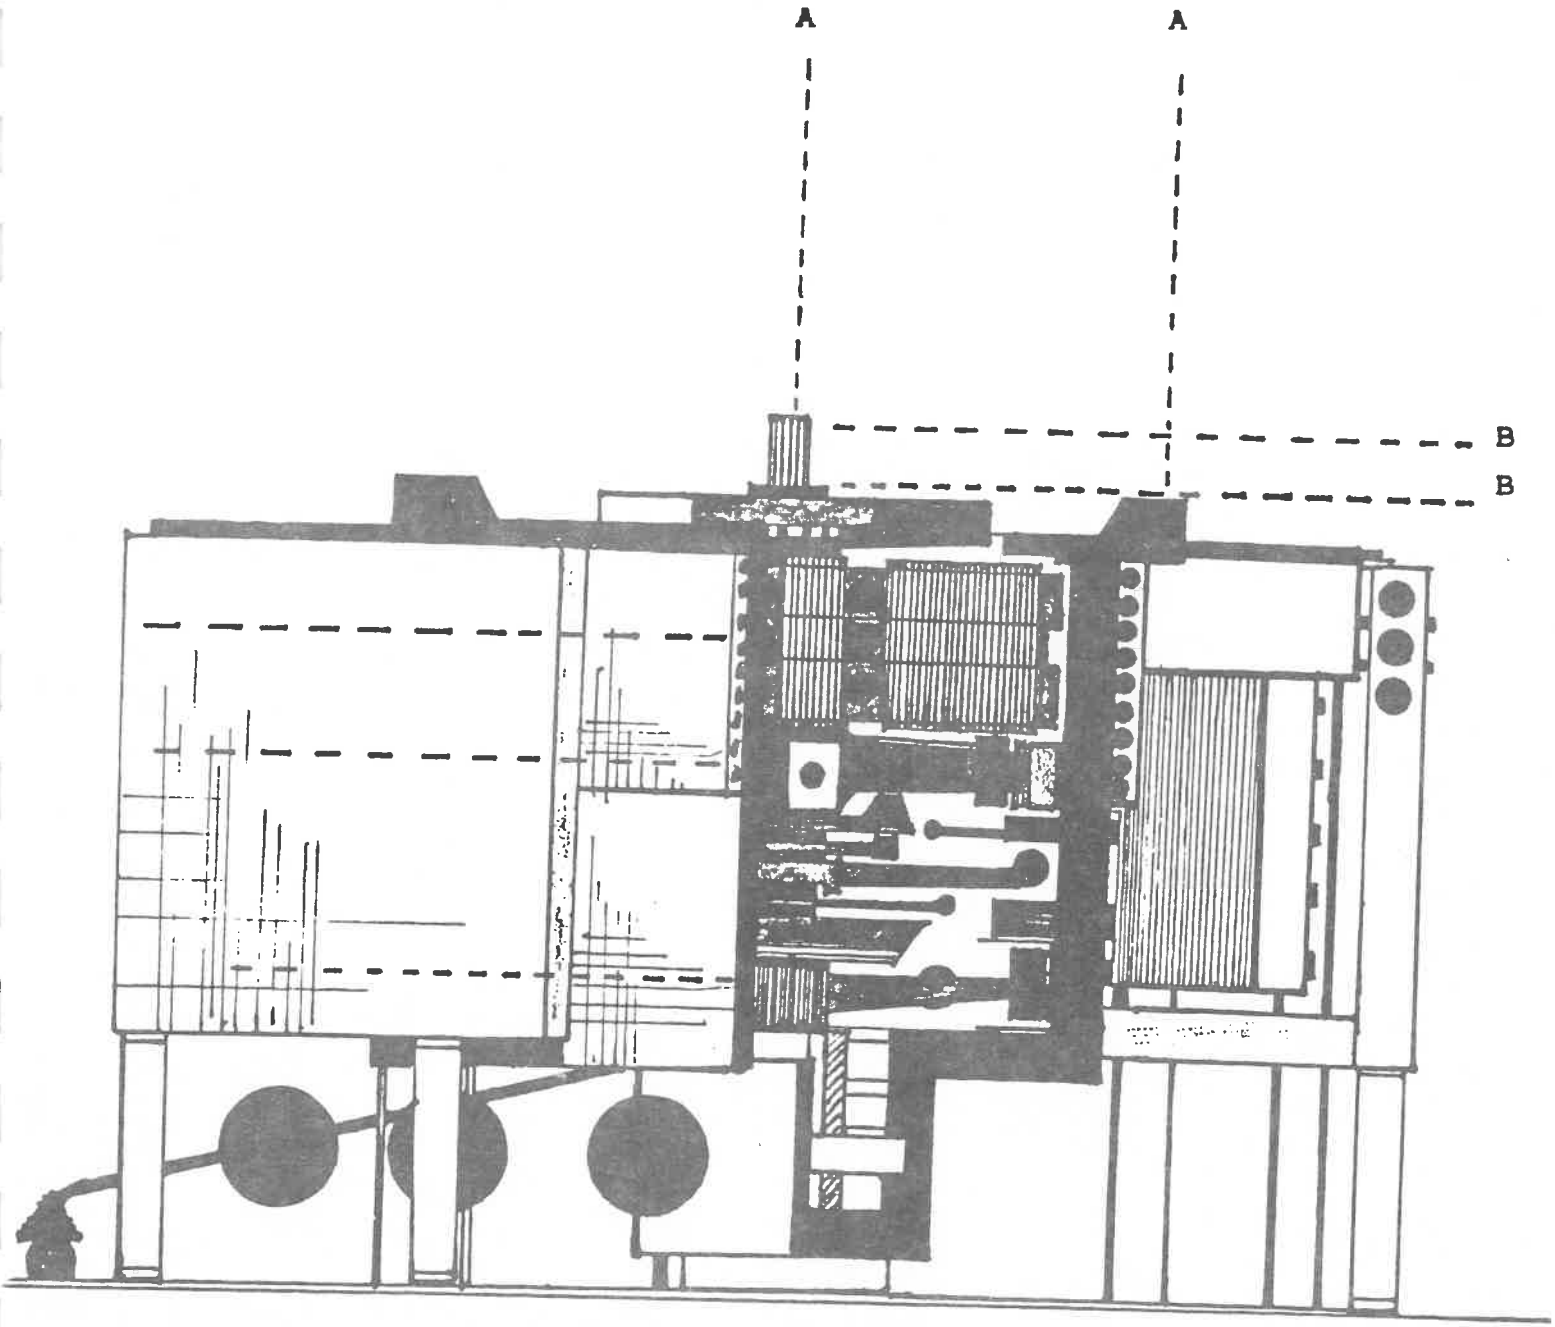
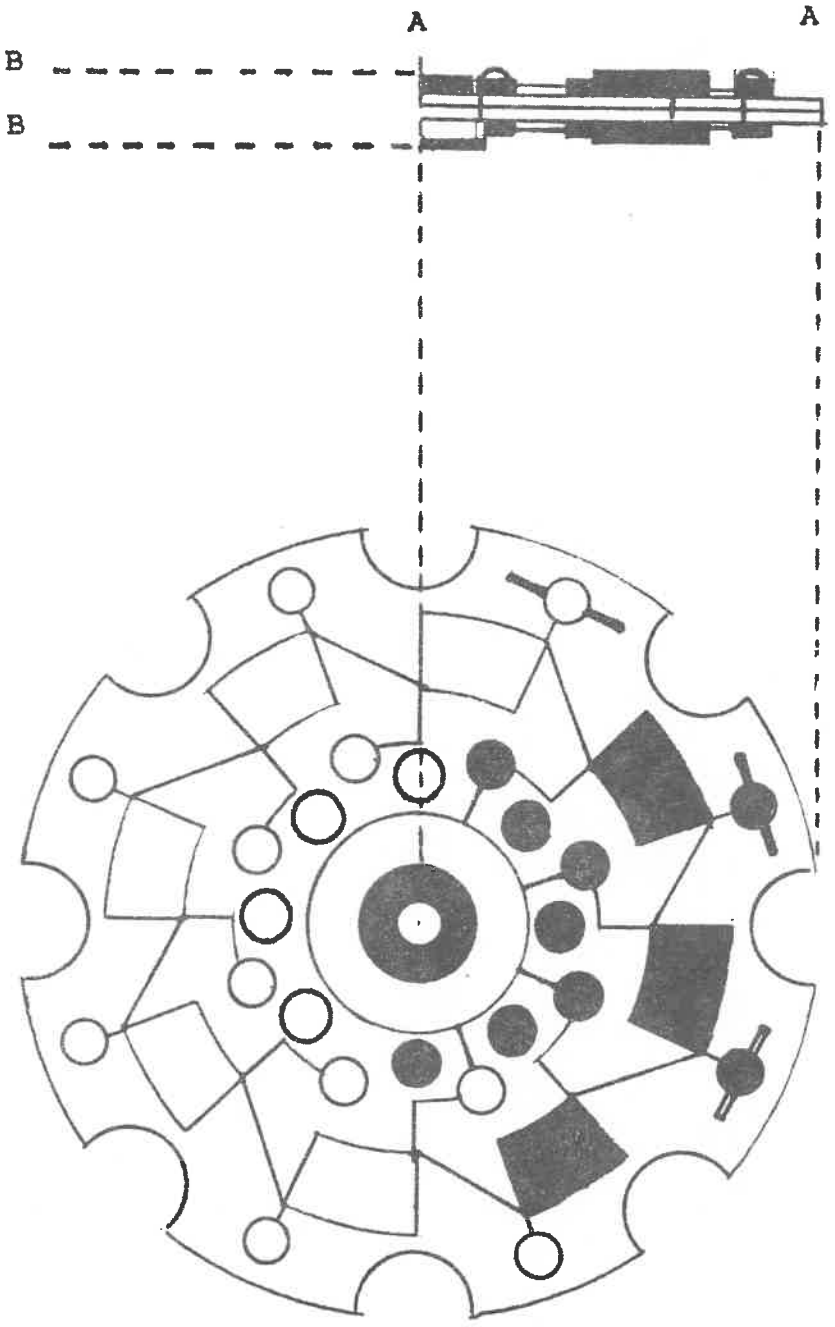
1938--Version



FIELD MOTOR- TOP VIEW- (UPPER ROTOR REMOVED)- See Section Three.

TOP ROTOR.



Below are answers Eone gave me to questions regarding his frequent referrals to Sub and Super-Plane space and the Reality Matrix:

Understand: Super-Plane and Sub-Plane Space are representative of a flow, a polarity. As to the difference between plus and minus, matter and energy in various aspects of concretion and duration, the plus side produces the quantized mode of matter and energy within a given time-space frame of reference. The minus in diametrical opposition creates the return conduit for absorption of primary energy which retains the balance and stability inherent as a characteristic of the prime-point-matrix.

Super-Plane Space represents the characteristics of permeation, stratification and convergence in space-time or Matrix-T stability. Plus and minus functions are representative of dilation and contraction induced within the boundaries of a given frame or sphere of influence.

All reality consists of the discontinuity created as a result of the statistical stress factors caused by permutation within the energy field's primary structure and the dispersion of sub-particulate energy in T-Space. The reality structure on one side of the full wave cycle created by the modulated energy level exists as a measured interval in space-time. The amplitude determines field potential by incremental steps, producing the symmetry of duration. Modifications within the prime-point matrix or fabric of the original stable field result as a consequence of the cohesive characteristics of the elementary energy as contributed and produced by stratification in the otherwise diffused grain or structure. This is a result of the patterned distribution of kinetic energy and charge, creating a degree of density using as a transducer the catalyst of collective-mind in a given loci of space time.

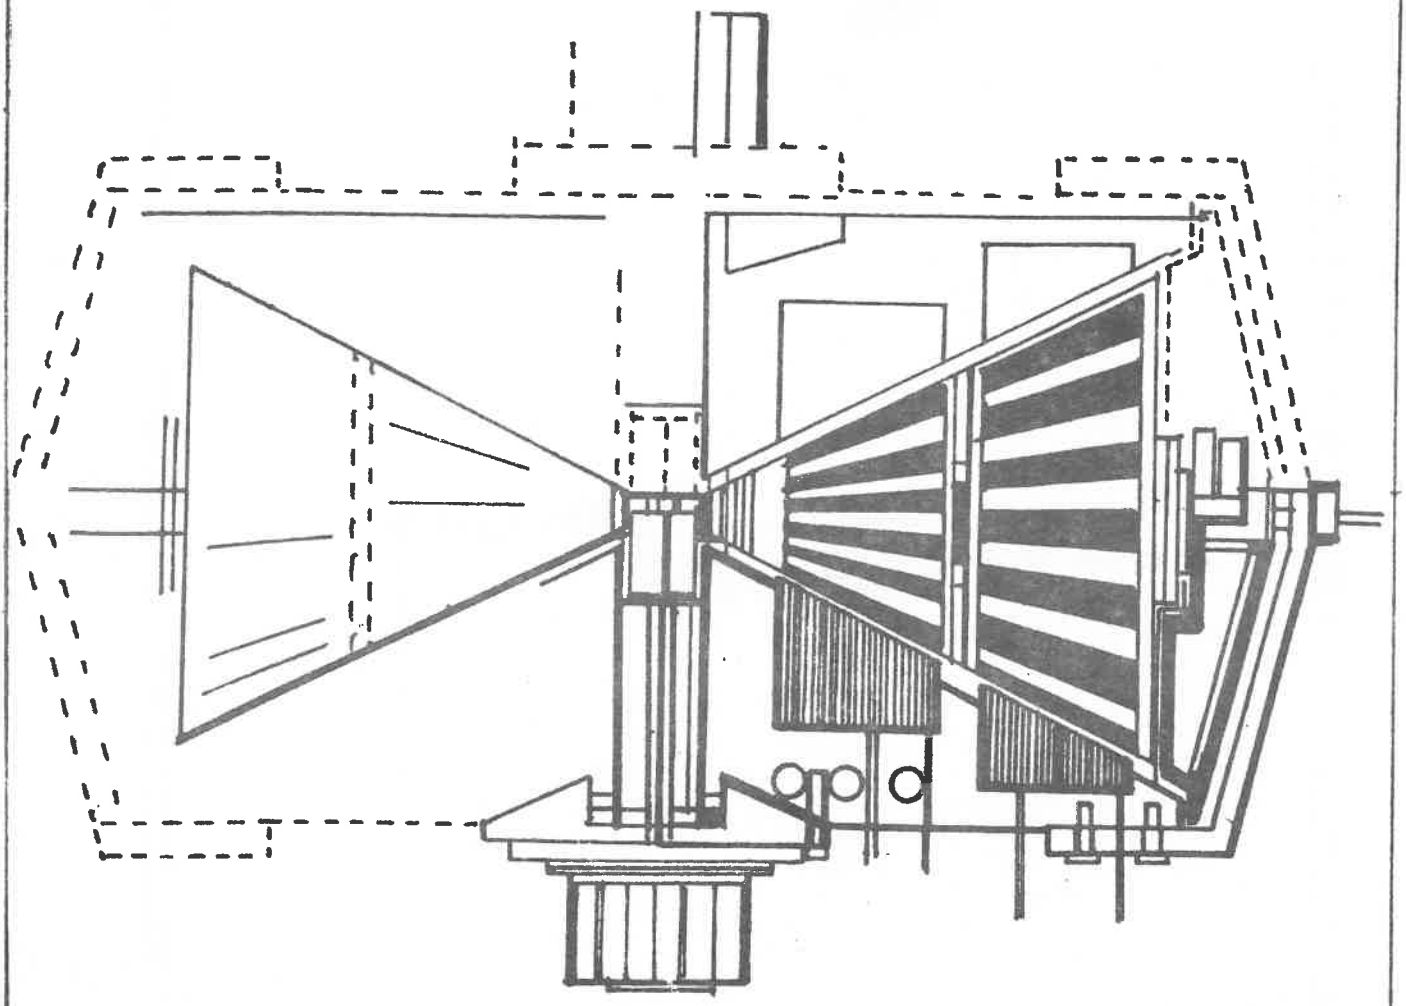
In viewing the matrix a certain degree of statistical randomness appears evident to the observer. This is a consequence rather than a characteristic of the basic impetus, and could be termed interval-lock.

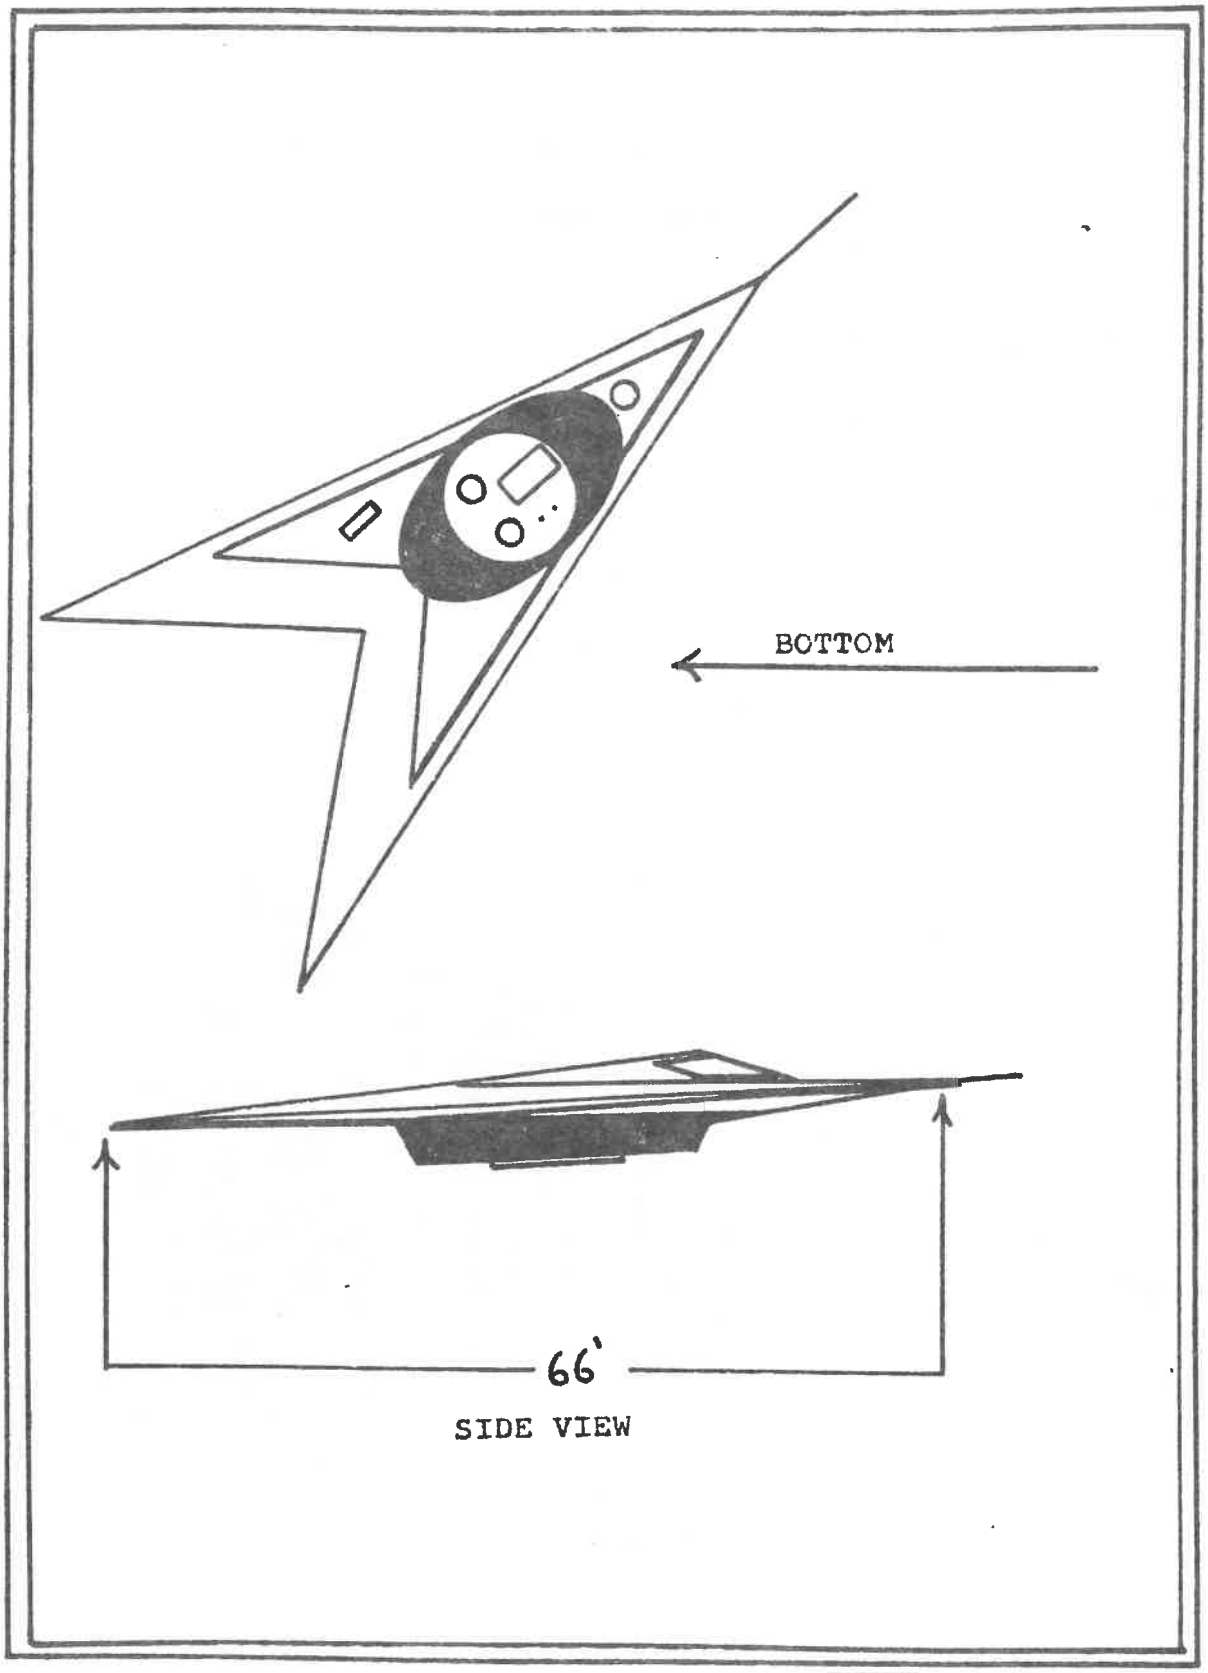
Viewing the universe we see the inversion, not the expansion. The bi-location of the energized polarity by diffusion, dilation, and statistical conversion creates the content, extent and quality in the basic fabric of substance and form. The apparent centricity and exteriorization follow as consequences and appear to possess characteristics of intensity, energized polarity, and time as the resultant zone of influence. Shape and form are the results of condensations in a specific loci of space-frame manifesting by degree, dependent on the quantity of energy locked onto the locale influenced by the matrix. The result is the illusion of externalization created by geometric patterns inherent in mind-field discharge.

Light speed is the propogational limit between matrix plus and energy minus circumscribed in the prime-point matrix. Reality is produced in ratios rather than discreet increments. All reality, matter, mass, are nothing more than matrix energy displaying various aspects of dispersion and density, time acting as the zone of interchange and flow created by the inversion and determined by the energy content and distribution, impelled out of synchronous phase in relation to the elementary and collective unity of the singularity of the matrix.

FIELD MOTOR

Newest version, developed 1976





THE LATEST CONFIGURATION FROM RIN-2

This craft was developed during 1976-1978, and three were constructed to replace the circular configuration. This craft does not utilize the rotor-sequencers and incorporates the new type field motors. UFO observers will probably view these more frequently in the future.

NOTE FROM THE CONCLUDING INTERVIEW

Q: How large is the complex of Rin-2?

A: The complex consists of an area of 0.617 kilometers.

Q: How many of your people live in the Ancient City/Khoom?

A: None. We avoid the area. Protective clothing and respiratory apparatus is worn by the philologists and geologists who study that section of the mountain. High ionization zones are encountered in many of the passages beneath the ruins. The section in which the temple is located is tolerable. Rates average in the vicinity of about 3.0 M/R. But it is cumulative and best avoided.

Q: What is the cause of the high radiation?

A: It appears the high radiation areas are strategically located in the complex maze of passages beneath the ancient ruins. It is probable that the initiates of the temple possessed a full knowledge concerning the complexity of the tunnels involved and could bypass the dangerous zones which were deliberately fabricated to trap any transgressors who may have attempted to gain access to the complex above.

Q: Who were the priests of Khoom?

A: No trace of any kind has been discovered which would indicate their identity or origin. Bilingual texts dating from various eras in Earth's history do indicate that the place was visited by what in all probability was an inner circle of initiates.

Q: What are the future plans for Rin-2?

A: There are no plans for an extended future in Rin-2. Our geologists have recently informed the people that seismic disaster is inevitable. Recent measurements of shifts in the sub-strata in the area have been computed and indicate that quakes and volcanic eruptions will destroy the complex. But before this occurs the entrance to Rin-2 will be sealed and the people of the installation will evacuate to Outside.

We are few in number and will maintain a low profile. We will not be noticed in your society. We will maintain our policy of non-interference, but continue to leak certain knowledge that we have accumulated to various establishments and agencies on the Outside. We will not, however, contribute or disseminate any information relating to the Group, or data relating to devices which could be applied to systems of a destructive nature, nor will we release information that may have a tendency to increase population or produce longevity beyond the normal lifespan. That is our decision.

Q: What will you do with the Sky-Craft?

A: They will be concealed in strategic locations on the Outside.

Q: Eone, I know I have asked this question before, but it is possible that I have not been able to understand your answer to my satisfaction. I

repeat, Eone: Why in the world are you telling me all these things?

A: I presume it is difficult for you to comprehend, but I have stated many times that the existence of Rin-2 is not a secret. Many people on the Outside are aware of the existence of such a place. The only information that has been kept from Outside is the actual location. We have spoken with many people on the Outside over a period of many years. They have presumably chosen the prerogative to remain silent, due to the fact of being unable to supply evidence to reinforce their credibility. The small degree of information I have imparted to you is of no specific or immediate benefit and would require the coordinated efforts of more than one expert in the fields of physics, chemistry, mathematics and metallurgy. A warning regarding the application of mind control would be a small contribution on my part for the benefit of humanity - but only a small percentage who have already considered the implications will benefit from the information.

The total history of this planet Earth has taken place in what is a short period of measured time. Upon examination the relative importance of events in general neither detract nor contribute to infinity.

Only those with extreme vision and insight can see beyond the mirage of reality, thus assured by their individual substantiation of truth. They are aware of their relationship to the Matrix of Eternity, Nature the teacher, Science the measure. The individual mind and self the Instrument.

I must now return to Rin-2. A few years will pass before we meet again. Goodbye my friend.

Q: It's statistical, isn't it, Eone?

A: Yes, you are learning.

Goodbye, Eone.

EPILOGUE

That was the last I saw of the person known by the designation, "E-1-E." I enjoyed conversing with him, as I hope the reader has enjoyed the preceding transcripts. Eone did supply me with certain bits of evidence to substantiate his account. What I have presented should be obvious and self explanatory to the reader. As I have stated previously, under no circumstances will I place myself in a position of obligation to prove any of the statements contained in this report. Nor do I feel it incumbent upon myself to substantiate any of the theoretical hypotheses I have included and stated as part of my personal opinions. Where I have done so I have so stated.

I did not include all of the questions and answers recorded - not because I do not trust Eone's judgment that this information would not disclose data that might bring harm to him and Rin-2, but because certain readers might react in a fearful manner, rather than acceptance and understanding.

(This presentation prepared during 1979-1982 and placed under seal in my safety deposit box in June of said year. Not to be disseminated until 1984.) D.C.L.

THE SKY-ISLAND

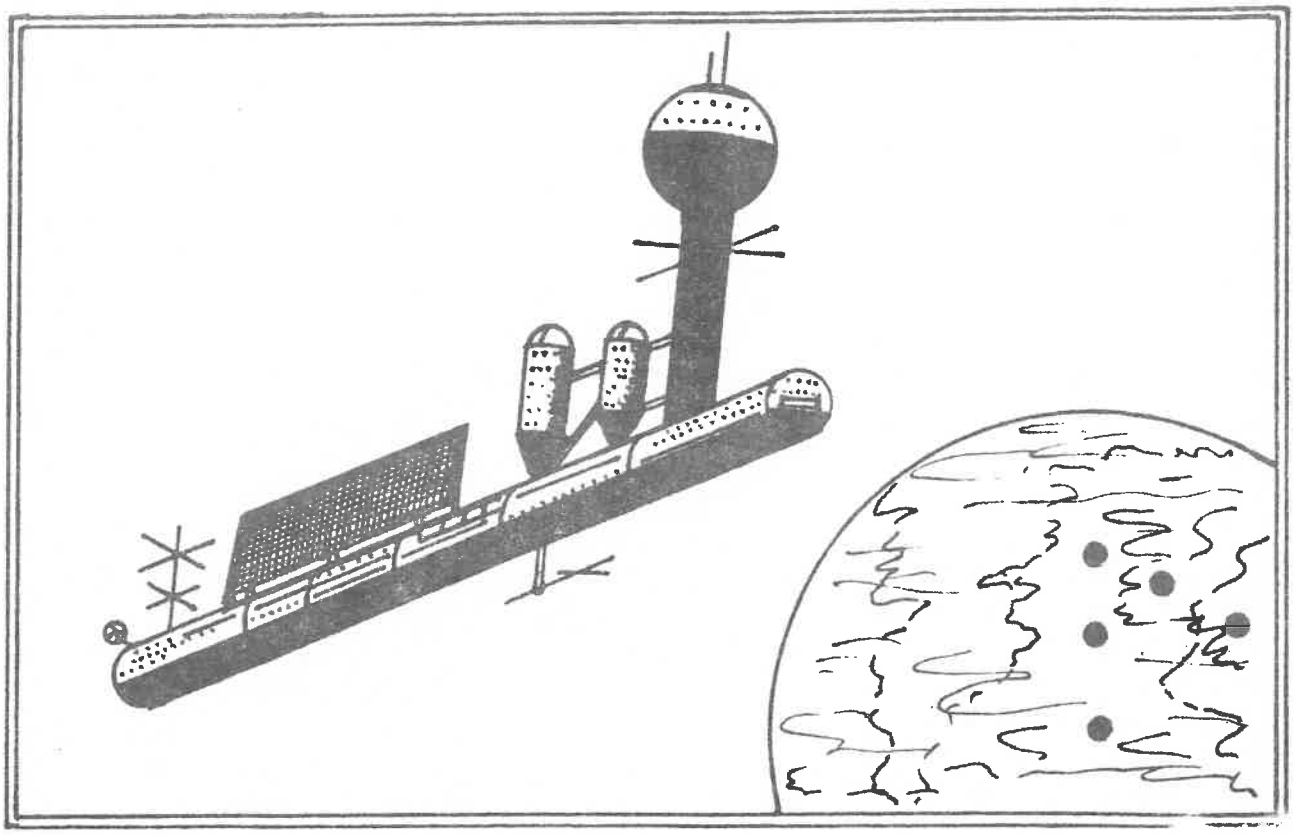
A space complex, built and maintained by members of "The Group," and staffed by the acromegalic cephelocephalic anomalies (small men with large heads) for purposes of conducting experiments in bio-chemistry and longevity. The main body of the space complex is 2.413 kilometers in length and 216 meters in diameter. It is estimated to accomodate up to 34 "Group type" circular craft, manufacturing facilities, laboratories, and rest dormitories for the use of surface members of 'The Group.'

In 1980 the complex was in synchronous orbit of the Earth between South Latitude Zero and 15 degrees, and Longitude 45 and 60. I did not determine the reason for the orbital shift of the complex, for it is usually maintained at South Latitude 135 degrees, Longitude 30 degrees.

I would like to add to the fact that the Sky-Island is equipped with a most advanced system of evasive measures, with electronic devices which cause it to remain impervious to normal means of detection. However it is my **opinion** that it has been visually observed many times by ground observers and astronomers, and was in all probability observed by our astronauts, who in turn may have been given orders not to reveal its existence. Though it is a **conjecture** on my part, the orders likely were diverted through channels by the Group.

It is Eone's contention that many natural disasters, such as small earthquakes, explosions, UFO sightings and other such things have been triggered by the Group as diversionary phenomena to cover up the removal of materials sent into space for the construction of the complex, and that many of the contactees were induced to believe and propound intergalactic realms as being the origin of the saucers. All of this may have been promulgated to confuse and confound the various conclaves of researchers in their attempts to "solve" the Flying Saucer enigma. It becomes obvious that the present inclination is to look up, when I think it is time to look **around** us and **down**, if we are to discover the source of the disturbances.

I cannot emphasize too strongly, that if any researcher should come into documented evidence or "proof" of the above, **DO NOT - I repeat, DO NOT REVEAL IT IS SUCH. SPEAK ALL YOU WANT TO. WRITE ABOUT IT. BUT DON'T PROVE IT BEYOND A CIRCUMSTANTIAL ASPECT. OTHERWISE DIRE CONSEQUENCES COULD RESULT!**



THE SKY ISLAND

KHABARAH-KHOOM

An idealized representative drawing of Khoom, reconstructed from Eone's description, appears on the following page. It depicts the ancient city as it may have appeared 8,000 years ago, before tektonic shifts destroyed portions of the wall (see bottom foreground) and the Sphere of Ogygo still rested on its pedestal.

The philologists of Rin-2 have uncovered bilingual texts which indicate that Khoom had been visited a number of times in the distant past by inner circle initiates and scribes who possessed the key to the ciphered scripts and languages used in the ancient city. These texts deal with rules, behavior, myths and legends, and do not involve the technical aspects nor translate the scientific texts of the mysterious priesthood of Khoom. One of the texts describes an object called by the ancients of Khoom the 'Sphere of Ogygo,' which rested on a pedestal outside the temple. According to legend, the sphere would emit a low humming sound at unspecified intervals and was believed to have originated in the void of interstellar space. The sphere was 12 meters in diameter and was considered to have a relatively low mass, though the ancient artificers of Khoom could not penetrate the material with the tools at their disposal. As the sphere was not present when the founders of Rin-2 arrived at the site of the ancient city, speculation about its origin is difficult. It is believed by the theoreticians of Rin-2 that the sphere became dislodged from its pedestal during a tektonic upheaval which destroyed the wall and part of the ledge on which it stood, and that the sphere or fragments of same rest in the unplumbed depths of the bottomless chasm (See picture).

I feel that the above account is one of the few allusions that I could derive as to the possible existence of ancient astronauts.

"Rin-2" is my appellative replacing the alpha-numeric "R-1-N-2," which is used by the inhabitants of an environmental laboratory complex located in the base of the mountain, 1.697 kilometers below the ancient city of Khoom. Rin-2 was constructed and is maintained by a small group of dedicated individuals of both sexes who are mutually pursuing the accumulation of knowledge in the fields of biology, physics, chemistry and human relations. The population is controlled and maintained at a fixed level of less than 600 people, all working in mutual accord and following the philosophy of the original founders, which was predicated on the basis of a positive and creative system, leading to greater progress, peace and mutual respect among the inhabitants who collectively pursue the accumulation of truth, peace and reason in their daily endeavors. The complex is powered by geothermal energy, and the population of Rin-2 all cooperate in the maintenance of the hydroponic facilities which supply sustenance and grow a variety of plants which are converted into medicinal extracts.

The standard mode of apparel in Rin-2 is white cotton coveralls of common cut and design worn by both sexes, and purchased from a manufacturer in the midwestern U.S., as are many of the other commodities

such as machine parts, electronic components, test equipment, etc. Others of a specialized nature are fabricated in the machine shops and laboratories of Rin-2, which possess the proper facilities to produce certain components for advanced devices, using a technology not yet available to Outside.

When I asked Eone how the secret had been maintained for a duration of 53 years, he informed me it presented no difficulty for the reason that the only information witheld was the location of the complex. He claims that many people have speculated as to the existence of such a place, but have not been able to furnish proof of same. All business on the Outside is conducted on a legitimate basis. Use of the Sky-Craft is kept to a minimum. The Group knows of its existence. Rin-2's policy of non-interference in Outside affairs acts as a major factor in maintaining its relative security. Who would be concerned as to whether it existed or was non-existent except those with criminal intent and purpose who may wish to plunder Khoom or commercialize on the technology of Rin-2?

KHABARAH-KHOOM and/or KABARA-KUUM

A pre-ancient temple complex, located in a huge cavern which pierces a mountain somewhere in the lower half of the West coast of South America. Khoom is 1.67 kilometers above sea level and is uninhabitable due to excessively high levels of radiation in the area of the ancient temple and the structures and ruins surrounding it.

The main temple (still intact) contains a large entrance hall or collonade, on each side of which stand 3 1/2 meters high figures which form a pantheon of the Gods of Khoom. The statues are constructed of priceless metallic elements such as platinum, iridium, gold, silver and other rare-earth materials, and comprise sub-components of what may be considered an enormous ancient machine or device, the purpose of which has not been fully determined by the scientists of Rin-2.

Clarifying a point concerning the appellation, Khabarah-Khoom, this term was assembled from a document supplied by Eone which supposedly translated the phonetic equivalents of the coded symbol writing found in the ancient vaults under the temple. The strange writing was a ciphered script used exclusively by the priest-scientists of Khoom and not common among the people of the world existing at that time.

Not being a philologist, I find it difficult to determine what may have been the actual phonetics applied to the characters. It could be "Churu-bu-Chuum," "Khabarah-Khoom, "Kabara-Koom" or some other odd-sounding term. "Khabarah-Khoom" seems to work out, though the philologists of Rin-2 refuse to finalize a specific translation and still refer to it as the Ancient City.

My theory is that the crystal-sphere, centered under the dome (see illustration) was activated by psychotronic methods causing the altered molecular structure within the device to direct the energy to the apparatus in the temple complex. This could explain the apparent absence of control panels or systems, as none have been discovered by the technicians of Rin-2. Perhaps by utilizing certain chants and mantra in proximity to the sphere the scientist-priests of Khoom could selectively activate the twelve machine gods in the pantheon to transmit their wishes or control their constituents the world over.

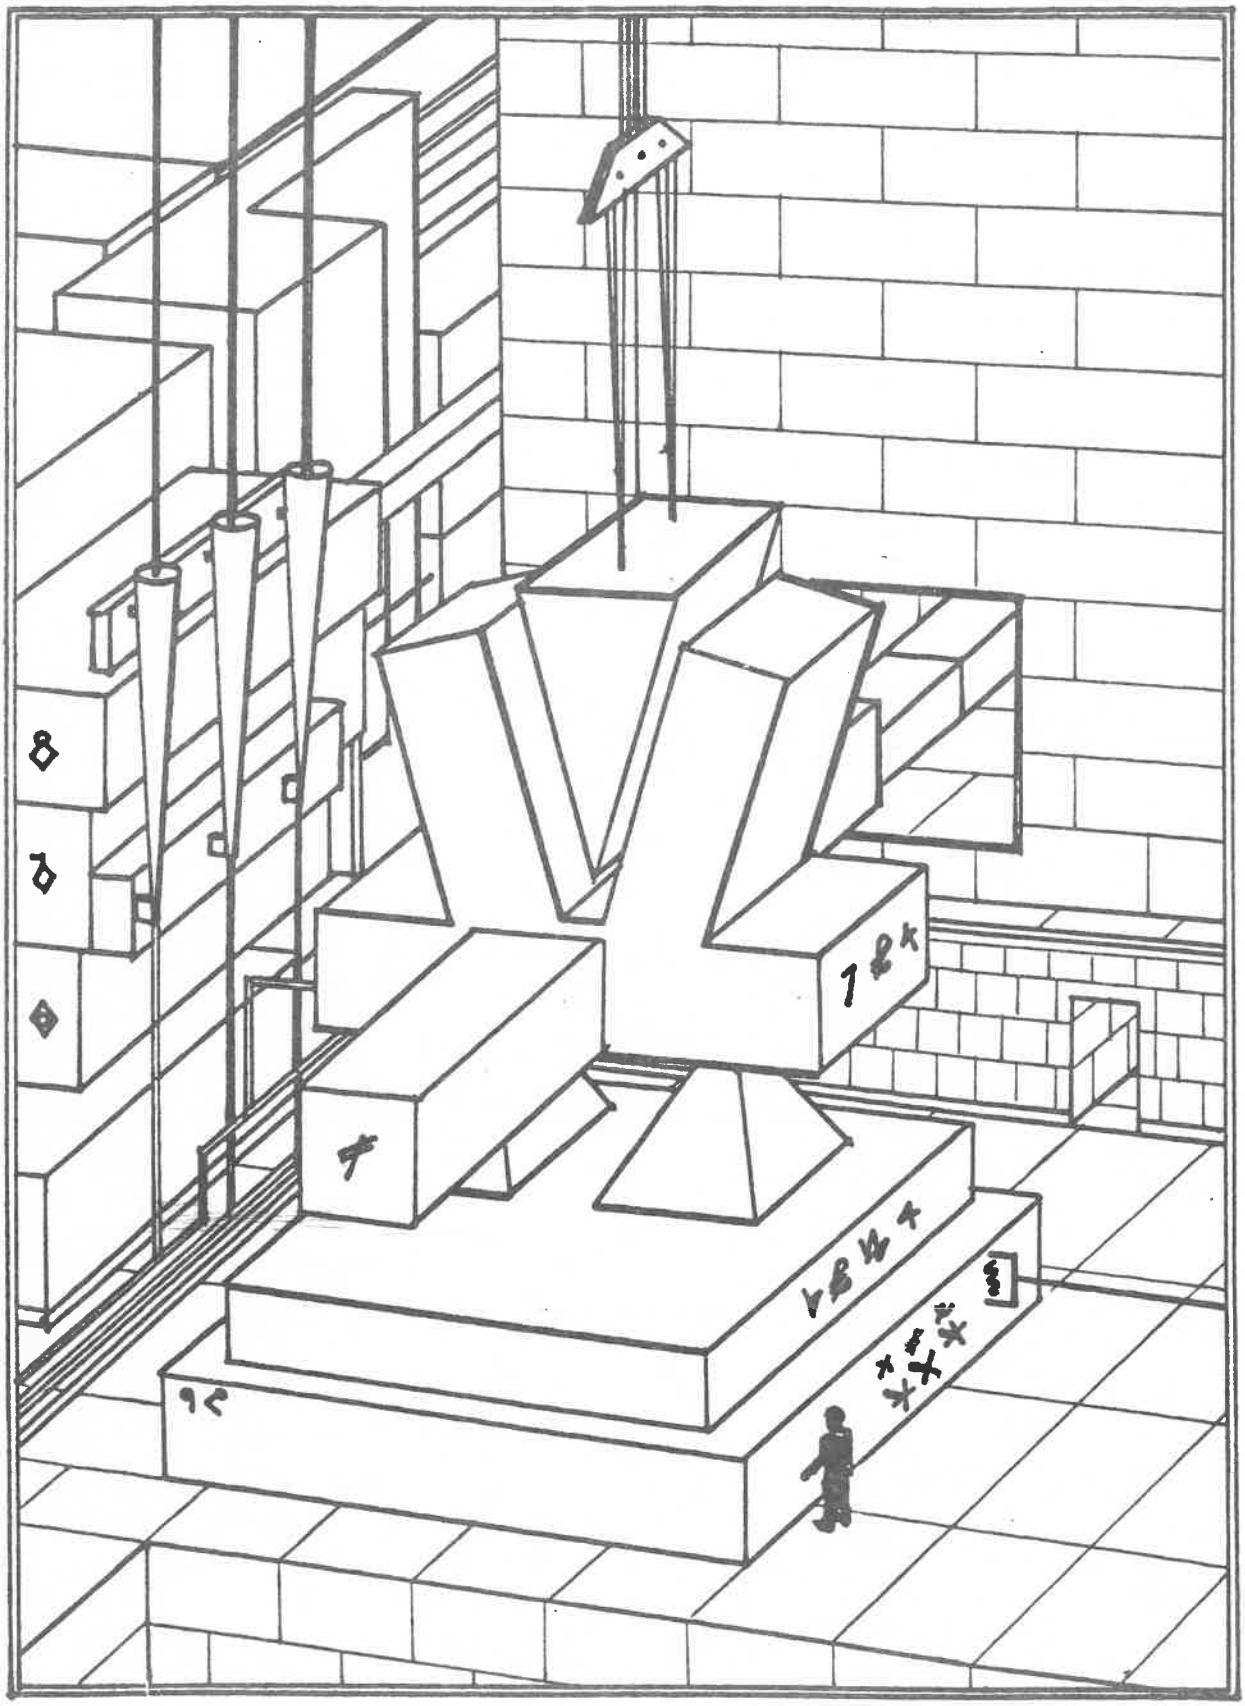
I recounted the above theory to Eone, and was told I had an over-active imagination. But he did indicate that he would consider this theory upon his return to Rin-2.

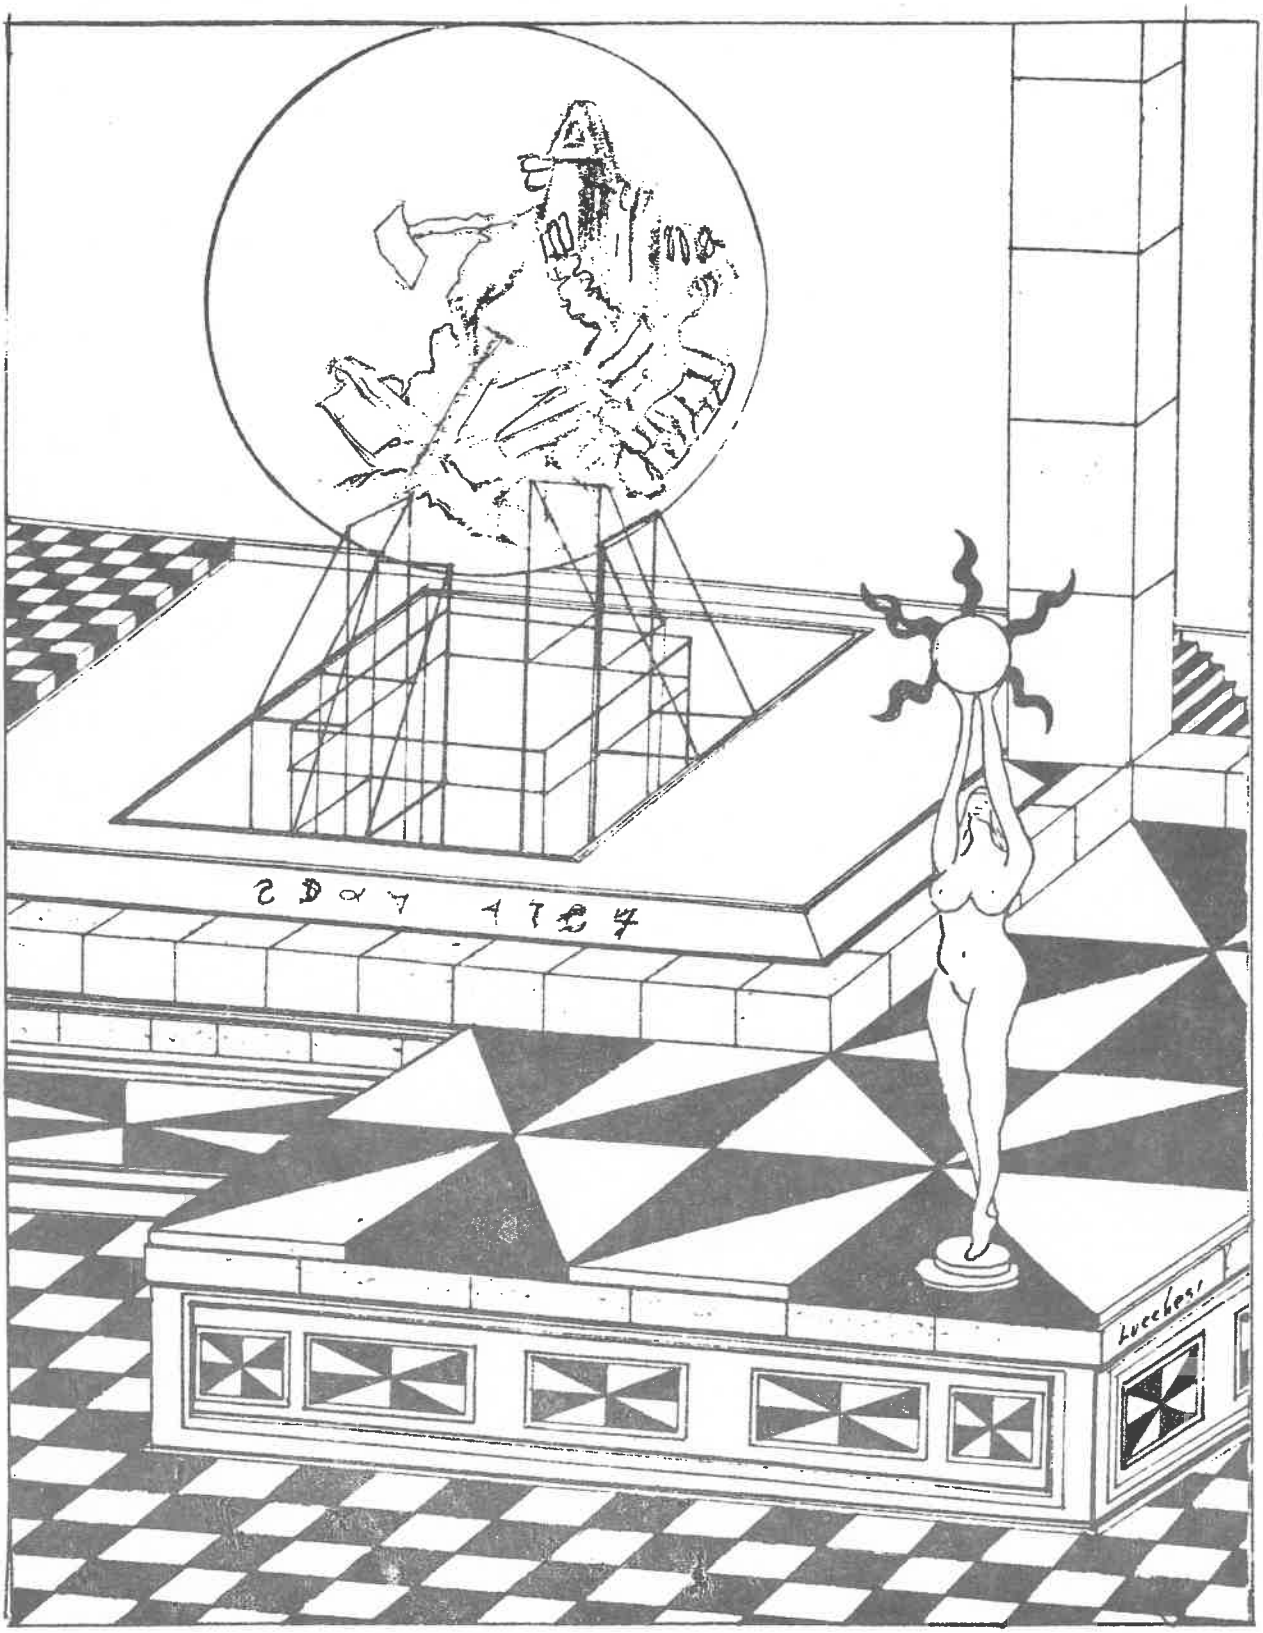
I also indicated the possibility that many of the ancient structures still intact on various parts of the globe may still be capable of resonating to energies transmitted from ancient Khoom, were it possible to activate and restore full power to the old machines. This I feel would depend upon the intergrity of the Earth Power Grid, if such a construction exists.

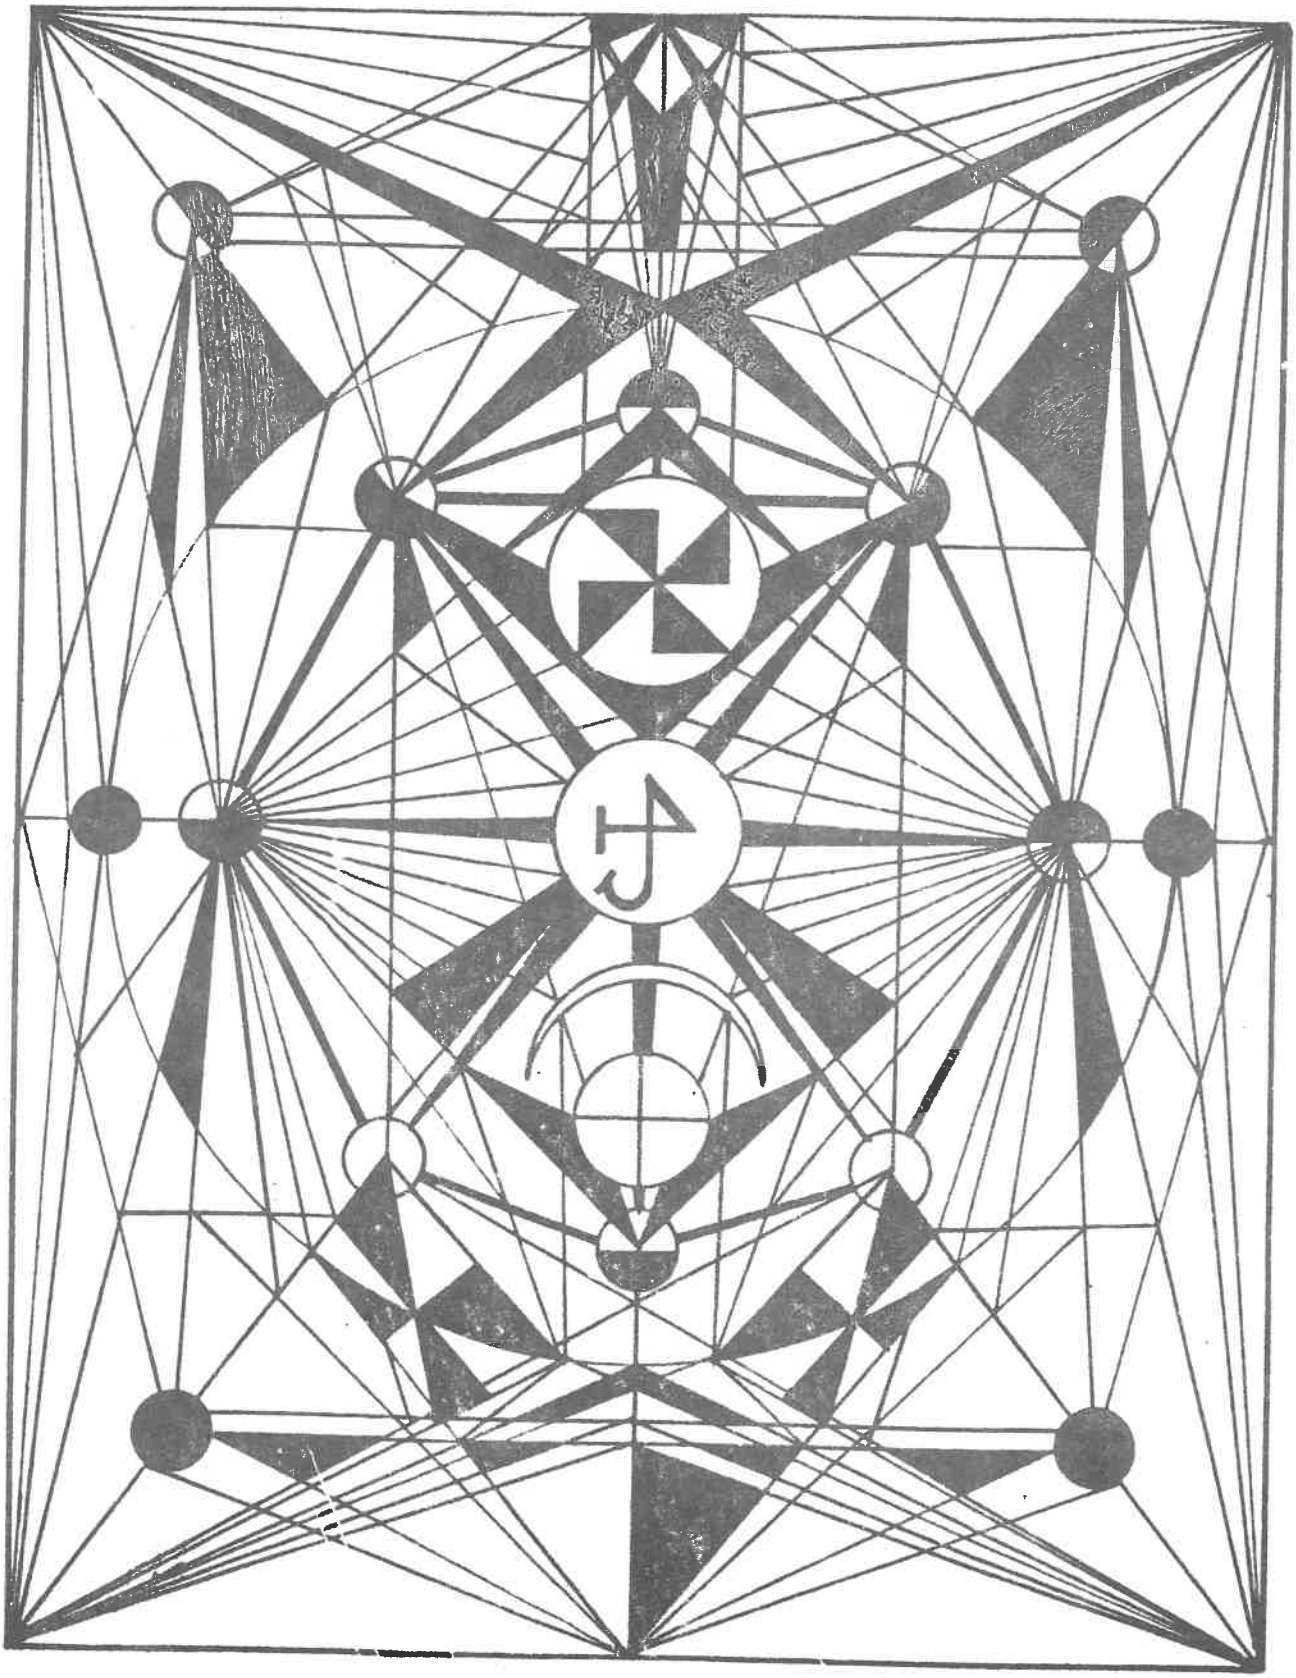
Another illustration depicts one of the subterranean power stations intact but not functioning, located in the labyrinth under the temples of Khoom, which I reconstructed from some radiation fogged photographs taken by Eone, who used my old Contax-IIIa. Were it not for his assist-

ance in filling in the details with a fine pen, I would not have been able to make any sense out of the pictures, though general outlines were visible.,

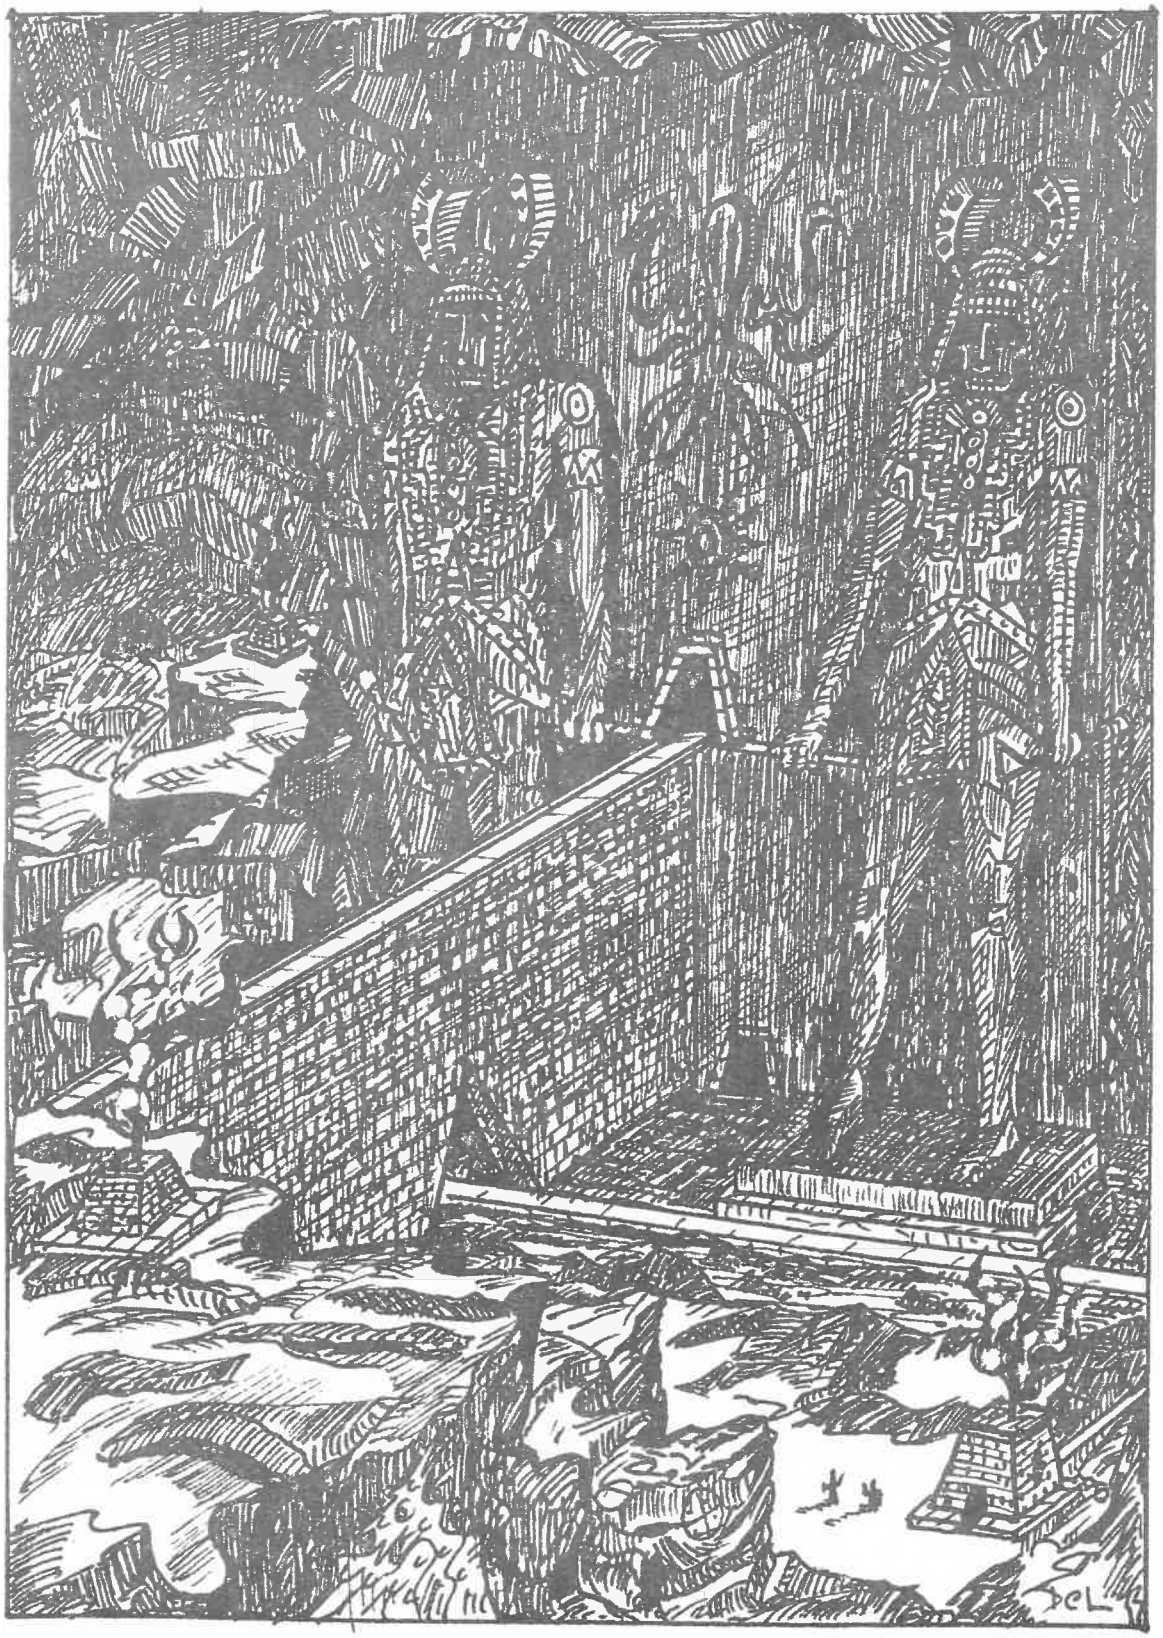
Also depicted are some type of power system schematic. The other could be an energy transfer network plan or grid (see drawing).





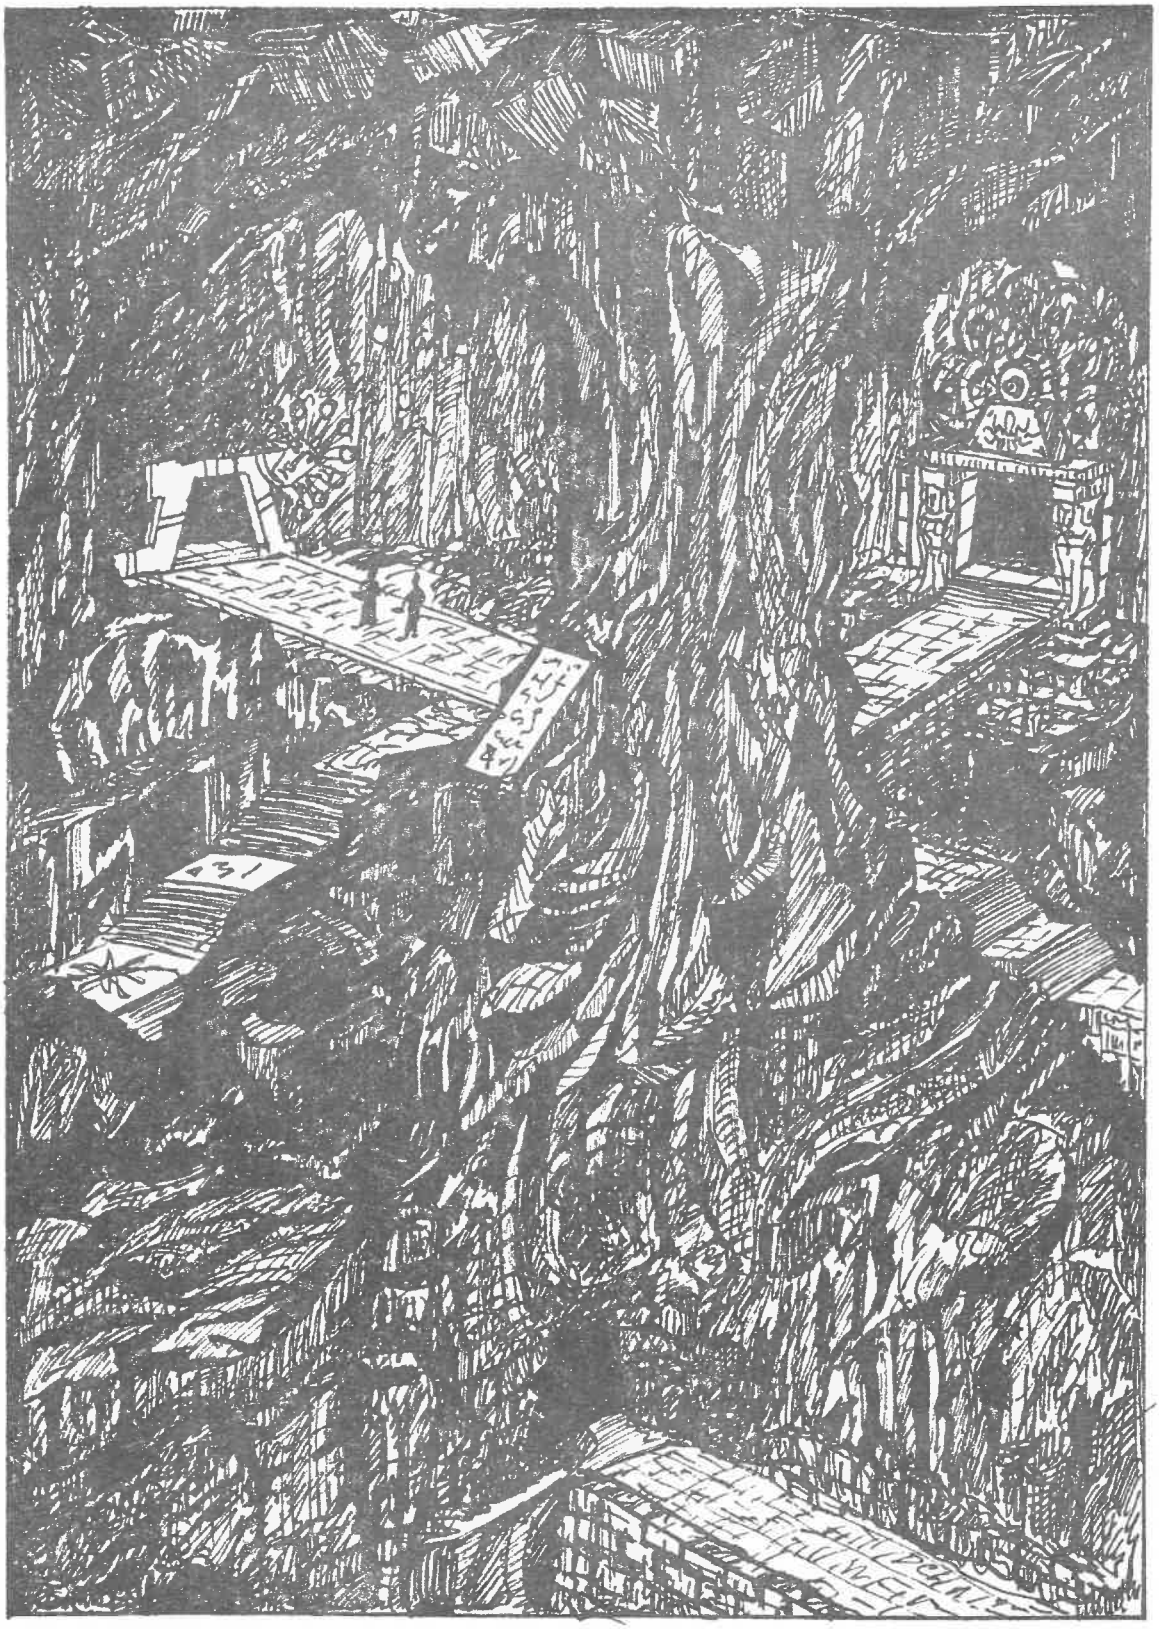


Seven hundred feet under the mountain of Khoom, the passage in the center of the sketch leads down to the 900-Ft. level, where a central chamber connects radiating tunnels which extend to the four points of the compass (See figures at bottom right of sketch for size comparison).



A five-tunnel junction under the mountain of Khoom. This section is illuminated by incandescent lamps run by motor generators installed by the technicians in Rin-2. Such areas were originally lighted by natural propane taps driven into the rocks. The supply may have run out, or somewhere in the maze a hidden valve exists that has not been discovered.

The lower tunnels lead to outside exits in the mountain. The tunnel on the upper right leads to the Ancient City above, and the upper left goes down 900 feet to the lower level of strangely constructed galleries that radiate to the four points of the compass. These galleries have been explored to a 30-mile radius, and will be explored farther in the near future.

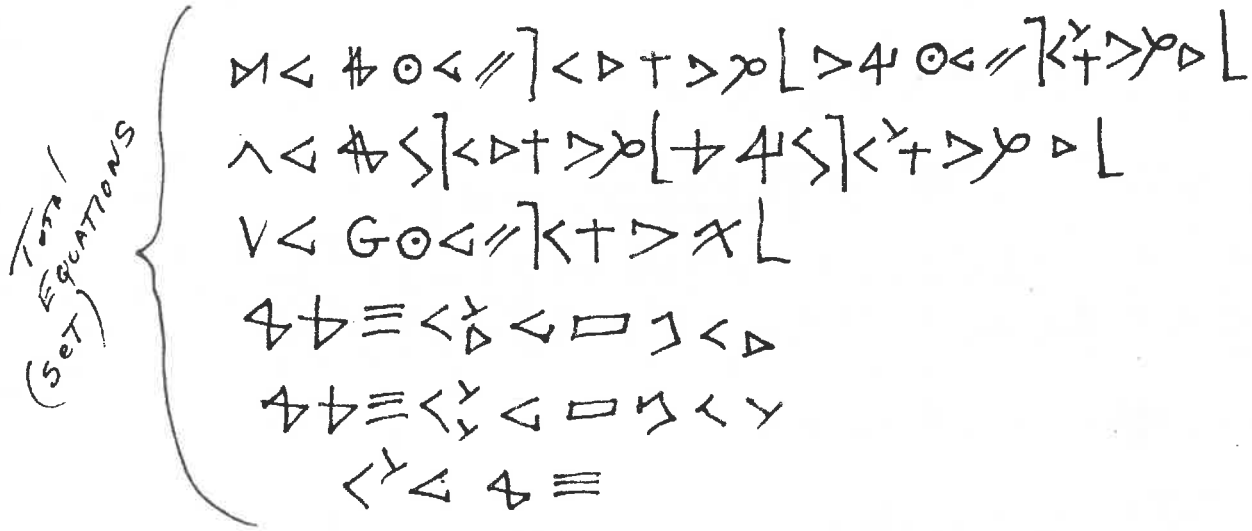


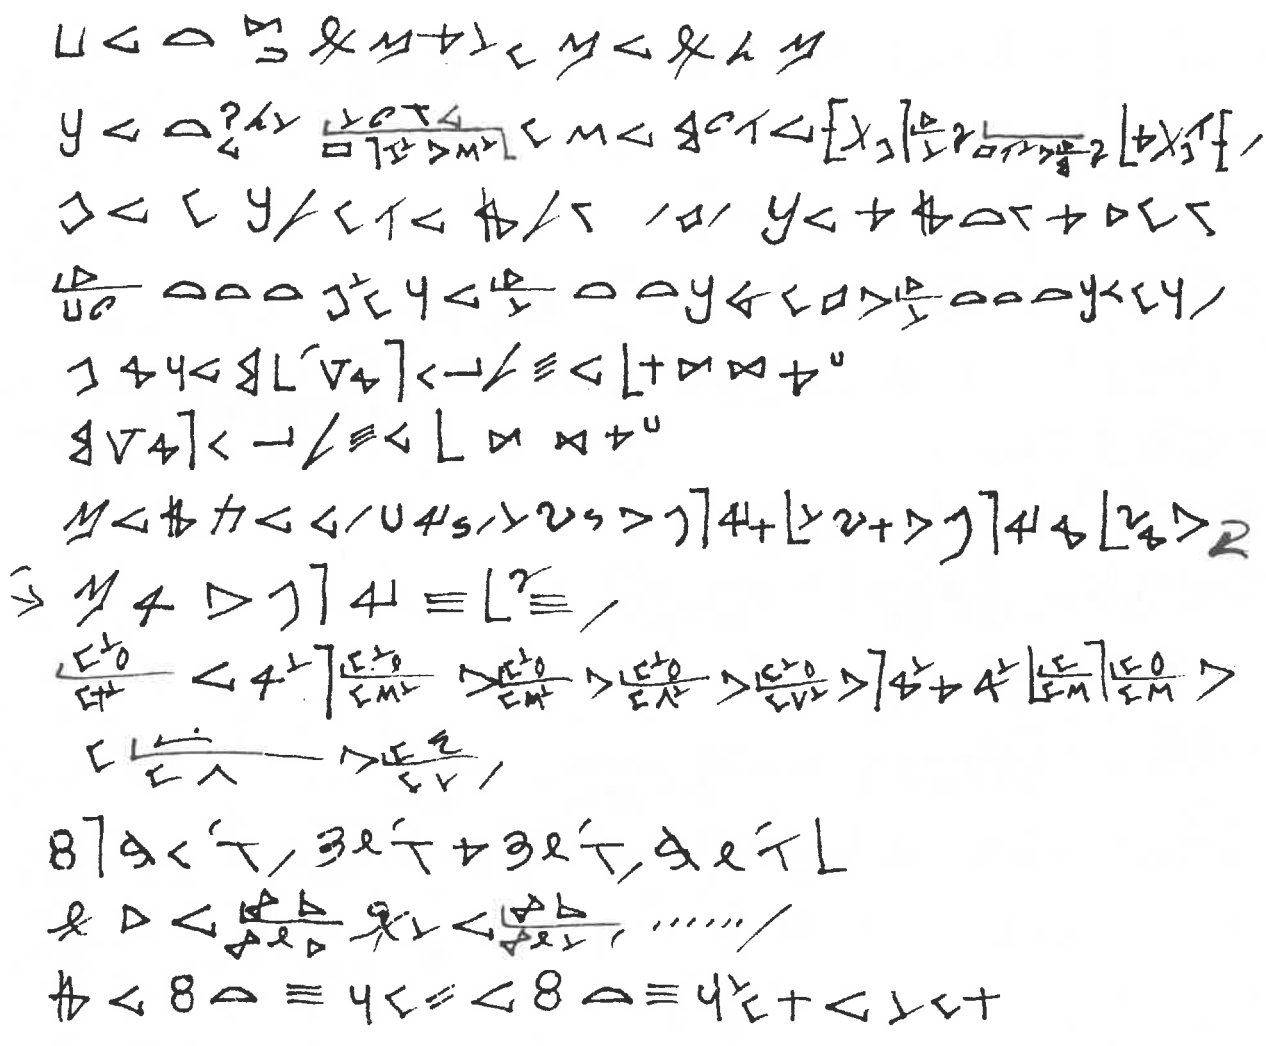
FORMULAE

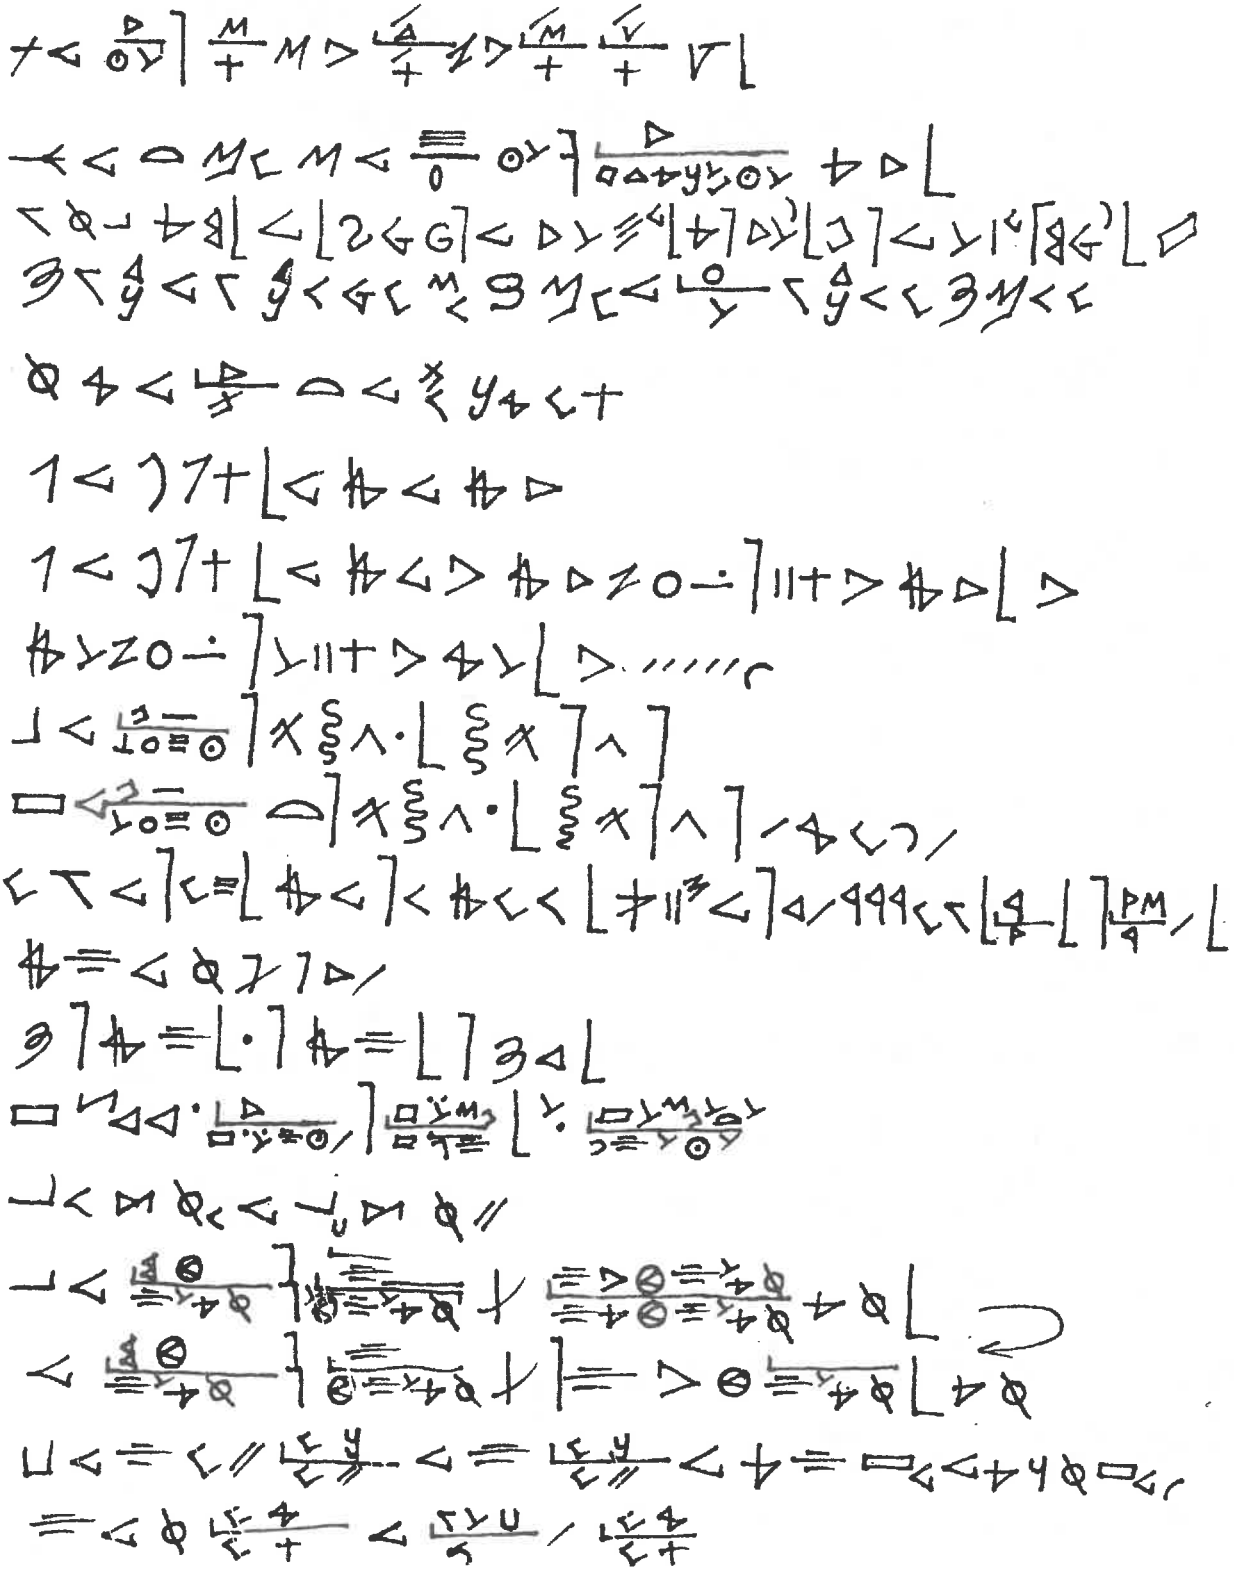
On the following pages are depicted the formulas relating to the driving systems used to drive the Sky-Craft. Although the on-board computer was not programmed to display other than Rin-2 graphics, the mathematical layout is similar to the standard 'Outside' format as used in most text-books.,

According to Eone, these equations contain the pertinent clues to the functions and forces controlled by the driving systems and could be converted to the symbols used "Outside," were engineers to apply themselves to the problem.

TOTAL EQUATIONS (SET)







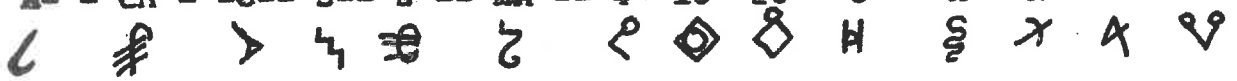
PORTABLE- MIND CONTROL DEVICE CIRCUIT

As drawn by Eone in Rin-2 Notation
All components are available on outside
in any electronic supply outlet.
The device presents certain dangers to
those not familiar with it's potential.

RIGHT-SIDE

Below is my breakdown of a few of the glyphs of Khoom.

- A- - CH - -O-- S-- E -- HA -- 4--10--20-- 0 -- X---K---P---ME---



The God of Justice in the pantheon is OGIGO (phonetic)

(I think)-------- O---G---I---G---O

Each symbol represents a concept in both the glyphs of Khoom and the glyphs of R-I-N-2. These are the ones I am fairly sure of.

Below is my evaluation of the computer writing of Rin.

Less Than------Cosine----Beta-----Nulled force-----Power----

B----E----N------R-----K----I-----W-----1----4----7----9-------

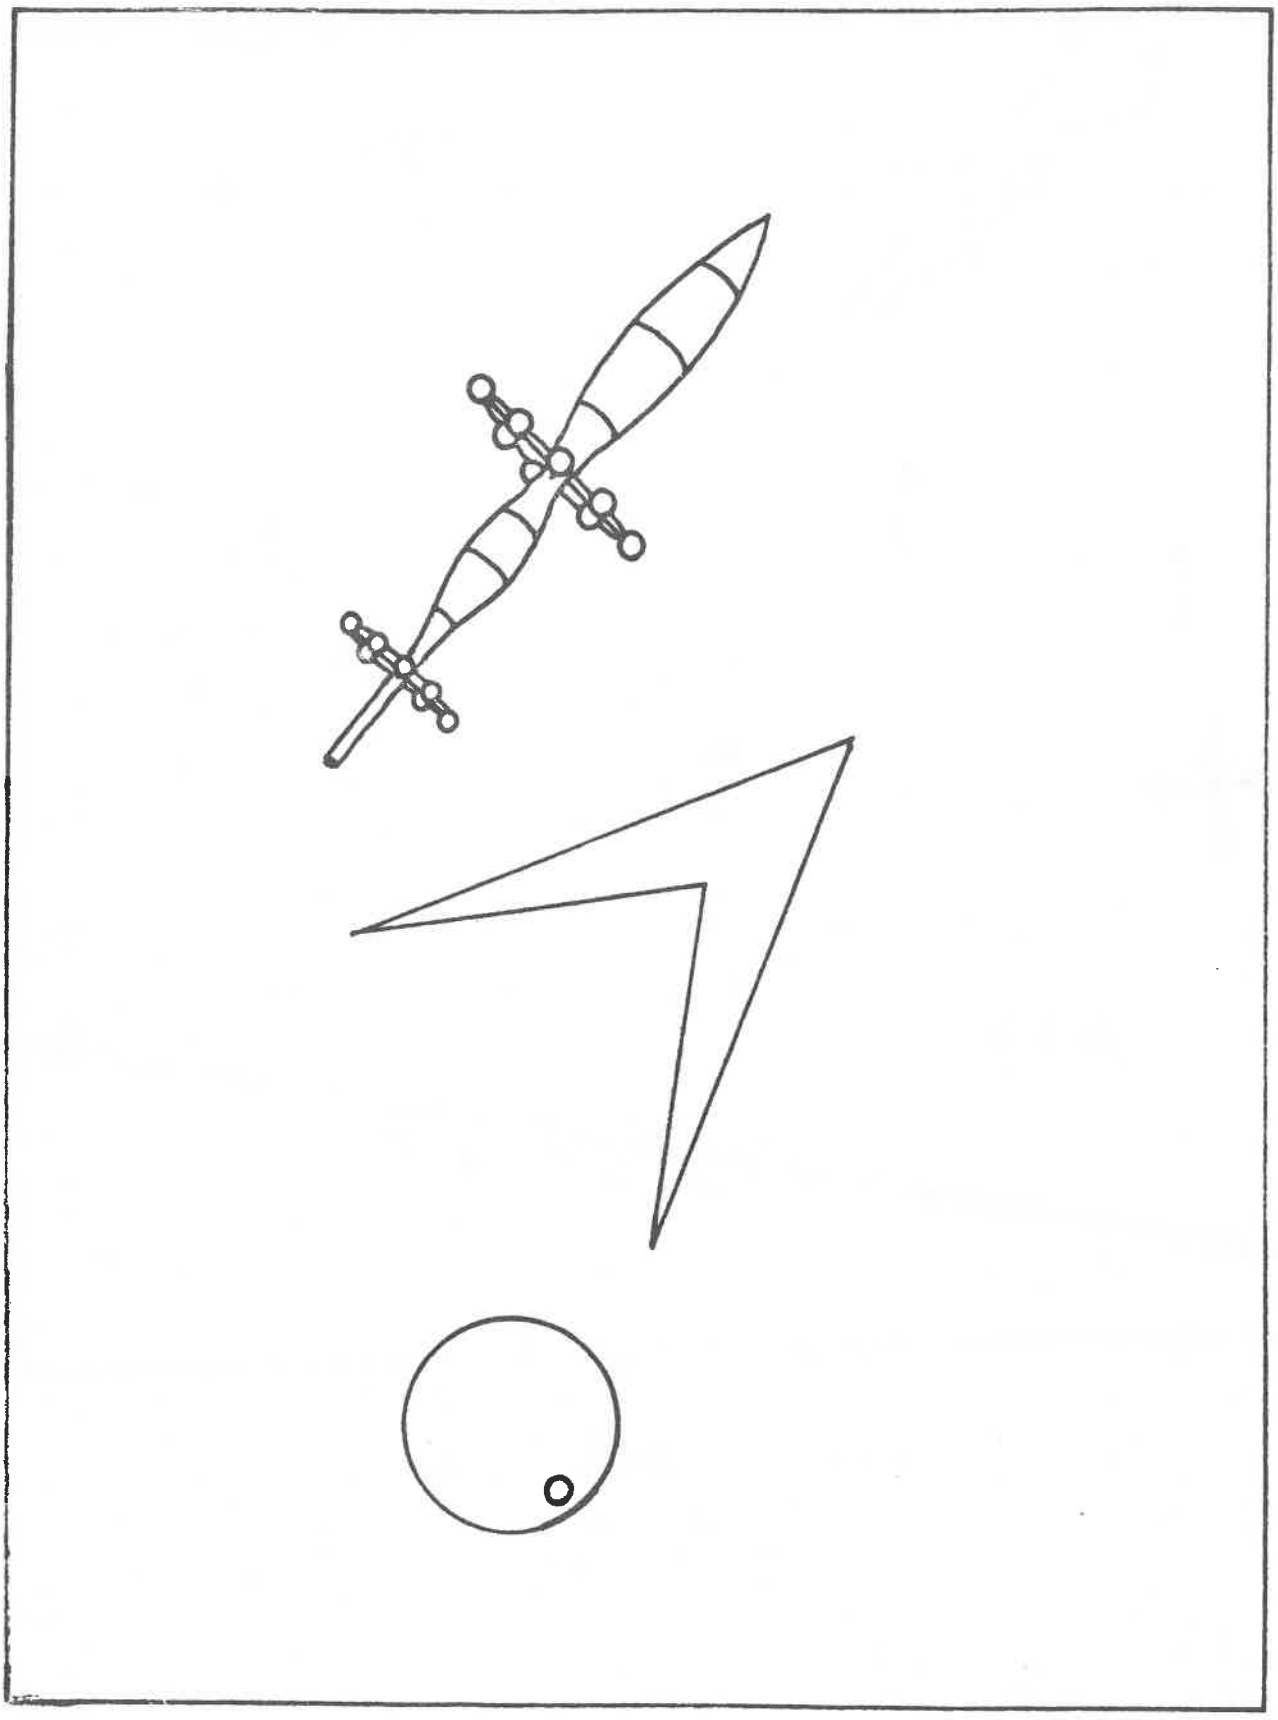
Below are arbitrary I am not sure (Rin writing)

Log-------- . ---- Minus-----Square root-------Disintegrate----

2---------10---------infinity or matrix--------- , -----

I have not determined what changes constitute the capital letters, so some of the above may be mixed.

The designs below were taken out of context and are from columns with intricate engravings in the temples of Khoom.



ENGRAVED ON A ROCK IN KHOOM

A star map?
A power mode diagram?

TAROT

I did not deem it proper to neglect the obvious similarity of the statues in the great hall of Khoom to those exhibited on many of the older tarot configurations. Appropriately the gods in the pantheon of Khoom appear to exemplify and constitute an extrapolation of the positive and negative aspects of the various forces which influence the course of our existence on this planet.

The Khoom tarot cards partially illustrated on the following page, represent a small portion. The full deck will depict all the gods in the pantheon of ancient Khoom and will incorporate in the suite of Wands illustrations of the psychotronic devices discovered in the ancient city of Khabarah Khoom.

Excerpts from old ancestral records discovered in the valley of the Serchio (Lucca, Italy), depicting the odd life style and behavior of a 10th-century aristocracy are reflected in the remaining cards, all fitting and completing the deck.

ADDENDA BY AUTHOR - (The following is excerpted from writings by the late H.T. Wilkins, author of Secret Cities of Old South America.):

In 1898 an American mining engineer named George Renford, working in the vicinity of Puno, Peru, was contacted by a representative of a Bolivian mining syndicate who was prepared to pay an extremely generous fee if he would conduct a survey in an unexplored section in the vicinity of the Cordillera _____.

Deciding to accept the offer, Renford departed. His destination was La Paz, Bolivia, where he would meet his new employers. Upon his arrival in La Paz, he was met by an employee of the syndicate and taken to the offices of the company. The next few days were spent planning the venture, the outcome of which depended on the authenticity and accuracy contained in an old map which indicated the location of large deposits of silver in an unexplored area of the Cordillera. The origin of the information contained on the old map was not revealed by the syndicate, nor would they reveal its source.

A short time later the expedition left La Paz, led by a half Spanish Serrano Indian named Vincente. A graduate of the University of San Marcos, he had spent his younger years on the fringes of the area in which the ore deposits were supposedly located. Vincente's main talent seemed to consist of an uncanny ability to pass unscathed among the many savage tribes which inhabited various territories in the back trails of Peru and Bolivia. It was rumored that Vincente was not only familiar with most tribabl customs, but that he had been initiated into their most secret rituals. Renford related that the apparent ability of Vincente to subdue the natives was due to the large gold medallion he wore suspended on a thick gold chain, and which may have represented certain gods which the natives held in superstitious awe.

Whether it was the medallion, good luck or Vincente's insight of native psychology may never be determined; upon Renford's return he declared: "We found the silver. The map is correct."

But he did not tell them that, after finding the location marked on the old map and conducting tests to verify the source of silver, he and Vincente had embarked on a private venture. They followed a trail indicated by a series of old markings carved on rocks along the trail, incised both in old Spanish and Latin, and pointing the way to a vast hoard of gold three days march in a northeast direction. The porters would not accompany them farther, complaining that they were already too close to a place called **Los Scovovon peligros del cranio**, and had been warned from childhood never to enter the area, else they would suffer **La muerte viva** (the living death).

Vincente told Renford he had heard of the legend in the past but was not certain this was the area to which it applied. Leaving the porters to await their return, they followed the instructions graven in the rocks.

Their journey proved to be a march of only two days, and ended with no golden treasure. For upon arriving at the final location indicated by the rock carvings, they found themselves standing on a bare shelf or ledge about 1200 meters in height, overlooking a valley ringed by mountains. Graven into the stone

at their feet were the old markings which Vincente read as "The end" and "Look," both under a pointer in form of a rapier which indicated direction. Their eyes followed the line which led to a mountain across the valley, directly in their line of sight, bearing an enormous rock face and housing a cavern so large that it contained the remains of an ancient city clearly visible within its confines.

No doubt each man's immediate thought was to descend to the valley floor and attempt access to the cavern, but it must be considered that they were seasoned explorers, aware of their limitations and capable of disciplined decision. They were close to the limits of their endurances and were low on provisions.

Renford's log book may contain more details, but it cannot be traced. In 1901 a box containing the book, maps and a strange gold medallion were placed in the hands of his nephew, a Mr. Miller, living at that time in Keyport, New Jersey, U.S.A., by his solicitor, not identified. No explanation was ever announced, nor does anyone know the whereabouts of Miller.

It is curious and may bear some relationship to the above that, in 1926, two freighters left from opposite coasts of the U.S., both bound for South America. They carried the nucleus of what was to become an isolated technological society. In their possession were maps indicating the way to **Los Socovon Peligros Del Cranio.** Arriving at the indicated location and failing to find access to a huge cavern, they constructed a complex beneath the base of the mountain where it is said the installation exists to this day.

(Author's note): I have read a similar report by Ray Palmer during the late 1940's, while he was editor of Amazing Stories Magazine. He claimed to have proof of the sailing times and dates of departure from both the East and West Coasts.

Palmer also hinted at the purpose of the voyages and claimed knowledge of identities of some passengers. He contended the ships were transporting people to a remote area with access to the caverns of an underground race called Dero. At that time the "Shaver Mystery" was enjoying great popularity and producing record profits for its publisher, so that one can assess a motivation for Palmer's possible application of an underground hypothesis to the exodus.

Palmer, however, may have been closer to the truth than he realized, when we consider Eone's reference (See text) to the ancient tunnels radiating in all directions deep under the mountains of Khoom, and not yet fully explored by the inhabitants of the the Rin-2 complex.

My re-drawings of a portion of the rock carvings illustrated in Renford's log book appear on the following page (or on the back cover in some bindings - Publisher). Bear in mind that these were re-drawn from a third generation copy and may have been slightly adulterated. I have also seen a sketch of the medallion worn by Vicente, taken from a faded photograph of him and Renford. Since it was not fully legible in the photograph, I have been unable to include all of the design. I have never been able to trace the gold medallion brought back to this country, but speculate that it did, indeed, belong to Vincente. -- D.C.L.
